

DIGIMARC CORP
Form 10-K
March 08, 2007

UNITED STATES SECURITIES AND EXCHANGE COMMISSION

Washington, D.C. 20549

FORM 10-K

(Mark One)

Annual Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934

For the fiscal year ended December 31, 2006

OR

Transition Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934

For the transition period from _____ to _____

Commission File Number 000-28317

DIGIMARC CORPORATION

(Exact name of registrant as specified in its charter)

Delaware
(State or other jurisdiction of
incorporation or organization)

94-3342784
(I.R.S. Employer
Identification No.)

9405 SW Gemini Drive, Beaverton, Oregon 97008
(Address of principal executive offices) (Zip Code)

(503) 469-4800

(Registrant's telephone number, including area code)

Securities registered pursuant to Section 12(b) of the Act:

Title of Each Class	Name of Each Exchange on Which Registered
Common Stock, \$0.001 Par Value Per Share	The Nasdaq Global Market

Securities registered pursuant to Section 12(g) of the Act: **NONE**

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Edgar Filing: DIGIMARC CORP - Form 10-K

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer.

Large accelerated filer Accelerated filer Non-accelerated filer

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes No

The aggregate market value of common stock, par value \$0.001 per share, held by non-affiliates of the registrant, based on the closing price for the common stock on The Nasdaq National Market on the last business day of the registrant's most recently completed fiscal second quarter (June 30, 2006), was approximately \$127 million. Shares of common stock beneficially held by each officer and director have been excluded from this computation in that such persons may be deemed to be affiliates. This determination of affiliate status is not necessarily a conclusive determination for any other purposes.

As of January 31, 2007, there were 21,342,330 shares of the registrant's common stock outstanding.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the registrant's proxy statement pursuant to Regulation 14A (the Proxy Statement) for its 2006 annual meeting of stockholders are incorporated by reference into Items 10, 11, 12, 13 and 14 of Part III of this Annual Report on Form 10-K. The registrant intends to file the Proxy Statement not later than 120 days after the end of the fiscal year covered by this Annual Report on Form 10-K.

PART I

The following discussion of Digimarc's business contains forward-looking statements relating to future events or the future financial performance of Digimarc. Digimarc's actual results could differ materially from those anticipated in these forward-looking statements. Please see the discussion regarding forward-looking statements included in this Annual Report on Form 10-K in Item 7, Management's Discussion and Analysis of Financial Condition and Results of Operations, under the caption Safe Harbor Statement under the Private Securities Litigation Reform Act of 1995.

Although Digimarc believes that the expectations reflected in such forward-looking statements are reasonable, it cannot give any assurances that these expectations will prove to be correct. Such statements by their nature involve substantial risks and uncertainties that could significantly affect expected results. Actual future results could differ materially from those described in such forward-looking statements, and Digimarc does not intend to update or revise any forward-looking statements as a result of new information, future events or otherwise. Readers are urged to carefully review and consider the various disclosures made by us which attempt to advise interested parties of the factors which affect our business, including without limitation the disclosures made in Item 7, Management's Discussion and Analysis of Financial Condition and Results of Operations, under the caption Factors Affecting Forward Looking Statements in this Annual Report on Form 10-K, the audited consolidated financial statements and related notes included in this Annual Report on Form 10-K, and other reports and filings made with the SEC.

The following discussion should be read in conjunction with our consolidated financial statements and the related notes and other financial information appearing elsewhere in this Annual Report on Form 10-K.

This Annual Report on Form 10-K includes trademarks and registered trademarks of Digimarc Corporation. Products or service names of other companies mentioned in this Annual Report on Form 10-K may be trademarks or registered trademarks of their respective owners.

ITEM 1: BUSINESS

Overview

Digimarc Corporation (Digimarc, the Company, our or we) is a leading supplier of secure identity solutions and digital watermarking technology for use in media management. Our solutions enable governments and businesses around the world to enhance traffic safety and national security, combat identity theft and fraud, facilitate the effectiveness of voter identification programs, improve the management of media content, deter counterfeiting and piracy and support new digital media distribution models that provide consumers with more choice and access to media content. Our mission is two-fold:

- Foster large-scale adoption of digital watermarking solutions licensed under the Company's intellectual property; and
- Be the most desired profitable supplier of driver license issuance systems.

We issue more than 60 million identification documents (IDs) annually and are the leading supplier of government-issued citizen IDs in North America, including supplying systems that produce more than two-thirds of all driver licenses issued in the United States (the U.S.). We are also a pioneer and leading owner of intellectual property in a signal processing technology innovation known as digital watermarking which allows imperceptible digital information to be embedded in all forms of digitally designed, produced or distributed media content, including personal identification documents, financial instruments, photographs, movies, music, television, and product packages. The embedded data within various types of media content can be detected and read by software or hardware detectors in personal computers and other digital devices.

Digital watermarking is a strategic component of nearly all of our product offerings. We provide solutions based on this technology directly and through our licensees. Digital watermarking has already proven to be a powerful differentiator in banknote security, giving rise to our long-term relationship with a consortium of leading Central Banks and many leading companies in the information technology industry. We are working to achieve a similar success in secure identity management systems. We anticipate that by the end of 2007 more than one out of two driver licenses then in production in the U.S. will carry digital watermarks as a means to provide cross-jurisdictional machine authentication. In addition, Digimarc and its licensees have successfully propagated digital watermarking in music, movies, television and radio broadcasts, images and printed materials. Digital watermarks have been used in these applications to provide improved media rights and asset management, reduce piracy and counterfeiting losses, improve marketing programs, permit more efficient and effective distribution of valuable media content, and enhance consumer experiences.

Our principal administrative, marketing, research, and intellectual property development facility is located in Beaverton, Oregon. Our secure ID systems business is headquartered in Burlington, Massachusetts, and our logistics center is in Fort Wayne, Indiana.

The substantial majority of our revenue is generated pursuant to long-term contracts with government agencies primarily U.S. state government agencies responsible for driver license issuance, a consortium of leading Central Banks, and national governments of a number of countries. These customers rely on our systems design, integration and materials science expertise, and proprietary technologies such as digital watermarking, to implement issuance systems and processes that improve the security of identity documents and banknotes.

The remainder of our revenue is generated through commercial applications of our digital watermarking and related technologies, primarily from patent and technology license fees paid by business partners. Our licensing business is built upon our extensive patent portfolio, which contains 300 issued U.S. patents as of December 31, 2006. Private sector media and entertainment industry customers use secure media management solutions from the Company and its business partners to identify, track, manage and protect content as it is distributed and consumed either digitally or physically and to enable new consumer applications to improve access to networks and information from personal computers and mobile devices. We expect that patent licensing will continue to contribute most of our revenues from non-government customers for the foreseeable future.

Financial information about geographic areas is incorporated by reference to Note 7 of our consolidated financial statements.

History

Digimarc was incorporated in 1995. The Company was founded to commercialize a signal processing innovation known as digital watermarking. Digital watermarking is a technology that allows our customers to infuse digital data into any media content that is digitally processed at some point during its lifecycle. The technology can be applied to printed materials, video, audio, and images. The inclusion of this digital data enables a wide range of improvements in security and media management, and enables new business models for distribution and consumption of media content. We use digital watermarking as a differentiator in nearly all of our product offerings and to increase value to our customers.

Banknote counterfeit deterrence was the first commercially successful use of digital watermarking. Digimarc, in cooperation with an international consortium of leading Central Banks, developed a system to deter the use of digital technologies in the unauthorized reproduction of banknotes. More recently, innovations based on the Company's digital watermarking technology and experience have been leveraged to create new products to deter counterfeiting and tampering of driver licenses and other government-issued secure credentials. In parallel, Digimarc's business partners, under patent license from Digimarc,

are delivering digital watermarking solutions to track and monitor the distribution of music, television, movies and radio to consumers.

On the heels of 9/11, we realized that our expertise in security printing and digital imaging technologies and systems placed us in a position to understand both the digital threats to identity management credentials and the environment and concerns of the issuers of these credentials. In late 2001, we acquired the Large Government Programs business unit of Polaroid Corporation (Polaroid). The primary focus of this business is the production of driver licenses and other IDs issued by government agencies. The acquired assets included all relevant software, hardware, services, materials science and distribution assets of Polaroid s government-issued photo identification business.

In this strategic acquisition, we saw a unique opportunity to assist in efforts to deter identity theft and fraud and thereby enhance transportation safety and Homeland Security through the combination of a new layer of security using our digital watermarking technology and Polaroid s expertise in secure ID solutions. The resulting business has over 50 years of experience in the delivery and operation of secure ID issuance systems, has produced more than 2 billion issued IDs, and has guided customers through numerous major upgrades and technology migrations in ID security. We are the leader in deploying new solutions to meet driver license security and related service challenges. This includes being first to:

- produce driver licenses with digital portraits,
- deploy facial recognition and State-wide fingerprint matching in 1995 and 1996,
- introduce market leading security features, including digital watermarking, Kinegrams, and secure card materials,
- produce driver licenses in secure, networked central issuance factories,
- offer driver license renewal by Internet, and
- offer a comprehensive and modular ID validation and archiving suite to address recently enacted Federal legislation, such as the federal legislation passed in May 2005 known as the REAL ID Act (the REAL ID Act). The Real ID Act imposes certain federal requirements for State-issued driver licenses. These requirements will increase the security of driver licenses, require validation of applicants prior to issuance, and mandate certain changes in business processes relating to security and the sharing and storage of data.

With increasing interest in issues surrounding Homeland Security, prevention of identity theft and fraud, traffic safety, copyright and intellectual property protection and establishment of new business models for digital distribution and use of media content, Digimarc has evolved from a technology-driven early stage company to an important supplier of critical infrastructure to government agencies and a strategic business partner to solution providers supporting the media and entertainment industry.

Customers and Business Partners

The substantial majority of our revenue is derived from long-term contracts with government agencies, primarily State driver license issuers, a consortium of leading Central Banks, and governments of various foreign countries and provinces. The retention rate for our driver license customers is high. The Company s contract with the Central Bank consortium is in its eighth year. The contract is in the second year of a 5-year extension and provides for two additional 3-year extensions that the Company expects will be exercised.

The remainder of the Company s revenue is generated through commercial applications of its digital watermarking and related technologies, primarily from patent and technology license fees paid by business partners providing media and rights management solutions to movie studios and music labels, television

and radio broadcasters, creative professionals and other customers around the world. Patent licensing is expected to continue to contribute most of the revenues from non-government customers for the foreseeable future.

Products and Services

The Company provides financial document security and secure ID solutions to government agencies:

Financial Document Security

We have a multi-year contract with an international consortium of Central Banks in which we have developed, deployed, and are supporting and continuing to enhance a system to deter digital counterfeiting of currency using personal computers and digital reprographics. Work on the system began in 1997. Details of the system are confidential for security reasons.

Secure ID Solutions

As the leading provider of government-issued secure IDs in North America, our systems produce more than 60 million driver licenses and other secure personal IDs per year. Approximately two-thirds of the U.S. States and many foreign governments, including Russia, Latvia, Mexico, Ghana and four Canadian provinces, use Digimarc secure ID solutions to issue credentials to citizens. In North America, we are generally a prime contractor, providing full issuance systems to Federal, State, and Provincial departments of motor vehicles or other government issuing authorities. Our North American driver license issuance systems vary from jurisdiction to jurisdiction. These systems are typically provided under long-term (normally five or more years) contracts. The systems provided include hardware, software, consumable supplies (such as ribbons, blank or preprinted card materials, and laminates), and on-going support necessary for a turnkey solution. They typically involve custom software and/or hardware development, integration services, and implementation services. When we provide a full issuance system to a customer, we generally retain title to all equipment, software and consumables associated with the system and are responsible for maintaining the system over the contractual period.

Digimarc offers solutions that span the entire secure ID lifecycle, including enrollment, production, secure credential designs, and post issuance inspection. The goals of the process are to:

- Verify the true identity of applicants for licenses and ID cards;
- Verify the authenticity of information and documents submitted as proof of identity;
- Verify the authenticity of information presented as proof of residency;
- Issue secure IDs that deter counterfeiting;
- Detect and facilitate investigation and prosecution of identity theft and fraud;
- Secure the issuance process from internal and supply chain fraud; and
- Provide multiple perspectives see, feel, machine validate to the end-users of issued IDs, including the police, merchants, border crossing staff, employers, government agencies, and financial institutions.

Digimarc's strategy regarding the anticipated opportunities relating to the REAL ID Act is to provide solutions that embody the key elements of the REAL ID Act: identity verification; document scanning and archiving; individual background checking; data and image sharing; and migration to and production of REAL ID Act compliant driver license documents. These solutions are available to customers as upgrades or complete issuance systems. Digimarc will also offer the States program management assistance to safely migrate to REAL ID Act compliance.

Media and Entertainment

We license our technology and patents and otherwise foster development of the market for digital watermarking-based solutions for commercial as well as governmental uses. These licenses primarily involve use of our technology and patents in the media and entertainment area. Commercial customers use secure media solutions from our business partners and us to identify, track, manage and protect content as it is distributed and consumed either digitally or physically and to enable new consumer applications to access networks and information from personal computers and mobile devices. Many movie studios, record labels, broadcasters, creative professionals and other customers rely on digital watermarking as a cost-effective means to:

- deter piracy and illegal use of movies, music and images;
- protect entertainment content from copyright infringement;
- track and monitor entertainment content for rights usage and licensing compliance;
- monitor advertisements to verify ad placement and measure return on investment; and
- enable fair and legitimate use of content by consumers.

Our business partners include Activated Content Corporation, AquaMobile, Cinea, Inc., a subsidiary of Dolby Laboratories, Inc., GCS Research LLC, MediaGrid, Mobile Data Systems, Inc., Nielsen, Royal Philips, Signum Technologies Limited, Thomson Multimedia, S.A., USA Video, Verance Corporation, Verimatrix, Inc. and VCP (an affiliate of VEIL Interactive Technologies). Although each partner addresses particular customer needs, as a whole these partners are propagating digital watermarking in music, movies, images, and television and radio as a means to improve media rights and asset management, reduce piracy losses, improve marketing programs, and provide more efficient and effective distribution of valuable media content.

Technology and Intellectual Property

The Company uses intellectual property (IP) to differentiate its products and technologies, mitigate infringement risk, and develop opportunities for licensing. Licensing of our digital watermarking and related technologies is supported by a broad patent portfolio covering a wide range of methods, applications, and system architectures.

Most of our patents relate to various methods for embedding digital information in video, audio, and images, whether the content is rendered in analog or digital formats. The digital information is generally embedded by making subtle modifications to the fundamental elements of the content itself, generally at a signal processing level. The changes necessary to embed this information are so subtle that they are generally not noticeable by people during normal use. Because the message is carried by the content itself, it is file-format independent. The message generally survives most normal compression, edits, rotation, scaling, re-sampling, file-format transformations, copying, scanning and printing.

To protect our significant efforts in creating these technologies, we have implemented an extensive intellectual property protection program that relies on a combination of patent, copyright, trademark and trade secret laws, and nondisclosure agreements and other contracts. As a result, we believe we have one of the world's most extensive patent portfolios in the field of digital watermarking, with 300 U.S. and 70 foreign issued patents and more than 500 U.S. and foreign patent applications on file as of December 31, 2006 in the areas of digital watermarking, personal identification, and related technologies. Separately, we own registered trademarks in both the U.S. and other countries and have applied for other trademarks. We continue to develop and broaden our portfolio of patented technologies, including digital watermarking and related applications and systems, and other technologies related to secure ID systems. For ID systems-related technologies, the focus of patent development has been in the areas of imaging and printing systems, card architecture and materials, and security features. Some patents relate to future product offerings or related technologies like smart cards, laser engraving and alternative card systems.

Although we devote significant resources to developing and protecting our technologies, and periodically evaluate potential competitors of our technologies for infringement of our intellectual property rights, these infringements may nonetheless go undetected or may arise in the future. We expect that infringement claims may increase as companies become more concerned with protecting their content from electronic copying.

Markets

Government

We believe that the U.S. driver license market will continue to grow as a result of broadening use of the driver license as a secure credential beyond its traditional role as evidence of competence to drive a motor vehicle; technological innovation; desire among issuers to improve security and efficiency; and new governmental regulations such as the REAL ID Act. We anticipate that these regulations may result in substantial system upgrades by our customers.

Final rules under the REAL ID Act have not yet been promulgated. As result, no significant funding has occurred under the Real ID Act, and the Federal grant process under the REAL ID Act has not yet begun. The Department of Homeland Security published draft regulations in the form of a Notice of Proposed Rulemaking on March 1, 2007. Final rules are not expected until the late spring of 2007, at the earliest.

We believe that many aspects of our driver license issuance solutions have value in other forms of credentials and secure personal identification systems. As the global market for secure personal identification solutions develops, we believe that our position as the leading supplier of government-issued citizen IDs in North America and our extensive investments in research and development provide a good foundation for participation in the global market for government programs establishing the identities of citizens and issuing associated credentials.

An example of such a potential opportunity is in the market for smart cards. We anticipate that the Western Hemisphere Travel Initiative will require that all U.S. citizens returning from outside the U.S. present either a passport or a new border PASS Card. The Federal government is currently expected to require a Radio-frequency identification (RFID) chip in each Pass Card. In other applications, the Federal government has been advancing worker identification using smart cards. In response to these moves, we recently announced a smart card option for our driver license solution, which would allow the driver license to contain an optional smart card chip to act as a border PASS Card substitute. We stand ready to provide either our traditional range of secure ID offerings, or smart cards, as driven by customer demand and adoption. We believe that these activities will position us to serve any emerging smart card

needs among driver license issuers. In addition, we will continue to look for opportunities to participate in smart card ID programs in Europe and other parts of the world where smart cards are more widely used.

Commercial

Our digital watermarking technology is used in various products and solutions affecting a variety of media objects, from movies and music, to banknotes and secure credentials. Each media object enabled by our technology creates the potential for several applications, such as:

- counterfeiting and piracy deterrence,
- media identification and management,
- authentication and monitoring,
- linking to networks,
- and enhanced services in support of mobile commerce.

We believe the market for digital watermarking applications is in the early stages of development and that existing solutions represent only a small portion of the potential market for our products, services, and technologies.

Competition

Digimarc competes for government business with system integrators, biometrics suppliers, security printers, card manufacturers, and smart card and other security technology suppliers, including companies like L-1 Identity Solutions, Inc. (formerly Viisage Technology, Inc.) (biometrics), Unisys (system integration) and De La Rue (security printer). Each of these companies is a supplier to U.S. driver license issuers. As U.S. driver licenses gain utility as general credentials and the Federal government is demanding higher security and a certain amount of standardization, competition may increase. For instance, certain aspects of the REAL ID Act may expedite an existing trend toward central issuance of driver licenses. Although the Company is proficient at central issuance, the possible acceleration of this trend could draw new competition from classic security printers such as Canadian Banknote (CBN) and Giesecke & Devrient (G&D).

The possibility of including smart card technologies in driver licenses is generating a great deal of public debate. The smart card industry is generally driven by European chip manufacturers such as Infineon and Gemalto. While successful in bank cards, mobile phone SIMs and phone cards, smart cards have only recently begun to gain distribution as government-issued credentials. The U.S. government is a strong advocate. Federal identity standards are embracing smart cards for the military, transportation workers, and government employees and contractors, and new ePassports will carry a portrait in an on-book chip. Despite considerable investment by the federal government, we believe no States have attempted or even piloted smart card driver licenses. We understand that in recent years, at least two States have expressly considered and rejected smart card driver licenses. Emerging border control and Federal traveler programs are considering smart card concepts, but have not gained traction and face privacy issues. The Company anticipates that it will be prepared to support requirements from customers for smart card technology if, and when, such requirements arise.

The Company is seeing increased interest in the U.S. ID market from large systems integrators such as EDS, IBM Global Services, Accenture, and Bearing Point. Smaller application providers are also emerging as point-product competition, including Saber and Archon.

Internationally, Digimarc supplies credentialing systems, components or supplies to numerous foreign governments, including four Canadian provinces, Latvia, Mexico, Ghana and Russia. Competition in

international markets, like in the U.S., comes from security printers, card producers, biometric companies and systems integrators, such as Sagem, De La Rue, Gemplus, Siemens Nixdorf, Unisys, and Hewlett Packard.

In media and entertainment, Digimarc and its business partners generally compete with application-specific alternative technologies for the security budget of the producers and distributors of the media objects. These alternatives include technologies and solutions based on encryption or on pattern recognition. The Company anticipates that its competitive position within certain markets may be affected by factors such as reluctance to adopt new technologies and, positively or negatively, by changes in government regulations.

Backlog

Backlog as of December 31, 2006 was approximately \$250 million. We expect more than \$85 million of this amount to be recognized as revenue during 2007. This amount includes production volumes reasonably expected to be achieved under currently effective contracts, government orders that are firm but not yet funded, and government contracts awarded but not yet signed. Backlog as of December 31, 2005 was approximately \$230 million.

There can be no assurance that our backlog will result in actual revenue in any particular period, because the orders, awards and contracts included in our backlog may be subject to modification, cancellation or suspension. We may not realize revenue on certain contracts, orders or awards included in our backlog or the timing of such recognition may change.

Employees

At December 31, 2006, we had 422 full-time employees, including 59 in sales, marketing, technical support and customer support; 84 in research, development and engineering; 88 in finance, administration, information technology and legal; and 191 in field operations, manufacturing and supply chain. We also had 32 contract workers at December 31, 2006. Our future success will depend, in part, on our ability to continue to attract, retain and motivate highly qualified technical and management personnel, for whom competition is intense. Our employees are not covered by any collective bargaining agreement, and we have never experienced a work stoppage. We believe that our relations with our employees are good.

Available Information

We make available through our website at www.digimarc.com our Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K, and amendments to these and other reports filed or furnished by us pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934 as soon as reasonably practicable after we file such materials with the Securities and Exchange Commission.

ITEM 1A: RISK FACTORS

Certain risk factors that may affect our business, financial condition, results of operation and cash flows, or that may cause our actual results to vary from the forward-looking statements contained in this Annual Report on Form 10-K are set forth in Item 7, Management's Discussion and Analysis of Financial Condition and Results of Operations, under the caption Factors Affecting Forward Looking Statements, in this Annual Report on Form 10-K.

ITEM 1B: UNRESOLVED STAFF COMMENTS

None.

ITEM 2: PROPERTIES

Our principal administrative, marketing, research, and intellectual property development facility is located in Beaverton, Oregon. Our secure ID systems business is headquartered in Burlington, Massachusetts, and our logistics center is in Fort Wayne, Indiana. Information about our office leases is set forth below.

	Square Feet	Expires
Beaverton, Oregon	46,000	August 2011
Burlington, Massachusetts	60,000	October 2010
Fort Wayne, Indiana	48,000	January 2010

We also lease sales and support offices in multiple locations throughout the United States and internationally.

ITEM 3: LEGAL PROCEEDINGS

Beginning in September 2004, three purported class action lawsuits were filed in the U.S. District Court for the District of Oregon against the Company and certain of its current and former directors and officers on behalf of purchasers of the Company's securities during the period April 17, 2002 to July 28, 2004. These lawsuits were later consolidated into one action for all purposes. The amended complaint, which sought unspecified damages, asserted claims under the federal securities laws relating to the Company's restatement of its financial statements for 2003 and the first two quarters of 2004 and alleged that the Company issued false and misleading financial statements and issued misleading public statements about the Company's operations and prospects. On August 4, 2006, the court granted our motion to dismiss the lawsuit with prejudice and entered judgment in our favor. Plaintiffs have filed a notice of appeal in the Ninth Circuit Court of Appeals. The appeal has been stayed pending the U.S. Supreme Court's determination in another case of issues relating to the Private Securities Litigation Reform Act. Due to the inherent uncertainties of litigation, the Company cannot accurately predict the ultimate outcome of the matter.

On or about October 19, 2004, two purported shareholder derivative lawsuits were filed against certain of the Company's officers and directors, naming the Company as a nominal defendant, in the Superior Court of the State of California for the County of San Luis Obispo. These lawsuits were consolidated into one action for all purposes on March 14, 2005. This suit claims that certain of these officers and directors breached their fiduciary duties to the Company's shareholders and to the Company. The complaint is derivative in nature and does not seek relief from the Company. The Board of Directors appointed an independent committee to investigate the claims asserted in this derivative lawsuit. On July 19, 2005, the court granted the Company's motion to stay these consolidated actions in favor of a shareholder derivative action to be filed by plaintiffs in the Circuit Court of the State of Oregon for the County of Washington. On August 25, 2005, the California plaintiffs filed two new derivative lawsuits in the United States District Court for the District of Oregon. On October 17, 2005, defendants filed a motion to dismiss these complaints for lack of subject matter jurisdiction and failure to state a claim. In May of 2006, the Board committee, after completing its investigation, concluded that pursuit of the allegations would not be in the best interests of Digimarc or its shareholders. On August 24, 2006, the court granted defendants' motion and dismissed the lawsuit with prejudice. Plaintiffs filed a notice of appeal on September 22, 2006. The schedule for submission of appellate briefs has not been set. Due to the inherent uncertainties of litigation, the Company cannot accurately predict the ultimate outcome of the matter.

Beginning in May 2001, a number of substantially identical class action complaints alleging violations of the federal securities laws were filed in the United States District Court for the Southern District of New York naming approximately 300 companies, including Digimarc, certain of its officers and directors, and certain underwriters of the Company's initial public offering as defendants. The complaints have since been consolidated into a single action, and a consolidated amended complaint was filed in April 2002. The amended complaint alleges, among other things, that the underwriters of the Company's initial public offering violated securities laws by failing to disclose certain alleged compensation arrangements (such as undisclosed commissions or stock stabilization practices) in the Company's initial public offering registration statement and by engaging in manipulative practices to artificially inflate the price of the Company's stock in the after-market subsequent to the Company's initial public offering. The Company and certain of its officers and directors are named in the amended complaint pursuant to Section 11 of the Securities Act of 1933, and Section 10(b) and Rule 10b-5 of the Securities Exchange Act of 1934 on the basis of an alleged failure to disclose the underwriters' alleged compensation arrangements and manipulative practices. The complaint seeks unspecified damages. The individual officer and director defendants entered into tolling agreements and, pursuant to a court order dated October 9, 2002, were dismissed from the litigation without prejudice. Furthermore, in July 2002, the Company and the other defendants in the consolidated cases filed motions to dismiss the amended complaint for failure to state a claim. The motion to dismiss claims under Section 11 was denied as to virtually all the defendants in the consolidated actions, including the Company. The claims against the Company under Section 10(b), however, were dismissed. In June 2003, a committee of the Company's board of directors conditionally approved a proposed partial settlement with the plaintiffs in this matter. In June 2004, an agreement of settlement was submitted to the court for preliminary approval. The settlement would provide, among other things, a release of the Company and of the individual defendants for the conduct alleged in the amended complaint to be wrongful. The Company would agree to undertake other responsibilities under the partial settlement, including agreeing to assign away, not assert, or release certain potential claims the Company may have against its underwriters. Any direct financial impact of the proposed settlement (other than defense costs incurred and expensed prior to May 31, 2003) is expected to be borne by the Company's insurers. The court granted the preliminary approval motion on February 15, 2005, subject to certain modifications. On August 31, 2005, the court issued a preliminary order further approving the modifications to the settlement and certifying the settlement classes. The court also appointed the Notice Administrator for the settlement and ordered that notice of the settlement be distributed to all settlement class members beginning on November 15, 2005 and completed by January 15, 2006. The settlement fairness hearing was held on April 26, 2006, but the court has not yet rendered its decision. If the court determines that the settlement is fair to the class members, the settlement will be approved. On December 5, 2006, the United States Court of Appeals for the Second Circuit issued a decision vacating the order of the United States District Court for the Southern District of New York that had granted class certification for the plaintiffs and remanded the matter for further proceedings. There can be no assurance that the proposed settlement will be approved and implemented in its current form, or at all. Due to the inherent uncertainties of litigation and the recent decision of the Court of Appeals vacating the order granting class certification, the Company cannot accurately predict the ultimate outcome of the matter.

ITEM 4: SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

None.

10

PART II**ITEM 5: MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES**

Our common stock is traded on The Nasdaq Global Market under the symbol DMRC. The closing price of our common stock on The Nasdaq Global Market was \$9.52 as of January 31, 2007. The following table lists the high and low sales prices of our common stock for the periods indicated, as reported by The Nasdaq National Market.

	Year Ended December 31,			
	2006		2005	
	High	Low	High	Low
First quarter	\$ 8.00	\$ 5.85	\$ 9.79	\$ 5.81
Second quarter	\$ 7.76	\$ 5.85	\$ 6.40	\$ 4.44
Third quarter	\$ 8.45	\$ 5.56	\$ 7.34	\$ 5.20
Fourth quarter	\$ 9.75	\$ 7.51	\$ 6.95	\$ 5.82

At February 28, 2007, there were 119 stockholders of record of our common stock, as shown in the records of our transfer agent.

We have never declared or paid cash dividends on our capital stock and we do not anticipate paying any cash dividends in the foreseeable future. We currently intend to retain future earnings, if any, to finance the future growth of our business.

The following table sets forth information regarding the Company's purchases of its equity securities during the quarter ended December 31, 2006, all of which were shares subject to restricted stock awards that we purchased from five of our executive officers to cover applicable tax withholding obligations when these awards vested.

Period	(a) Total number of shares (or units) purchased	(b) Average price paid per share (or unit)	(c) Total number of shares (or units) purchased as part of publicly announced plans or programs	(d) Maximum number (or approximate dollar value) of shares (or units) that may yet be purchased under the plans or programs
Month 1				
October 1, 2006 to October 31, 2006				
Month 2				
November 1, 2006 to November 30, 2006				
Month 3				
December 1, 2006 to December 31, 2006	23,649	\$ 8.79		
Total.	23,649	\$ 8.79		

STOCK PERFORMANCE GRAPH

Notwithstanding anything to the contrary set forth in any of the Company's previous filings under the Securities Act of 1933, as amended (the Securities Act), or the Securities Exchange Act of 1934, as amended (the Exchange Act), that might incorporate future filings, in whole or in part, the following graph shall not be deemed to be soliciting material or to be filed with the Securities and Exchange Commission, nor shall such graph be incorporated by reference into any such filings, nor shall the following graph be deemed to be incorporated by reference into any future filings under the Securities Act or the Exchange Act.

The following graph compares the performance of our common stock with the performance of (i) the Nasdaq U.S. Index, (ii) a peer group selected by the Company and (iii) the companies included in Standard Industrial Classification (SIC) Code 7373 computer Integrated Systems Design (the peer group used for purposes of the stock performance graph included in the proxy statement relating to our 2006 annual meeting of stockholders). The comparison assumes \$100 was invested on December 31, 2001 in our common stock at the closing price on such date and in each of the other three indices at the closing price on such date and assumes reinvestment of any dividends. We have changed our peer group from the companies included in SIC Code 7373 to a peer group consisting of companies within the security software and government information technology industries. We believe that the companies in the latter group are more comparable to the Company in terms of line-of-business, market capitalization, revenues, and number of employees and, therefore, comprise a more appropriate peer group for purposes of comparing stock performance. The comparisons in the graph are based on historical data and are not indicative of, nor intended to forecast, future performance of the Company's common stock.

See Note 1 to the consolidated financial statements for information regarding the reclassification of long-term deferred revenue.

ITEM 7: MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following Management's Discussion and Analysis of Financial Condition and Results of Operations contains forward-looking statements relating to future events or the future financial performance of Digimarc, which involve risks and uncertainties. Our actual results could differ materially from those anticipated in these forward-looking statements. Please see the discussion regarding forward-looking statements included in this Item 7, under the caption Safe Harbor Statement under the Private Securities Litigation Reform Act of 1995.

Although Digimarc believes that the expectations reflected in such forward-looking statements are reasonable, it cannot give any assurances that these expectations will prove to be correct. Such statements by their nature involve substantial risks and uncertainties that could significantly affect expected results. Actual future results could differ materially from those described in such forward-looking statements, and Digimarc does not intend to update or revise any forward-looking statements as a result of new information, future events or otherwise. Readers are urged to carefully review and consider the various disclosures made by us which attempt to advise interested parties of the factors which affect our business, including without limitation the disclosures made under the caption Factors Affecting Forward Looking Statements in this Item 7, the audited

consolidated financial statements and related notes included in this Annual Report on Form 10-K, and other reports and filings made with the SEC.

The following discussion should be read in conjunction with our consolidated financial statements and the related notes and other financial information appearing elsewhere in this Form 10-K.

Overview

Digimarc is a leading supplier of secure identity solutions and digital watermarking technology for use in media management. Our solutions enable governments and businesses around the world to enhance traffic safety and national security, combat identity theft and fraud, facilitate the effectiveness of voter identification programs, improve the management of media content, deter counterfeiting and piracy and support new digital media distribution models that provide consumers with more choice and access to media content.

The substantial majority of our revenue is generated pursuant to long-term contracts with government agencies primarily U.S. state government agencies responsible for driver license issuance, a consortium of leading Central Banks, and national governments of a number of foreign countries. These customers rely on our systems design, integration and materials science expertise, and proprietary technologies such as digital watermarking, to implement issuance systems and processes that improve the security of identity documents and banknotes. The remainder of our revenue is generated through commercial applications of our digital watermarking and related technologies, primarily from patent and technology license fees paid by business partners.

Secure ID Solutions

We issue more than 60 million IDs annually and are the leading supplier of government-issued citizen IDs in North America and produces more than two-thirds of all driver licenses issued in the U.S. Most of our U.S. revenue is generated through the issuance of State driver licenses and is paid in the form of a fixed price per credential issued. Our secure ID solutions typically include hardware (including specialized cameras, printers, personal computers and servers), software, consumable supplies (such as ribbons, blank or preprinted card materials and laminated and related consumables) and ongoing support services.

Seasonality. We have observed seasonality in our U.S. driver license issuance revenues, with larger revenues in the second and third quarter of the year, and generally lower revenues in the first and fourth quarters. The fourth quarter is usually the seasonally lowest quarter each year. We use the straight line method of depreciation and amortization for program-related assets. The combination of the seasonality of our revenues and straight line depreciation and amortization can cause significant variations in quarterly gross margin trends, generally increasing margins in the second and third quarters when our issuance revenues are higher and decreasing margins in the first and fourth quarters when our issuance revenues are typically lower, while having a neutral effect on a yearly basis.

International. In international markets, where we provide driver license, national identification, and voter identification systems, services, and components in partnership with local card producers, security printers, system integrators, and others, we may serve as prime contractor or sub-contractor, depending on the circumstances. As a sub-contractor, we generally are responsible for delivering hardware, software, or consumables, and some degree of integration services to the prime contractor; whereas as a prime contractor, we are responsible for integrating all components of the system to the customer's specifications.

International revenues are typically generated from sales of equipment and/or consumables to government agencies or their prime contractors. These sales may occur at irregular intervals, carry relatively low margins and cause variations in quarterly revenue and gross profit trends. We enter into low margin contracts and transactions from time to time to maintain market presence and build relationships

with customers and business partners, as often transition to more profitable digital technologies over time. Due to the nature of such international programs and customers, the timing of these sales is less predictable than our service revenues provided by domestic customers and, consequently, international sales can occur unevenly during the course of a year.

Backlog. Based on projected government-issued credential production volumes and other commitments we have for the periods under contract with our respective customers, we anticipate our current contracts as of December 31, 2006 will generate approximately \$250 million in revenue during the contractual terms of such contracts, currently up to seven years. We expect more than \$85 million of this amount to be recognized as revenue during 2007. This amount includes production volumes reasonably expected to be achieved under currently effective contracts, government orders that are firm but not yet funded, and government contracts awarded but not yet signed. Backlog as of December 31, 2005 was approximately \$230 million.

Some factors that lead to increased backlog are:

- Competitive bid wins,
- Renewals with current customers,
- Add-on sales to current customers, and
- Contracts with longer contractual periods replacing contracts with shorter contractual periods.

Some factors that lead to decreased backlog are:

- Recognition of revenue associated with backlog currently in place,
- Low bid activity,
- Contracts with shorter contractual periods replacing contracts with longer contractual periods, and
- The revenue model utilized for a particular customer (e.g., a price-per-card model with a large associated backlog vs. a hardware and consumables model with a small associated backlog).

The mix of these factors, among others, dictates whether our backlog increases or decreases for any given period. For example, during the year ended December 31, 2006, we had a high level of awards and extensions, and as a result we have increased our backlog during the year. Over the next year or so, we anticipate several States to request bids or negotiate extensions on their driver license issuance system programs. This period of expected high bid and potential extension activity could lead to additional backlog if we are successful with our bids. Another example is our variable revenue model. From time to time we have sales to our customers that are not characteristic of our price-per-card model, but instead included hardware and consumable sales. Although these types of revenue models are positive growth indicators for our business, they can lead to lower reported backlog.

There can be no assurance that our backlog will result in actual revenue in any particular period, because the orders, awards and contracts included in our backlog may be subject to modification, cancellation or suspension. We may not realize revenue on certain contracts, orders or awards included in our backlog or the timing of such recognition may change.

Depreciation. Starting January 1, 2006, we changed our policy for depreciating fixed assets that were specifically used to provide services under long-term contracts to the shorter of the original contract term plus 2.75 years or estimated useful life. Through December 31, 2005, we depreciated these assets over the shorter of the original contract term or estimated useful life. This change in estimate was supported by an analysis we completed during the first quarter of 2006 which showed that historically 95% of contracts were extended beyond the original contract term, that the average contract had at least two contract

extensions during its life and that these extensions added on average 2.75 years to the length of the contracts' original terms.

Since contract-specific program assets are tracked on a contract basis, the finding that contracts are routinely extended beyond the original term and that these extensions are not generally accompanied by significant incremental capital investment indicates that the useful life of contract-related assets is generally longer than the original term of the contract. Given these findings, we concluded that it was appropriate to change the estimated useful lives of these assets for purposes of depreciation. In addition, the change in useful lives achieves a better matching of the utility of these assets with the resulting revenues. For the year ended December 31, 2006, we performed an updated analysis on contract specific assets which resulted in no change to our previous conclusions. We will continue to analyze the useful lives of contract specific assets in future periods. The financial impact of this change is discussed below in the Cost of Revenue.

Restructuring

During the last half of 2005 and continuing during 2006, the Company restructured its operations to improve productivity and reduce fixed costs. During the second quarter of 2006 we accelerated those activities significantly, resulting in a reduction of our workforce by nearly 20%. Overall, our workforce was reduced by over 30% since mid 2005. Our actions included the redeployment and reallocation of resources to better align with our operating strategies. The discussion and analysis of our operations presented below reflects the improvement in the operating results for the year ended December 31, 2006 as compared to the year ended December 31, 2005.

Critical Accounting Policies and Estimates

The preparation of consolidated financial statements in accordance with accounting principles generally accepted in the U.S. (U.S. GAAP) requires us to make estimates and judgments that affect the reported amounts of assets, liabilities, revenue and expenses, and related disclosure of contingent assets and liabilities. On an on-going basis, we evaluate our estimates, including those related to bad debts, inventories, intangible assets, income taxes, restructuring, long-term service contracts, warranties, investments, and contingencies and litigation. We base our estimates on historical experience and on various other assumptions we believe to be reasonable under the circumstances. Actual results may differ from these estimates under different assumptions or conditions.

Certain of our accounting policies require higher degrees of judgment than others in their application. These include revenue recognition on long-term service contracts, impairments and estimation of useful lives of long-lived assets, inventory valuation, reserves for uncollectible accounts receivable, and contingencies and litigation. We believe the following critical accounting policies affect our more significant judgments and estimates used in the preparation of our consolidated financial statements:

Revenue recognition on long-term service contracts: We recognize revenue on long-term identification and driver license production contracts using primarily a price-per-card method. We use actual monthly volume amounts, if available, or we estimate the card production volume on a monthly basis for certain of these contracts in order to recognize revenue earned during the period. In the case of estimates, when the actual production information becomes available, which is typically within four weeks, we bill the customer accordingly and any differences from the estimates are recognized in the month the billing occurs. These amounts represent our best estimates of cards produced and are based on historical trends, known events during the period, and discussions with contract representatives. Prior to publicly reporting results, our practice is to compare the actual production volumes to estimated production volumes and adjust revenue amounts as necessary. Any estimated amounts are included in unbilled receivables on the balance sheet until the actual production

information is available and the billing occurs. Any estimation process involves inherent risk. We reduce the inherent risk relating to production estimation through our approval and monitoring processes related to accounting estimates. We also evaluate contracts for multiple elements and account for these items under the appropriate accounting literature.

Revenue from professional services arrangements is generally determined based on time and material or a cost plus a profit margin measure. Revenue for professional services is recognized as the services are performed. Losses on contracts, if any, are provided for in the period in which the loss becomes determinable. Billing for services rendered generally occurs within one month following when the services are provided. Revenue earned which has not been invoiced is classified as unbilled trade receivables, which is included in the balance of trade accounts receivable, net in the consolidated balance sheets.

Impairments and estimation of useful lives of long-lived assets: We periodically assess long-lived assets for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable, in accordance with the provisions of Statement of Financial Accounting Standards (SFAS) No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*. This statement requires that long-lived assets and certain identifiable intangibles be reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Recoverability of assets to be held and used is measured by a comparison of the carrying amount of an asset to future net undiscounted cash flows expected to be generated by the asset. If such assets are considered to be impaired, the impairment to be recognized is measured by the amount by which the carrying amount of the assets exceeds the fair value of the assets. Fair value is determined based on discounted cash flows or appraised values, depending on the nature of the asset. Also, we periodically review the useful lives of long-lived assets whenever events or changes in circumstances indicate that the useful life may have changed. If the estimated useful lives of such assets do change, we adjust the depreciation or amortization period to a shorter or longer period, based on the circumstances identified.

Inventory valuation: Inventory consists primarily of consumable supplies that are used in the production of driver licenses and products held for resale to customers. We value inventory at the lower of cost or market value (which lower amount is the net realizable value). We reduce the value of our inventory for estimated obsolescence or unmarketable inventory equal to the difference between the cost of inventory and the estimated market value based upon assumptions about future demand and market conditions. If actual market conditions are less favorable than those projected by management, additional inventory write-downs may be required.

Reserves for uncollectible accounts receivable: We maintain allowances for doubtful accounts for estimated losses resulting from the inability of our customers to make required payments. We determine the allowance based on historical write-off experience and current information. We review, and adjust when appropriate, our allowance for doubtful accounts on at least a quarterly basis. If the financial condition of our customers were to deteriorate, resulting in an impairment of their ability to make payments, additional allowances may be required.

Contingencies and Litigation: We periodically evaluate all pending or threatened contingencies or commitments, if any, that are reasonably likely to have a material adverse effect on our operations or financial position. We assess the probability of an adverse outcome and determine if it is remote, reasonably possible or probable as defined in accordance with the provisions of SFAS No. 5, *Accounting for Contingencies*. If information available prior to the issuance of our financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of our financial statements, and the amount of the loss, or the range of probable loss can be reasonably estimated, then such loss is accrued and charged to operations. If no accrual is made for a

loss contingency because one or both of the conditions pursuant to SFAS No. 5 are not met, but the probability of an adverse outcome is at least reasonably possible, we will disclose the nature of the contingency and provide an estimate of the possible loss or range of loss, or state that such an estimate cannot be made.

Stock-based compensation: On January 1, 2006, we adopted *SFAS No. 123(R)*, Share-Based Payment (Revised 2004), which requires the measurement and recognition of compensation for all stock-based awards made to employees and directors including stock options and employee stock purchases under a stock purchase plan based on estimated fair values. Under SFAS 123(R), we use the Black-Scholes option pricing model as our method of valuation for stock-based awards. Our determination of the fair value of stock-based awards on the date of grant using an option pricing model is affected by our stock price as well as assumptions regarding a number of highly complex and subjective variables. These variables include, but are not limited to, the expected life of the award, our expected stock price, volatility over the term of the award and actual and projected exercise behaviors. Although the fair value of stock-based awards is determined in accordance with SFAS 123(R), the Black-Scholes option pricing model requires the input of highly subjective assumptions, and other reasonable assumptions could provide differing results.

Results of Operations

The following table presents our consolidated statement of operations data for the periods indicated as a percentage of total revenue.

	Year Ended December 31,		
	2006	2005	2004
Revenue:			
Service	82 %	84 %	80 %
Product and subscription	18	16	20

Provision for income taxes			
Net income (loss)	(11)%	(23)%	(10)%

Years Ended December 31, 2006 and 2005

Revenue

	Twelve Months Ended December 31,		Dollar	Percent
	2006	2005	Increase (Decrease)	Increase (Decrease)
	(in 000 \$)			
Revenue:				
Service	\$ 85,681	\$ 84,691	\$ 990	1 %
Product and subscription	18,566	16,362	2,204	13 %
Total	\$ 104,247	\$ 101,053	\$ 3,194	3 %
Revenue (as % of total revenue):				
Service	82%	84%		
Product and subscription	18%	16%		
Total	100%	100%		

Service. Service revenue consists primarily of:

- card production on a price-per-card basis,
- software development services, and
- hardware and software maintenance.

The majority of service revenue arrangements are typically structured as price-per-card product agreements, time and materials consulting agreements, or fixed price consulting agreements.

Service revenue increased primarily due to increased program work from the consortium of central banks, increased production for certain programs that reached full production in 2006 including programs for state driver license issuers in Florida and Alabama. These increases in service revenue were offset by decreased revenue from the Mexico program due to a hiatus before national elections, changes in driver license renewal terms in California and Massachusetts, and the completion of our contract with West Virginia.

Product and subscription. Product revenue consists primarily of the sale of equipment and consumables related to identification card production systems and software licenses that are variable in nature and occur from time to time. Subscription revenue consists primarily of royalty revenue from our intellectual property licenses and the sale of our web-based subscriptions related to various software products, both of which are more recurring in nature.

Product and subscription revenue increased primarily from the addition of three large international programs with Yemen, Ghana and Russia, related to either new ID programs or increased volume of consumable sales. The product and subscription revenue was offset by decreased revenue from certain domestic customers due to lower hardware sales in 2006.

Revenue by Geography

	Twelve Months Ended December 31,		Dollar Increase (Decrease)	Percent Increase (Decrease)
	2006 (in 000 \$)	2005		
Revenue by geography:				
Domestic	\$ 83,161	\$ 80,119	\$ 3,042	4 %
International	21,086	20,934	152	1 %
Total	\$ 104,247	\$ 101,053	\$ 3,194	3 %
Revenue (as % of total revenue):				
Domestic	80%	79%		
International	20%	21%		
Total	100%	100%		

The increase in domestic revenue was primarily due to increased revenue from the state driver license issuers in Florida and Alabama as these programs reached full production levels, offset by lower production revenues in West Virginia, lower hardware sales in Ohio and certain other States that occurred as a result of normal fluctuations in issuance volumes that we may experience from time to time.

The slight increase in international revenue was primarily due to increased revenue from Yemen, Ghana and Russia related to either new ID programs or an increase in consumable sales. These increases are not expected to continue in a linear manner or recur at regular intervals. The increase in international revenue was offset by reduced revenue from our Mexico program due to a hiatus before national elections and decreased product sales to Honduras.

Cost of Revenue

	Twelve Months Ended December 31,		Dollar Increase (Decrease)	Percent Increase (Decrease)
	2006 (in 000 \$)	2005		
Cost of Revenue:				
Service	\$ 60,817	\$ 61,465	\$ (648)	(1)%
Product and subscription	7,952	6,707	1,245	19 %
Total	\$ 68,769	\$ 68,172	\$ 597	1 %
Cost of Revenue (as % of related revenue components):				
Service	71%	73%		
Product and subscription	43%	41%		

Service. Cost of service revenue primarily includes:

- costs of consumables used in delivering a service,
- compensation for software developers, quality assurance personnel, product managers, field operations personnel, business development personnel and outside contractors,
- depreciation charges for machinery, equipment and capitalized software,
- deployment costs used specifically for service delivery,
- provisions for obsolete and excess inventories,
- travel costs directly attributable to service and development contracts,

- stock based compensation expense, and
- charges for infrastructure and centralized costs.

Cost of service revenue decreased primarily due to:

- decreased depreciation expense, net of \$3.4 million, as a result of the estimated decrease of \$8.0 million attributable to the change in estimated useful lives of program assets as of December 31, 2005, as discussed below, offset by an increase of \$4.6 million related to programs that were deployed in 2005 and for which we realized a full year of depreciation in 2006 and an increase in depreciation attributable to upgrades made to certain other programs,
- decreased contract and temporary labor of \$2.6 million as part of the cost cutting initiative where a number of contractors were converted to employees at lower average costs,
- decreased other operating expenses such as small tools and repairs and maintenance of \$0.7 million related to cost cutting initiatives, offset by
- increased employee compensation-related expenses of \$5.7 million resulting from:
 - converting contract labor to permanent labor at a lower average cost per person,
 - redeploying resources to program activities as part our restructuring initiative undertaken throughout the year,
 - allocating resources to fixing or improving existing programs, rather than to capital projects relating to the development of new programs, which occurred primarily during the first half of the year,
- increase in stock option expense related to the adoption of SFAS 123(R) regarding stock-based compensation as discussed below, and
- increased allocated infrastructure and centralized costs of \$0.9 million primarily due to system upgrades and enhancements in our information technology operations.

Product and subscription. Cost of product and subscription revenue primarily includes costs of equipment and consumables related to our ID production systems, as well as Internet service provider connectivity charges and image search data fees to support the services offered to our subscription customers.

Cost of product and subscription revenue increased primarily due to:

- increased direct consumable costs related to three international customers of \$2.5 million, offset by
- lower direct hardware costs related to a domestic customer of \$1.8 million.

Edgar Filing: DIGIMARC CORP - Form 10-K

The costs components included in our cost of revenue are comprised of three categories as described below:

	Twelve Months Ended December 31, 2006 (in 000 \$)	2005	Dollar Increase (Decrease)	Percent Increase (Decrease)
Cost of revenue:				
Variable	\$ 29,145	\$ 28,083	\$ 1,062	4 %
Fixed field support and manufacturing	28,972	25,997	2,975	11 %
Program depreciation	10,652	14,092	(3,440)	(24)%
Total	\$ 68,769	\$ 68,172	\$ 597	1 %
Cost of revenue (as % of total revenue):				
Variable	28%	28%		
Fixed field support and manufacturing	28%	26%		
Program depreciation	10%	14%		
Total	66%	68%		

Variable costs include:

- price of materials and labor to produce an identification card,
- direct costs of hardware and software delivered, and
- other costs that are variable in nature.

While the variable cost as a percentage of revenue remained the same, the increase in variable costs is primarily due to the increase in sales of consumables and product sales to our international customers.

Fixed field support and manufacturing includes:

- field operations and support,
- manufacturing,
- supply chain costs, and
- charges for infrastructure and centralized costs.

These costs are considered fixed with respect to supporting current contracts. As new contracts are entered into and delivered, the overall level of fixed costs increases. The increase in fixed costs are primarily due to newer contracts requiring additional headcount, as well as travel costs to support them. During the first two quarters of the fiscal year, we focused on improving certain existing programs and as a result fewer expenditures were capitalized to the balance sheet. As a result of these actions, fixed support costs increased. After improving the efficiencies in these programs, our fixed costs returned to more normal levels during the second half of the year.

Program depreciation primarily consists of amortization and depreciation of costs incurred during the delivery process, where such costs are capitalized and then amortized or depreciated over the useful lives of the assets to which the costs relate. Program depreciation decreased in relation to the other components of cost of revenue primarily due to the change in the estimated useful lives of program-related fixed assets.

Edgar Filing: DIGIMARC CORP - Form 10-K

The following table shows the effect of this policy of reducing depreciation expense in 2006 for assets in place at December 31, 2005, as well as the expected effect in the future periods specified:

	Q1 2006 (in 000 \$)	Q2 2006	Q3 2006	Q4 2006	2006	2007	2008
Previous estimated depreciation	\$ 4,540	\$ 4,464	\$ 4,177	\$ 4,199	\$ 17,380	\$ 16,067	\$ 14,911
Updated estimated depreciation	2,394	2,369	2,315	2,298	9,376	9,787	10,788
Reduction in depreciation expense	\$ 2,146	\$ 2,095	\$ 1,862	\$ 1,901	\$ 8,004	\$ 6,280	\$ 4,123

For the year ended December 31, 2006, the change in estimating the useful lives of program-related fixed assets had the effect of reducing depreciation expense by \$8.0 million and increasing basic and diluted earnings per share by \$0.39. Given that the depreciation expense attributed to contract-specific assets is included in cost of revenue, the decrease in depreciation expense also caused gross margins to increase by the amount of the reduction in depreciation expense.

The primary factor offsetting the reduction in program depreciation was higher than average costs to deploy certain new programs where we provided a complete system replacement using advanced technologies. These programs were completed in late 2005 and 2006 and are now in production. These installations were particularly challenging for us, representing a more expanded scope than that of our historical system deliveries. We were successful in delivering these programs, but at higher costs than have been customary. In another case, we bid a program aggressively as part of a broader market development strategy that we believe will yield good long-term performance. The fixed costs for these systems, which include amortization and depreciation of costs capitalized during the delivery process, as well as field service and operational costs to manage and maintain them, are higher than average and, thus, reduce reported margins. We anticipate that we will be able to improve profit margins in these accounts over time and earn a better return on investment over the life of the account relationship.

Gross Profit

	Twelve Months Ended December 31,		Dollar Increase (Decrease)	Percent Increase (Decrease)
	2006	2005		
Gross Profit:				
Service	\$ 24,864	\$ 23,226	\$ 1,638	7 %
Product and subscription	10,614	9,655	959	10 %
Total	\$ 35,478	\$ 32,881	\$ 2,597	8 %
Gross Profit (as % of related revenue components):				
Service	29%	27%		
Product and subscription	57%	59%		
Total	34%	32%		

The changes in gross profit as a percentage of revenue, for both the revenue components and overall gross profit, for the year ended December 31, 2006 and as compared to the year ended December 31, 2005 was primarily due to the reasons described above under the Cost of Revenue section.

*Operating Expenses**Sales and marketing*

	Twelve Months Ended December 31,		Dollar	Percent
	2006	2005 (in 000 \$)	Increase (Decrease)	Increase (Decrease)
Sales and marketing	\$ 16,355	\$ 15,777	\$ 578	4 %
Sales and marketing (as % of total revenue)	15%	16%		

Sales and marketing expenses consist primarily of:

- compensation, benefits and related costs of sales and marketing employees, product managers and sales engineers,
- recruiting,
- travel,
- market research,
- costs associated with marketing programs, such as trade shows, public relations and new product launches,
- stock-based compensation expense, and
- charges for infrastructure and centralized costs.

The increase in sales and marketing expense resulted primarily from:

- increased professional fees of \$0.5 million related to supporting the sales effort in a number of state bids and proposals,
- increased stock option expense of \$0.5 million, related to the adoption of SFAS 123(R) regarding stock-based compensation as discussed below, offset by
- decreased temporary labor of \$0.5 million as part of the cost cutting initiative.

We anticipate that we will continue to invest in sales and marketing at slightly above 2006 levels reflecting an enhanced focus on domestic and international markets.

Research, development and engineering

	Twelve Months Ended December 31,		Dollar	Percent
	2006	2005 (in 000 \$)	Increase (Decrease)	Increase (Decrease)
Research, development and engineering	\$ 10,269	\$ 13,131	\$ (2,862)	(22)%
Research, development and engineering (as % of total revenue)	10%	13%		

Research, development and engineering expenses consist primarily of:

- compensation, benefits and related costs of software developers and quality assurance personnel,

25

- payments to outside contractors,
- the purchase of materials and services for product development, primarily in the card systems area,
- stock-based compensation expense, and
- charges for infrastructure and centralized costs.

The decrease in research, development and engineering expenses resulted primarily from:

- decreased employee compensation-related expenses of \$2.4 million resulting from the completion of key products and subsequent redeployment of resources to program activities as part our restructuring initiative undertaken throughout the current year, offset by
- increased stock option expense of \$0.3 million.

We anticipate that we will reduce research, development and engineering expenses in the near term reflecting completion of some of our more significant product initiatives, while working to moderate spending in the longer term.

General and administrative

	Twelve Months Ended December 31,		Dollar	Percent
	2006	2005	Increase (Decrease)	Increase (Decrease)
	(in 000 \$)			
General and administrative	\$ 17,484	\$ 21,524	\$ (4,040)	(19)%
General and administrative (as % of total revenue)	16%	21%		

General and administrative expenses consist primarily of:

- compensation, benefits and related costs of executive, finance and administrative personnel,
- legal, human resources and other professional fees,
- stock-based compensation expense, and
- charges for infrastructure and centralized costs.

The decrease in general and administrative expenses resulted primarily from:

- decreased audit, consulting and legal fees of \$2.7 million related to our audit and review, Sarbanes-Oxley audit, compliance and remediation efforts in 2005,
- decreased other administration costs such as travel related expenses, telephone and insurance of \$0.8 million related to cost cutting initiatives,
- decreased temporary labor of \$0.7 million as part of the cost cutting initiative,
- decrease in depreciation expense of \$0.5 million as part of the cost cutting initiative and assets being fully depreciated,

- decreased reserves for bad debts of \$0.2 million, offset by
- increased stock option expense of \$1.4 million.

26

We anticipate that we will reduce our general and administrative expenses in the near term reflecting the benefits of our cost cutting initiatives. We are continuing to examine means to gain efficiencies to reduce general and administrative spending as a percentage of revenue in the longer term.

Amortization of intangible assets

	Twelve Months Ended December 31,		Dollar Increase (Decrease)	Percent Increase (Decrease)
	2006	2005 (in 000 \$)		
Amortization of intangibles	\$ 2,171	\$ 4,035	\$ (1,864)	(46)%
Amortization of intangibles (as % of total revenue)	2%	4%		

We account for intangible assets resulting from acquisitions in accordance with Financial Accounting Standards Board (FASB) Statement Nos. 141, *Business Combinations* and 142, *Goodwill and Other Intangible Assets*. These statements require the recording of intangible assets under purchase accounting rules, and require the amortization of such intangible assets over their expected useful life. As a result, in December 2001, we recorded \$29.5 million of intangible assets related to the acquisition of certain assets and certain liabilities from Polaroid and affiliates. These intangible assets were set up to amortize over a 12-year period, representing the expected useful life. Changes in contract status and customer relationships may lengthen or shorten the expected useful life of such intangible assets, or cause an impairment charge related to the intangible asset, so some variability is expected to exist related to intangibles depending on internal and external factors.

The decrease in amortization of intangible assets resulted primarily from extended amortization periods from contract extensions on several domestic customers and the increased amortization in 2005 related to a domestic customer who awarded their contract to a competitor. The intangible asset related to this customer was fully amortized by the fourth quarter of 2005.

The estimated amortization of intangibles over the next five years is as follows:

	2007 (in 000 \$)	2008	2009	2010	2011
Amortization of intangibles	\$1,669	\$1,669	\$1,669	\$1,669	\$1,669

Intellectual property

	Twelve Months Ended December 31		Dollar Increase (Decrease)	Percent Increase (Decrease)
	2006	2005 (in 000 \$)		
Intellectual property	\$ 1,774	\$ 2,014	\$ (240)	(12)%
Intellectual property (as % of total revenue)	2%	2%		

Intellectual property costs primarily consist of:

- employee-related expenses, such as salaries, benefits, recruiting costs, and incentive plans,
- costs associated with documenting, applying for, maintaining patents,
- stock-based compensation expense, and

- charges for infrastructure and centralized costs.

The slight decrease in intellectual property expenses resulted primarily from:

- decrease of \$0.2 million related as part of the restructuring initiative, and
- decrease of \$0.1 million in consulting fees paid to third-party agents and government fees related to patent and other intellectual property work.

We anticipate that we will continue to invest at approximately the current run rate of dollars in intellectual property in the near term while working to moderate spending in the longer term.

Restructuring charges, net

	Twelve Months Ended December 31, 2006 (in 000 \$)
Cost of revenue	\$ 159
Sales and marketing	93
Research, development and engineering	248
General and administrative	47
Total	\$ 547

In the second quarter, we accelerated productivity improvement initiatives and significantly reduced fixed costs in order to facilitate our effort to achieve profitability. The reduction in fixed costs included reduction of our workforce by nearly 20% since the beginning of 2006. The restructuring charge for the year ended December 31, 2006 totaled \$547,000, primarily due to employee severance and related costs. These restructuring charges were allocated out of the departments as noted above.

Stock-based compensation. Stock-based compensation includes expense charges for all stock-based awards to employees and directors. Such awards include option grants, restricted stock awards, and shares expected to be purchased under an employee stock purchase plan. On January 1, 2006, the Company adopted SFAS 123(R), which requires the measurement and recognition of compensation for all stock-based awards made to employees and directors including stock options and employee stock purchases under a stock purchase plan based on estimated fair values. SFAS 123(R) supersedes previous accounting under Accounting Principles Board Opinion (APB) No. 25, Accounting for Stock Issued to Employees, for periods beginning in fiscal 2006. In March 2005, the Securities and Exchange Commission issued Staff Accounting Bulletin (SAB) No. 107 relating to application of SFAS 123(R). The Company has applied the provisions of SAB 107 in our adoption of SFAS 123(R).

The Company adopted SFAS 123(R) using the modified prospective transition method, which requires the application of the accounting standard as of January 1, 2006, the first day of our 2006 fiscal year. In accordance with the modified prospective transition method, the Company's consolidated financial statements for periods prior to fiscal year 2006 have not been restated to reflect this change. Stock-based compensation recognized in the year ended December 31, 2006 is based on the value of the portion of the stock-based award that will vest during the period, adjusted for expected forfeitures. Stock-based compensation recognized in the Company's consolidated financial statements in the year ended December 31, 2006 includes compensation cost for stock-based awards granted prior to, but not fully vested as of, December 31, 2005 and stock-based awards granted subsequent to December 31, 2005. The compensation cost for awards granted prior to January 1, 2006 is based on the grant date fair value estimated in accordance with the pro forma provisions of SFAS 123 while awards granted on or after January 1, 2006 follow the provisions of SFAS 123(R) to determine the grant date fair value and

compensation cost. Compensation cost for all stock-based awards is recognized using the straight-line method.

Upon adoption of SFAS 123(R), the Company continued to use the Black-Scholes option pricing model as its method of valuation for stock-based awards. The Company's determination of the fair value of stock-based awards on the date of grant using an option pricing model is affected by our stock price as well as assumptions regarding a number of highly complex and subjective variables. These variables include, but are not limited to the expected life of the award, our expected stock price volatility over the term of the award and actual and projected exercise behaviors. Although the fair value of stock-based awards is determined in accordance with SFAS 123(R) and SAB 107, the Black-Scholes option pricing model requires the input of highly subjective assumptions, and other reasonable assumptions could provide differing results.

Prior to January 1, 2006, the Company applied the recognition and measurement principles of APB Opinion No. 25, *Accounting for Stock Issued to Employees*, and related interpretations including FASB Interpretation No. 44, *Accounting for Certain Transactions Involving Stock Compensation, an Interpretation of APB Opinion No. 25*, as allowed by FASB Statement No. 123, *Accounting for Stock-Based Compensation*, FASB Statement No. 123 and FASB Statement No. 148, *Accounting for Stock-Based Compensation Transition and Disclosure, an amendment of FASB Statement No. 123*, established accounting and disclosure requirements using a fair-value-based method of accounting for stock-based employee compensation plans. Under APB Opinion No. 25, stock-based compensation expense is recognized for stock awards granted with an exercise price below fair market value on the date of grant.

The expense was recorded in the respective statement of operations expense categories for the employees to which it applies, as set forth in the table below.

	Twelve Months Ended	
	December 31,	
	2006	2005
	(in 000 \$)	
Cost of revenue	\$ 281	\$
Sales and marketing	509	
Research, development and engineering	325	
General and administrative	1,863	506
Intellectual Property	35	
	\$ 3,013	\$ 506

We anticipate an additional \$6.6 million in stock-based compensation expense through fiscal 2010 for awards outstanding as of December 31, 2006. Our tax accounting may also be impacted by actual exercise behavior and the relative market prices at exercise.

On December 15, 2005, the Board of Directors of the Company approved the acceleration of vesting of the Company's outstanding stock options with option exercise prices equal to or greater than \$9.00. The acceleration applied to all options outstanding as of December 31, 2005 under the Company's Restated 1999 Stock Incentive Plan and 2000 Non-Officer Employee Stock Incentive Plan, except for options held by members of the Company's Board of Directors. Options to purchase 422,248 shares of the Company's common stock, or 6% of the Company's total outstanding options, with a weighted average exercise price of \$11.51 and varying remaining vesting schedules, were subject to this acceleration and became immediately vested and exercisable as of December 31, 2005. Of these 422,248 options, 120,972 options are held by the Company's executive officers.

On December 21, 2004, the Audit, Compensation and Corporate Governance Committees of the Board of Directors of the Company approved the acceleration of vesting of the Company's outstanding stock options with option exercise prices greater than \$15.00. The acceleration applied to all options outstanding under the Company's Restated 1999 Stock Incentive Plan and 2000 Non-Officer Employee Stock Incentive Plan that would not have otherwise vested in full by June 30, 2005 in accordance with their terms. The effective date of the vesting acceleration was December 31, 2004. Options to purchase 310,057 shares of the Company's common stock, or 5% of the total number of options of the Company outstanding as of December 31, 2004 with remaining vesting schedules, were accelerated. Of these 310,057 options, approximately 50,000 options were held by the Company's executive officers.

As a result of these accelerations, the Company reduced its exposure to the effects of SFAS 123(R) by approximately \$2.5 million for fiscal years 2006 through 2009. No additional compensation expense was recorded in the statement of operations as the options that were accelerated had an exercise price greater than the fair market value of the shares underlying the options on the date of the modification.

Total other income (expense), net. Other income (expense), net consists primarily of interest received and paid. The increase in other income (expense) resulted primarily from higher interest earned on cash and investment balances, which was partially offset by higher interest expense related to capitalized leases. In addition, we experienced a foreign currency translation gain of approximately \$0.3 million in connection with the consolidation of our international subsidiaries.

Provision for income taxes. Due to the Company's domestic losses for the years ended December 31, 2006, 2005 and 2004 there was no provision for U.S. federal or state income taxes. As the Company was profitable in some foreign jurisdictions during 2006, 2005 and 2004 we provided for income taxes expected to be paid on our international operations. At December 31, 2006, the Company had net operating loss carryforwards for federal, state and foreign income tax reporting purposes of approximately \$116.5 million and research and experimentation credits of approximately \$2.0 million which expire through 2026 and 2024, respectively, if not utilized. Approximately \$26.4 million of the net operating losses is related to the tax benefit from the exercise of stock options and thus any tax benefit realized in relation to those carryforwards will be allocated to contributed capital if subsequently recognized. Under the Tax Reform Act of 1986, the amounts of and benefits from net operating loss carryforwards may be impaired or limited in certain circumstances, including a change of more than 50% in ownership.

Years Ended December 31, 2005 and 2004

Revenue

	Twelve Months Ended December 31,		Dollar	Percent
	2005	2004	Increase (Decrease)	Increase (Decrease)
	(in 000 \$)			
Revenue:				
Service	\$ 84,691	\$ 73,919	\$ 10,772	15 %
Product and subscription	16,362	19,028	(2,666)	(14)%
Total	\$ 101,053	\$ 92,947	\$ 8,106	9 %
Revenue (as % of total revenue):				
Service	84%	80%		
Product and subscription	16%	20%		
Total	100%	100%		

Total revenue increased \$8.1 million from 2004 to 2005. The increase resulted primarily from additional government programs added in late 2004 and early 2005, such as Florida, Alabama, Mexico, Latvia and Ohio, that were either at or near full production by the end of 2005.

Service. The \$10.8 million increase in Service revenue was primarily due to issuance revenue from new programs for Mexico and Latvia, which started generating revenue in the second quarter of 2004; Florida, which started in the third quarter of 2004; Ohio, which started in the first quarter of 2005; and Alabama, which started in the second quarter of 2005, offset partially by contracts that ended and contracts that converted to consumable sales.

Product and subscription. The \$2.7 million decrease in product and subscription revenue was primarily related to the timing of large non-recurring sales to domestic and foreign customers that occurred in 2004, partially offset by smaller non-recurring sales to domestic and foreign customers that occurred in 2005.

Revenue by Geography

	Twelve Months Ended December 31, 2005		Dollar Increase (Decrease)	Percent Increase (Decrease)
	(in 000 \$)			
Revenue by geography:				
Domestic	\$ 80,119	\$ 72,173	\$ 7,946	11 %
International	20,934	20,774	160	1 %
Total	\$ 101,053	\$ 92,947	\$ 8,106	9 %
Revenue (as % of total revenue):				
Domestic	79%	78%		
International	21%	22%		
Total	100%	100%		

International revenue in 2005 was essentially the same as in 2004 because incremental issuance revenue from Mexico and Latvia largely offset a one time sales of products that occurred in 2004.

We had no customer that accounted for more than 10% of our revenue in 2005 or 2004.

Cost of Revenue

	Three Months Ended December 31, 2005		Dollar Increase (Decrease)	Percent Increase (Decrease)
	(in 000 \$)			
Cost of Revenue:				
Service	\$ 61,465	\$ 47,591	\$ 13,874	29 %
Product and subscription	6,707	11,784	(5,077)	(43)%
Total	\$ 68,172	\$ 59,375	\$ 8,797	15 %
Cost of Revenue (as % of related revenue components):				
Service	73%	64%		
Product and subscription	41%	62%		

Service. The \$13.9 million increase was primarily the result of higher consumables and general support costs related to the higher revenue identified above, higher depreciation on revenue-generating assets, increased costs to deliver support and maintenance for new and existing programs, and increased freight costs related to higher shipping activity, partially offset by lower charges for inventory reserves.

Product and subscription. The cost of product and subscription revenue primarily includes compensation for operations personnel, costs of consumables sold to third parties, costs of machinery sold to third parties, and Internet service provider connectivity charges and image search data fees to support

Edgar Filing: DIGIMARC CORP - Form 10-K

the services offered to our subscription customers. The \$5.1 million decrease was the result of a combination of lower revenues and lower costs on the 2005 revenue mix.

The costs included in our cost of revenue are comprised of three categories as described below:

	Twelve Months Ended December 31,		Dollar	Percent
	2005	2004	Increase (Decrease)	Increase (Decrease)
	(in 000 \$)			
Cost of revenue:				
Variable	\$ 28,083	\$ 29,253	\$ (1,170)	(4)%
Fixed field support and manufacturing	25,997	21,511	4,486	21 %
Program depreciation	14,092	8,611	5,481	64 %
Total	\$ 68,172	\$ 59,375	\$ 8,797	15 %
Cost of revenue (as % of total revenue):				
Variable	28%	32%		
Fixed field support and manufacturing	26%	23%		
Program depreciation	14%	9%		
Total	68%	64%		

As a percentage of revenue, we experienced a slight reduction in our variable costs to deliver incremental revenue. The improvement related to continued pricing improvement with vendors and improved yields during the manufacturing process.

The increase in fixed costs was primarily due to newer contracts requiring additional headcount as well as travel costs to support them.

Program depreciation showed the largest increase of the three components of cost of revenue. The higher fixed costs as a percentage of revenue was a result of several factors. The primary factor related to some new programs involving competitive wins, where we provided a complete system replacement using advanced technologies. These programs were completed and transitioned from deployment to revenue production, and thus affected margins. These installations were particularly challenging for us, representing a stretch in terms of scope from our historical system deliveries. We were successful in delivering these programs, but at higher costs than had been customary. In one other case, we bid a program aggressively as part of a broader market development strategy that we believed would yield good long-term performance. The fixed costs for these systems, which included amortization and depreciation of costs capitalized during the delivery process as well as field service and operational costs to manage and maintain them, were higher than average and, thus, reduced reported margins.

Gross Profit

	Twelve Months Ended December 31,		Dollar Increase (Decrease)	Percent Increase (Decrease)
	2005 (in 000 \$)	2004		
Gross Profit:				
Service	\$ 23,226	\$ 26,328	\$ (3,102)	(12)%
Product and subscription	9,655	7,244	2,411	33 %
Total	\$ 32,881	\$ 33,572	\$ (691)	(2)%
Gross Profit (as % of related revenue components):				
Service	27%	36%		
Product and subscription	59%	38%		
Total	32%	36%		

The \$0.7 million decrease in gross profit for the year ended December 31, 2005 compared to the prior year was largely for the reasons stated above under the *Cost of Revenue* section.

*Operating Expenses**Sales and marketing*

	Twelve Months Ended December 31,		Dollar Increase (Decrease)	Percent Increase (Decrease)
	2005	2004 (in 000 \$)		
Sales and marketing	\$ 15,777	\$ 12,908	\$ 2,869	22 %
Sales and marketing (as % of total revenue)	16%	14%		

The increase in sales and marketing expenses of \$2.9 million resulted primarily from the following:

- employee compensation-related expenses for salaries, benefits, recruiting costs, and incentive plans increased \$2.2 million due to personnel mix for higher level focus on marketing and governmental activities, and higher benefit program costs;
- an increase in bids and proposals work of \$0.9 million;
- an increase in presence at tradeshow, advertising, consulting fees and event sponsorship of approximately \$0.4 million;
- partially offset by an impairment charge of \$0.5 million taken in 2004, with no such charge in 2005, related to investments in companies licensed to market our digital watermarking technology.

Research, development and engineering

	Twelve Months Ended December 31,		Dollar Increase (Decrease)	Percent Increase (Decrease)
	2005	2004 (in 000 \$)		
Research, development and engineering	\$ 13,131	\$ 8,327	\$ 4,804	58 %
Research, development and engineering (as % of total revenue)	13%	9%		

The increase in research, development and engineering expenses of \$4.8 million resulted primarily from the following:

- employee compensation-related expenses for salaries, benefits, recruiting costs, and incentive plans increased \$2.5 million due to personnel mix for higher level focus on government program activities, and higher benefit program costs, offset by a decrease in contract labor of \$2.2 million as we transitioned contractors to full time employee status;
- change in the application of resources from capital projects to research activities which are expensed of \$3.5 million to enhance existing products, develop new products, and focus on requirements of the recently passed REAL ID Act;
- increased consulting and professional fees of \$0.3 million for various projects; and
- increased allocated infrastructure and centralized costs of \$0.5 million.

General and administrative

	Twelve Months Ended December 31,		Dollar	Percent
	2005	2004 (in 000 \$)	Increase (Decrease)	Increase (Decrease)
General and administrative	\$ 21,524	\$ 17,150	\$ 4,374	26 %
General and administrative (as % of total revenue)	21%	19%		

The increase in general and administrative expenses of \$4.4 million resulted primarily from the following:

- increased headcount and change in skills mix to address enhanced governance and internal controls drove up employee-related expenses such as salaries, benefits, recruiting costs, and incentive plans by \$2.2 million;
- audit and consulting fees increased \$1.4 million primarily related to our 2004 year-end audit, restatement work, Sarbanes-Oxley audit, and finance staff expansion;
- increased software expense of \$0.4 million related to continued licensing costs and software upgrades; and,
- increased stock-based compensation of \$0.5 million related to restricted stock.

Amortization of intangible assets

	Twelve Months Ended December 31,		Dollar	Percent
	2005	2004 (in 000 \$)	Increase (Decrease)	Increase (Decrease)
Amortization of intangibles	\$ 4,035	\$ 2,536	\$ 1,499	59 %
Amortization of intangibles (as % of total revenue)	4%	3%		

Amortization expense increased in 2005 due to the loss of certain contracts with relatively high intangible balances, and the reassessment of useful lives for certain international customers.

Intellectual property

	Twelve Months Ended December 31		Dollar Increase (Decrease)	Percent Increase (Decrease)
	2005	2004 (in 000 \$)		
Intellectual property	\$ 2,014	\$ 2,162	\$ (148)	(7)%
Intellectual property (as % of total revenue)	2%	2%		

The decrease in intellectual property expense of \$0.1 million was primarily due to consulting fees paid to third-party attorneys related to patent work in 2004.

Stock-based compensation. Stock-based compensation expense relates to restricted stock granted in 2005, as described below, is based on the fair market value of the Company's common stock on the date the restricted stock was granted (measurement date), and is recognized over the four-year vesting period of the related restricted stock using the straight-line method. The expense was recorded in the respective statement of operations expense categories for the employees to which it applies, as set forth in the table below.

	Twelve Months Ended December 31,	
	2005 (in 000 \$)	2004
Sales and marketing	\$	\$
Research, development and engineering		
General and administrative	506	
	\$ 506	\$

Total other income (expense), net. Other income (expense), net consists primarily of interest received and paid. The relatively flat difference resulted from lower average cash balances and higher average interest rates during the majority of fiscal 2005.

Provision for income taxes. For the years ended December 31, 2005 and 2004, the Company was profitable in some foreign jurisdictions. Therefore, during 2005 and 2004 we provided for income taxes expected to be paid on our international operations.

Liquidity and Capital Resources

As of December 31, 2006, we had cash and cash equivalents, restricted cash, and short-term investments of \$33.1 million, representing an increase of \$1.1 million from \$32.0 million at December 31, 2005. As of December 31, 2006, \$9.9 million of cash and cash equivalents is restricted as a result of the requirements of performance bonds that we are obligated to maintain in connection with some of our long-term contracts in our secure ID systems business. We support the performance bonds with letters of credit, which may or may not require restricted cash. Working capital at December 31, 2006 was \$29.9 million, compared to working capital of \$33.4 million at December 31, 2005. The decrease in working capital primarily relates to investments made in various programs that we anticipate will contribute to revenue growth beyond 2007.

Operating Cash Flow. The components of operating cash flows were:

	Twelve Months Ended		
	December 31,		
	2006	2005	2004
	(in 000 \$)		
Net loss	\$ (11,740)	\$ (23,097)	\$ (9,022)
Non-cash items	17,946	20,167	15,269
Changes in operating assets and liabilities	3,112	(267)	(1,568)
Net cash provided by (used in) operating activities	\$ 9,318	\$ (3,197)	\$ 4,679

The major changes for the year ended December 31, 2006 in the non-cash charges related to:

- decreases in depreciation and amortization from \$19.7 million to \$15.5 million primarily related to the change in estimated useful lives of our program assets and offset by the increase in newer program assets, and
- increase in stock-based compensation expense from \$0.5 million to \$3.0 million primarily related to the implementation of SFAS 123(R).

The major changes in the operating assets and liabilities for the year ended December 31, 2006 primarily related to:

- increase in deferred revenue of \$3.6 million related to cash collections that contributed to an increased backlog of future revenues, and
- decreases of \$1.4 million in accounts receivable and \$0.9 million in inventory, net reflecting improved asset management while increasing revenues, offset by
- increase in restricted cash of \$2.7 million associated with renewals of our performance bonds for our major state programs, and
- decrease in accounts payable of \$1.0 million reflecting lower level of operating expenses and inventory during 2006.

The \$3.2 million of cash used in operations for the year ended December 31, 2005 resulted from net loss of \$23.1 million which includes non cash items related to depreciation, amortization, and stock-based compensation aggregating to \$20.2 million. Items positively impacting operating cash flow were decreases in restricted cash of \$1.0 million and in inventory of \$1.4 million, and increases in deferred revenue of \$2.0 million and in accrued payroll and related costs of \$1.6 million. Negatively impacting operating cash flow was an increase in trade and unbilled accounts receivable, net of \$1.0 million and in other current assets of \$1.0 million, along with a decrease in accounts payable of \$4.7 million.

The \$4.7 million of cash provided by operations for the year ended December 31, 2004 resulted from net loss of \$9.0 million which includes non cash items related to depreciation and amortization of \$13.5 million. Items positively impacting operating cash flow were increases in accounts payable of \$4.8 million, in deferred revenue of \$1.7 million, and in accrued payroll and related costs of \$1.1 million. Negatively impacting operating cash flow was an increase in restricted cash of \$6.3 million, an increase in inventory of \$2.6 million and an increase in trade and unbilled accounts receivable, net of \$1.4 million.

Investing Cash Flow. The \$9.8 million of cash used in investing activities for the year ended December 31, 2006 primarily related to \$10.5 million for the purchase of property and equipment, including capitalized labor costs of \$3.9 million, partially offset by \$0.7 million in net sales of short-term investments. We also acquired approximately \$0.6 million of fixed assets during 2006 through capital lease arrangements.

The \$8.8 million of cash provided by investing activities for the year ended December 31, 2005 primarily related to \$24.3 million in net sales of short-term investments, partially offset by \$15.5 million for the purchase of property and equipment, including capitalized labor costs of \$7.9 million. We also acquired approximately \$0.3 million of fixed assets during 2005 through capital lease arrangements.

The \$21.7 million of cash used in investing activities for the year ended December 31, 2004 primarily related to \$39.7 million for the purchase of property and equipment, including capitalized labor costs of \$12.4 million, partially offset by \$18.0 million in net sales of short-term investments. We also acquired approximately \$0.1 million of fixed assets during 2004 through capital lease arrangements.

Financing Cash Flow. The \$0.4 million of cash used in financing activities for the year ended December 31, 2006 primarily related to \$0.6 million of principal payments under capital leases, offset by proceeds from the issuance of stock for \$0.2 million related to the employee stock option and employee stock purchase plans.

The \$0.2 million of cash used in financing activities for the year ended December 31, 2005 primarily related to \$0.5 million of principal payments under capital leases, offset by proceeds from the issuance of stock for \$0.3 million related to the employee stock option and employee stock purchase plans.

The \$1.9 million of cash provided by financing activities for the year ended December 31, 2004 primarily related to the issuance of stock for \$2.1 million related to the employee stock option and employee stock purchase plans, offset by \$0.2 million of principal payments under capital leases.

Commitments and Contingencies. Our significant commitments consist of obligations under non-cancelable operating leases, which totaled \$8.1 million as of December 31, 2006, and are payable in monthly installments through October 2011. Our obligations under non-cancelable capital leases, which totaled \$1.0 million as of December 31, 2006, are payable in monthly installments through 2011. We are contractually obligated to make the following payments as of December 31, 2006:

Contractual Obligations

	Payment Due by Period (in 000 s)				
	Total	Less than 1 year	1-3 years	4-5 years	More than 5 years
Capital leases	\$ 1,027	\$ 573	\$ 316	\$ 138	\$
Operating leases	8,076	2,144	3,836	2,096	
Total contractual obligations	\$ 9,103	\$ 2,717	\$ 4,152	\$ 2,234	\$

Many of our secure identity management contracts have significant capital requirements. The general industry model for supplying driver license issuance systems to State driver license issuers is for the system supplier to develop and install the issuance system using the supplier's capital and to charge the customer on a per-card issued basis. As a result, during times of substantial competitive wins and/or substantial system upgrades, the Company may experience significant working capital needs that may exceed cash flow from operations. To date, the Company has relied upon cash reserves to fund such expenditures.

We have driver license contracts with various States that are not yet fully deployed and we have pending add-on and upgrade orders. In order to complete these contracts and pending orders, we estimate we will incur approximately \$17 million of expenditures. The estimates are derived from information known to us as of quarter end, the time the estimates were prepared. Actual expenditures may vary from our estimates. We anticipate that these expenditures will be recouped through receipts from the related long-term price-per-card agreements and from the value of the add-on and upgrade orders we have received.

Depending on our operating results, our planned operating expenses and capital expenditures may constitute a material use of our cash resources. In addition, we expect that we will utilize cash in the upcoming few quarters as we complete program implementations. We may utilize cash resources to fund acquisitions or investments in complementary businesses, technologies or product lines.

The Company from time to time experiences delays in identification system implementation, timely acceptance for identification systems programs, concerns regarding identification system program performance, and other contractual disputes. Customers have asserted, and may in the future assert, compensatory or liquidated damages, breach of contract, or other claims alleging that we have failed to meet timing or other delivery requirements and milestones pursuant to the terms of such contracts. From time to time, customers have given notice of their intention to assert claims for liquidated damages. Management believes that these assertions are part of the resolution process involving commercial disagreements over the delivery terms of these contracts. Such disputes are not uncommon and tend to be resolved over time. To date, we have not paid any material contractual damages in connection with a customer dispute. While there is always risk that damages could be assessed in the future, management cannot predict, as of December 31, 2006, whether any material damages will be imposed in the future or what the amount of any such damages would be if they were to be imposed. However, our failure to meet contractual milestones or other performance requirements as promised, or to successfully resolve customer disputes, could result in our having to incur liability for damages, as well as increased costs, lower margins, or compensatory obligations in addition to other losses, such as harm to our reputation. Such circumstances could have a material adverse effect on our business and financial results. We anticipate that future contracts will continue to have such provisions unless and until industry practices change.

Future Cash Expectations. We believe that our current cash, cash equivalents, and short-term investment balances will satisfy our projected working capital and capital expenditure requirements for at least the next 12 months. In addition, we expect to generate positive cash flow from operations in 2007 which will fund a substantial portion of our capital needs. We also intend to utilize capital and operating lease financing where appropriate. Thereafter, we anticipate continuing to use cash, cash equivalents, short-term investment balances and equipment lease financing to satisfy our projected working capital and capital expenditure requirements. However, in the event that we were to win contracts requiring significant capital investment, we may need to seek additional financing.

In order to take advantage of opportunities, we may find it necessary to obtain additional equity financing, debt financing, or credit facilities. However, we do not believe at this time that our long-term working capital and capital expenditures would require us to take steps to remedy any such potential deficiencies. If it were necessary to obtain additional financings or credit facilities, we may not be able to do so, or if these funds are available, they may not be available on satisfactory terms.

Off-Balance Sheet Arrangements

We do not have any off-balance sheet arrangements that have or are reasonably likely to have a current or future effect on our financial condition, changes in financial condition, revenue or expenses, results of operations, liquidity, capital expenditures or capital resources that is material to investors.

Recent Accounting Pronouncements

In March 2006, the FASB issued SFAS No. 156, Accounting for Servicing of Financial Assets, an amendment of SFAS No. 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities. The statement changes the way entities account for servicing assets and obligations associated with financial assets acquired or disposed of. SFAS No. 156 is effective for the first fiscal year beginning after September 15, 2006. The Company has concluded that this standard does not currently apply.

In September 2006, the FASB issued SFAS No. 157, *Fair Value Measurements*, which defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles, and expands disclosures about fair value. This statement does not require any new fair value measurements, but provides guidance on how to measure fair value by providing a fair value hierarchy used to classify the source of the information. SFAS No. 157 is effective for first fiscal year beginning after November 15, 2007. The Company is currently assessing the potential impact that adoption of this standard will have on our financial statements.

In July 2006, the FASB issued Interpretation No. 48, *Accounting for Uncertainty in Income Taxes*, which defines the threshold for recognizing the benefits of tax return positions in the financial statements as more-likely-than-not to be sustained by the taxing authority. Interpretation No. 48 applies to all tax positions accounted for under SFAS No. 109, *Accounting for Income Taxes*. Interpretation No. 48 is effective as of the beginning of the first fiscal year beginning after December 15, 2006. Upon adoption, the Company will adjust the financial statements if needed to reflect only those tax positions that are more-likely-than-not to be sustained as of the adoption date. Any adjustment will be recorded directly to our beginning retained earnings balance in the period of adoption and reported as a change in accounting principle. The Company is currently analyzing the effects of adopting Interpretation No. 48.

In September 2006, the SEC issued SAB 108, *Considering the Effects of Prior Year Misstatements When Quantifying Misstatements in Current Year Financial Statements*. The bulletin provides interpretive guidance on how to consider the effects of carryovers or reversals of prior year misstatements in quantifying a current year misstatement. SAB 108 is effective for the first fiscal year ending after November 15, 2006. The Company has applied the provisions of this interpretive bulletin and noted no material effect on the current financial statements.

In June 2006, the FASB ratified the Emerging Issues Task Force (EITF) consensus on EITF Issue No. 06-2, *Accounting for Sabbatical Leave and Other Similar Benefits Pursuant to FASB Statement No. 43*, which requires companies to accrue the cost of compensated absences under a sabbatical or similar benefit arrangement over the requisite service period. EITF Issue No. 06-2 is effective for fiscal years beginning after December 15, 2006. The cumulative effect of the application of this consensus on prior period results should be recognized through a cumulative-effect adjustment to retained earnings as of the beginning of the year of adoption. Elective retrospective application is also permitted. The Company has concluded that this issue does not currently apply.

Safe Harbor Statement under the Private Securities Litigation Reform Act of 1995

Because this Report on Form 10-K contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995, any of the risk factors set forth below or elsewhere in this Report on Form 10-Q or incorporated herein by reference could cause our actual results to differ materially from those results projected or suggested in such forward-looking statements. Statements that are not historical facts are hereby identified as forward-looking statements for the purposes of the safe harbor provided by Section 21E of the Securities Exchange Act of 1934 and Section 27A of the Securities Act of 1933. Such forward-looking statements include but are not limited to statements relating to:

- trends and expectations in revenue growth, including, but not limited to, statements regarding the temporary nature of the decrease in ID systems bid activity in 2006 and the expected increase of such activity in the future, statements regarding anticipated growth in U.S. driver license revenues due to broadening use of the driver license as a secure credential, and statements regarding opportunities to facilitate efforts of state government agencies to comply with the REAL ID Act;
- the success of new products, such as products relating to compliance with the REAL ID Act;

- our future level of investment in our business, including investment in development of products and technology, acquisition of new customers and development of new market opportunities;
- our ability to improve margins;
- anticipated expenses, costs, margins and investment activities in the foreseeable future;
- anticipated revenue to be generated from current contracts, patent and license technology fees and as a result of new programs;
- the investments required to complete certain driver license programs and our ability to recoup those expenses under the relevant contract;
- our profitability in future periods;
- the development and growth of the market for digital watermarking technology;
- momentum in the recognition of the benefits offered by digital watermarking and in the adoption of digital watermarking;
- business opportunities that could require that we seek additional financing;
- opportunities for increased participation in the global market for ID systems;
- the size and growth of our markets, including the U.S. driver license market;
- the existence of international growth opportunities and our future investment in such opportunities;
- the source of our future revenue;
- our expected short-term and long-term liquidity positions;
- our ability to fund our capital needs through cash flow from operations;
- our use of cash in upcoming quarters;
- anticipated levels of backlog in future periods;
- anticipated extensions of the term of our contract with the central banks; and
- the likelihood or outcome of legal proceedings and claims and their effect on our business.

Such forward-looking statements also include other statements containing words such as anticipate, estimate, expect, management believes, believe, we intend, should and similar words or phrases, which are intended to identify forward-looking statements. Actual results may vary materially due to, among other things, our failure to become profitable, the failure of the potential markets for our digital watermarking technology to develop as anticipated, the adoption of alternative technologies within these markets, as well as changes in economic, business, competitive, technology and/or regulatory factors and trends, and the other factors described in this Form 10-K or in our other documents filed with the SEC. All forward-looking statements are necessarily only estimates of future results and there can be no assurance that actual results will not differ materially from expectations, and, therefore, investors are cautioned not to place undue reliance on such statements. Investors should understand that it is not possible to predict or identify all risk factors and that the risks discussed below should not be considered a

Edgar Filing: DIGIMARC CORP - Form 10-K

complete statement of all potential risks and uncertainties. We do not intend to update any forward-looking statements as a result of future events or developments.

40

Factors Affecting Forward Looking Statements

Our business, financial condition, results of operation and cash flows may be impacted by a number of factors, including the factors set forth below.

Given our history of losses, we cannot guarantee profitability, particularly if we were to lose large contracts.

Except for the year 2003, we have incurred significant net losses from inception. Our accumulated deficit as of December 31, 2006 was \$99.7 million. In the second half of 2005 and continuing through 2006, we restructured our operations to improve productivity and reduce fixed costs. During the second quarter of 2006, we accelerated those activities significantly, resulting in a reduction of our workforce by nearly 20%. Overall, our workforce has been reduced by 30% since mid 2005. These actions resulted in an increase in earnings to a near break even level in the second half of 2006. However, in order to achieve sustained profitability, we will need to generate higher revenue than we have in prior years while controlling expenditures. Achieving sustained profitability will depend upon a variety of factors, including the impact of new financial accounting mandates requiring us to expense stock options, as well as the extent to which we may be required to increase the size of our workforce in order to execute our business strategy and capitalize on new opportunities. In addition, we evaluate our strategy and market opportunities on an ongoing basis and will adjust our approach to market conditions that prevail from time to time. Finally, various adverse developments including the loss of large contracts or cost overruns on our existing contracts could have a negative impact on our revenue or our margins. Accordingly, increases in our expenses may not be offset by revenue increases and as a result we may not be able to achieve or sustain profitability.

The loss of any large contract may result in loss of revenue and potential acceleration of amortization expense or impairment of intangible assets.

Contracts between government agencies and Digimarc have varying duration, generally five or more years in length. Some contracts we enter into contain cancellation clauses. In addition, after a contract period expires, generally the government agency can re-open the contract for competitive bidding. We anticipate that several of our significant customers will award new contracts through such a competitive bidding process in 2007. If we were to lose a contract due to cancellation or in a competitive bidding situation, then, in addition to the loss of revenue and margin on a prospective basis, we could also incur accelerated amortization expense or impairment of intangible assets related to the customer, which could adversely affect our financial results. We have not experienced the early termination of any driver license issuance contracts and are not aware of any early terminations of such contracts of our competitors.

The market for our products is highly competitive, and as a result, alternative technologies or larger companies may undermine, limit or eliminate the market for our products technologies, which would decrease our revenue and profits.

Edgar Filing: DIGIMARC CORP - Form 10-K

The markets in which we compete for business are intensely competitive and rapidly evolving. We expect competition to continue from both existing competitors and new market entrants. We face competition from other companies and from alternative technologies. The potential for an influx of federal funds into our core U.S. driver license market has drawn new competition and is likely to continue to do so. As we expand the applications for our technologies, we will experience more competition from products and services that are substitutes for our applications. Because our digital watermarking business is still in an early stage of development, we also may face competition from unexpected sources. Alternative technologies that may directly or indirectly compete with particular applications of our watermarking technologies include:

- Encryption - securing data during distribution using a secret code so it cannot be accessed except by authorized users;

41

- Containers inserting a media object in an encrypted wrapper, which prevents the media object from being duplicated and is used for content distribution and transaction management;
- DataGlyphs® a slightly visible modification of the characteristics of an image or document that is machine-readable;
- Scrambled Indicia® an optical refraction-based data-hiding technique that is inserted into an image and can be read with a lens;
- Traditional anti-counterfeiting technologies a number of solutions used currently by many governments (and that compete for budgetary outlays) designed to deter counterfeiting, including optically sensitive ink, magnetic threads and other materials used in the printing of currencies;
- Radio frequency tags embedding a chip that emits a signal when in close proximity with a receiver, which is being used in photo identification credentials, labels and tags;
- Internet technologies numerous existing and potential Internet access and search methods are competitive with the Digimarc MediaBridge system and the searching capabilities of Digimarc ImageBridge;
- Digital fingerprints and signatures a metric, or metrics, computed solely from a source image or audio or video track, that can be used to uniquely identify an image or track, or authenticate the image or track;
- Smart cards badges and cards including a semiconductor memory and/or processor used for authentication and related purposes; and
- Bar codes a data-carrying code, typically visible in nature (but invisible if printed in ultraviolet- or infrared-responsive inks).

In addition, as we more broadly apply our digital watermarking technologies to the Internet through new commercial solutions applications, we may begin to compete with a wide range of other types of companies beyond those companies using digital watermarking technologies and alternative technologies. We cannot assure you that digital watermarking technologies, and our products and services using these technologies, will gain widespread market acceptance.

New developments are expected to continue, and we cannot assure you that discoveries by others, including current and potential competitors, will not render our services and products noncompetitive. Moreover, because of rapid technological changes, we may be required to expend greater amounts of time and money than currently anticipated to develop new products and services, which in turn may necessitate us to require greater revenue streams on such products and services to cover developmental costs. Many of the companies that currently compete with us for some of our business, as well as other companies with whom we may compete in the future, are larger and national or international in scope and may have greater technical, financial, marketing, and political resources than we do. These resources could enable these companies to initiate severe price cuts or take other measures in an effort to gain market share or otherwise impede our progress. We cannot assure you that we will be able to compete successfully against current or future participants in our market or against alternative technologies, nor can we assure you that the competitive pressures we face will not decrease our revenue and profits in the future.

Our products could have unknown defects or errors, which may give rise to claims against us, divert application of our resources from other purposes or increase our project implementation and support costs.

Products and systems as complex as those we offer or develop may contain undetected defects or errors. Furthermore, we often provide complex implementation, integration, customization, consulting and

other technical services in connection with the implementation and ongoing maintenance of our products. Despite testing, defects or errors in our products and services may occur, which could result in delays in the development and implementation of products and systems, inability to meet customer requirements or expectations in a timely manner, loss of revenue or market share, increased implementation and support costs, failure to achieve market acceptance, diversion of development resources, injury to our reputation, increased insurance costs, increased service and warranty costs and warranty or breach of contract claims. Although we attempt to reduce the risk of losses resulting from warranty or breach of contract claims through warranty disclaimers and liability limitation clauses in our sales agreements when we can, these contractual provisions are sometimes not included and may not be enforceable in every instance. If a court refuses to enforce the liability-limiting provisions of our contracts for any reason, or if liabilities arose that were not contractually limited or adequately covered by insurance, the expense associated with defending such actions or paying the resultant claims could be significant.

If leading companies in our industry or standard-setting bodies or institutions downplay, minimize, or reject the use of digital watermarking, its deployment may be slowed and we may be unable to achieve revenue growth particularly in the media and entertainment sectors.

Many of our business endeavors, such as our licensing of intellectual property in support of audio and video copy-control applications, can be impeded or frustrated by larger, more influential companies or by standard-setting bodies or institutions downplaying, minimizing or rejecting the value or use of watermarking technology or any of our other technologies. Such a negative position by these companies, bodies or institutions, if taken, may result in obstacles for us that we would be incapable of overcoming and may block or impede the adoption of digital watermarking particularly in the media and entertainment market. In addition, potential customers in the media and entertainment industry may delay or reject initiatives that relate to deployment of digital watermarking. Such a development would make the achievement of our business objectives in this market difficult or impossible.

If we are unable to respond to regulatory or industry standards effectively, or if we are unable to develop and integrate new technologies effectively, our growth and the development of our products and services could be delayed or limited.

Our future success will depend in part on our ability to enhance and improve the responsiveness, functionality and features of our products and services in accordance with regulatory or industry standards. Our ability to remain competitive will depend in part on our ability to influence and respond to emerging industry and governmental standards, such as future regulations under the REAL ID Act, in a timely and cost-effective manner. If we are unable to influence these or other standards or respond to such standards effectively, our growth and the development of certain products and services could be delayed or limited.

Our market is characterized by new and evolving technologies. The success of our business will depend on our ability to develop and integrate new technologies effectively and address the increasingly sophisticated technological needs of our customers in a timely and cost-effective manner. Our ability to remain competitive will depend in part on our ability to:

- enhance and improve the responsiveness, functionality and other features of the products and services we offer or plan to offer;
- continue to develop our technical expertise; and
- develop and introduce new services, applications and technologies to meet changing customer needs and preferences and to integrate new technologies.

We cannot assure you that we will be successful in responding to these technological and industry challenges in a timely and cost-effective manner. If we are unable to develop or integrate new technologies effectively or respond to these changing needs, our margins could decrease, and our release of new products and services and the deployment of our watermarking technology could be adversely affected.

We may need to retain additional employees or contract labor in the future in order to take advantage of new business opportunities arising from increased demand, which could impede our ability to achieve or sustain profitability.

In the second half of 2005 and in 2006, we made significant reductions in our workforce as part of our efforts to reach profitability. These reductions did not impede our ability to meet demand because they were accompanied by improvements in our internal business processes and coincided with a period of relatively low bid activity with respect to development and deployment of new systems. We believe that this decrease in bid activity is temporary and that the U.S. driver license market will demonstrate increased demand in future periods. Our current reduced staffing levels could affect our ability to respond to increased demand for our services. In addition, to meet any increased demand and take advantage of new business opportunities in the future, we may need to increase our workforce through additional employees or contract labor, which would increase our costs. If we experience such an increase in costs, we may not succeed in achieving or sustaining profitability.

We depend on our senior management and key employees for our future success. If we are not able to retain, hire or integrate these employees, we may not be able to meet our commitments.

Our success depends to a significant extent on the performance and continued service of our senior management. Except for our Chief Executive Officer, our senior management does not have employment agreements. The loss of the services of any of our senior management could delay projects or undermine customer relationships.

Due to the high level of technical expertise that our industry requires, our ability to successfully develop, market, sell, license and support our products, services, and intellectual property depends to a significant degree upon the continued contributions of our key personnel in engineering, sales, marketing, operations, legal and licensing, many of whom would be difficult to replace. Similarly, without the continued contributions of our key finance personnel, we believe that our ability to meet our reporting obligations and operate successfully as a public company may be limited. We believe our future success will depend in large part upon our ability to retain our current key employees and our ability to attract, integrate and retain such personnel in the future. It may not be practical for us to match the compensation certain of our employees could garner at other employment. In addition, we may encounter difficulties in hiring and retaining employees because of concerns related to our financial performance. In addition, these circumstances may have a negative impact on the market price of our common stock, and employees and prospective employees may factor in the uncertainties relating to our stability and the value of any equity-based incentives in their decisions regarding employment opportunities and decide to leave our employ. In addition, our business is based in part on patented technology, which is unique and not generally known. New employees require substantial training, involving significant resources and management attention. Competition for experienced personnel in our business can be intense. If we do not succeed in attracting new, qualified personnel or in integrating, retaining and motivating our current personnel, our growth and ability to deliver products and services that our customers require may be hampered. Although our employees generally have executed agreements containing non-competition clauses, there is no assurance that a court would enforce all of the terms of these clauses or the clauses generally. If these clauses were not fully enforced, our employees could be able to freely join our competitors. Although we generally attempt to control access to and distribution of our proprietary information by our employees, there can be no assurances that the confidential nature of our proprietary

information will be maintained in the course of such future employment. Any of these events could have a material adverse effect on our financial and business prospects.

We expect our secure ID systems business to experience variability in gross margins.

We are likely to experience variability in gross margins on our government contracts due to numerous factors, including, among other things, the following:

- delays in project implementation;
- failure to achieve add-on sales to existing customers;
- governmental regulation of credentials and issuance policies;
- private sector usage trends for driver licenses and other credentials;
- level of commodity vs. proprietary components applicable to customer system specifications;
- whether contracts have been extended or renewed; and the amount of capital expenditure associated with such extension or renewal;
- price competition in competitive bids, contract renewals and contract extensions;
- variations in costs of materials and manufacturing;
- varying levels of efficiency of our workforce in delivering, implementing, and servicing contracts;
- seasonality of issuance volumes;
- sales mix related to card issuance revenues compared to product sales;
- sales mix related to domestic sales compared to international sales;
- sales mix related to adoption of new products compared to sales of current products;
- strategic decisions on new business;
- depreciation and amortization of capitalized project costs related to new or upgraded programs; and
- variability in the extent to which we are able to allocate personnel expenses to capital projects and thereby amortize such costs over the life of the relevant contract, rather than expensing such costs in the quarter in which they are incurred.

The numerous factors affecting gross margins make such margins complex and difficult to predict. We are continually refining our predictive tools and increasing our understanding of what drives these various factors. For reasons such as those listed above, we expect that there will be fluctuations in our future operating results as a result of the variability in margins from period to period in the secure ID systems business.

The majority of our revenue is subject to government procurement processes that may involve unpredictable delays and other unexpected changes which might limit our actual revenue in any given quarter.

We derive substantial portions of our revenue from government contracts which are subject to periodic open, competitive bids. The timing of such bids is solely within the discretion of the governmental authority. Consequently, large components of new revenue are tied to procurement schedules, which could shift as the needs of the related government procurement agencies change. Many of these governmental customers are facing continued budget pressures introducing added uncertainty. In addition, the Department of Homeland Security's initiatives in passports and border crossing cards, as well as delays in disbursement of funding for REAL ID Act projects, could create confusion within the U.S. driver license market that may delay purchase decisions by government customers. Any shift in the government procurement process, which is outside our control and may not be predictable, could result in delays in bookings forecasted for any particular financial period, could impact the predictability of our quarterly results, and might limit our actual revenue in any given quarter, resulting in reduced and less predictable revenue and an adverse affect on profitability.

Our future growth will depend to some extent on our successful implementation of our intellectual property in solutions provided by third parties, including partners and suppliers.

Our business and strategy rely, in part, on deployment of our digital watermark reader technology by third-party software developers and original equipment manufacturers. For example, one form of our digital watermark reader is commonly deployed in image editing applications (offered by vendors including Adobe, Corel and Ulead) to permit users of these products to read watermarks embedded in imagery, and thereby discern the identities of image owners. Another form of our digital watermark reader is used in our anti-counterfeiting product offerings. We anticipate entering into additional agreements with third-party vendors to create, promote and service products that incorporate, embed, integrate or bundle our technologies. If third parties who include such technologies in their products cease to do so, or we fail to obtain other partners that will incorporate, embed, integrate or bundle such technologies, or these partners are unsuccessful in their efforts, our efforts to expand deployment of our technologies would be adversely affected and, consequently, our ability to increase revenues would be adversely affected and we may suffer other adverse effects to our business. In addition, if our technologies do not perform according to market expectations, our future sales would suffer as customers seek other providers.

Some of our revenue models relating to anticipated products and services are under development. If these revenue models and pricing structures do not gain market acceptance, the corresponding anticipated products and services may fail to attract or retain customers and we may not be able to generate new or sustain existing revenue.

Some of our business involves embedding digital watermarks in traditional and digital media, including identification documents, secure documents, audio, video and imagery, and licensing our intellectual property. Through 2001, our revenue stream was based primarily on a combination of development, consulting, subscription and license fees from copyright protection and counterfeit deterrence applications. Beginning in 2002 and for the foreseeable future, we have seen, and we anticipate, that the majority of our revenue will be from government and private-sector customers for providing security-related applications relating to secure personal identification, copyright protection, and counterfeit deterrence to such customers. We have not fully developed revenue models for certain of our future digital watermarking applications and licensing endeavors. Because some of our products and services are not yet well-established in the marketplace, and because some such products and services will not directly displace existing solutions, we cannot be certain that the pricing structure for these products and services will gain market acceptance or be sustainable over time or that the marketing for such products and services will be effective.

The security systems used in our product and service offerings may be circumvented or sabotaged by third parties, which could result in the disclosure of sensitive government information or private personal information or cause other business interruptions that could damage our reputation and disrupt our business.

Our business relies on computers and other information technologies, both in-house and at customer and vendor locations. In addition, many of the systems we sell manage private personal information and protect information involved in sensitive government functions. The protective measures that we use in these systems may not prevent security breaches, and failure to prevent security breaches may disrupt our business, damage our reputation, and expose us to litigation and liability. A party who is able to circumvent security measures used in these systems could misappropriate sensitive or proprietary information or materials or cause interruptions or otherwise damage our products, services and reputation, and the property of our customers. If unintended parties obtain sensitive data and information, or create bugs or viruses or otherwise sabotage the functionality of our systems, we may receive negative publicity, incur liability to our customers or lose the confidence of our customers, any of which may cause the termination or modification of our contracts. Further, our insurance coverage may be insufficient to cover losses and liabilities that may result from such events.

In addition, we may be required to expend significant capital and other resources to protect ourselves against the threat of security breaches or to alleviate problems caused by these breaches. Such protection or remedial measures may not be available at a reasonable price or at all, or may not be entirely effective if commenced.

As international customers have accounted for approximately 20% of our total revenue during the fiscal year ended December 31, 2006, the loss of these customers or the failure to find new customers may result in a decline in our international revenue, which could adversely affect our profitability and slow our growth.

We expect revenue from sales of products and services to governments and other customers outside the U.S. to represent a growing percentage of our total revenue in the future. International sales and services are subject to a number of risks, including the following:

- changes in foreign government regulations and security requirements;
- export license requirements, tariffs and taxes;
- trade barriers;
- difficulty in protecting intellectual property;
- difficulty in collecting accounts receivable;
- currency fluctuations;
- longer payment cycles than those for customers in the United States;
- difficulty in managing foreign operations; and
- political and economic instability.

In addition, our experience with large international issuance programs is more limited than our experience with domestic programs. We do not have an extensive operational infrastructure for our international business. We generally act as a subcontractor or depend on local or international business partners and subcontractors for performance of substantial portions of these programs. These factors may result in greater risk of performance problems or of reduced profitability with respect to our international programs.

If we are affected by these risks, our sales of products and services to customers outside the U.S. could be reduced significantly. In addition, if foreign customers, in particular foreign government authorities,

terminate or delay the implementation of our products and services, we may have limited recourse against them to recover any potential losses.

We generally do not invoice our foreign sales in U.S. dollars, and, consequently, we are exposed to currency exchange fluctuations. We currently do not engage in foreign currency hedging transactions. We may in the future choose to limit our exposure by the purchase of forward foreign exchange contracts, collared options, currency swap agreements or through similar hedging strategies. However, no currency hedging strategy can fully protect against exchange-related losses.

A significant portion of our business depends on contracts that are subject to a variety of terms and conditions, including damage payment obligations, as well as a variety of other provisions that may cause our quarterly results to fluctuate and our anticipated revenue to potentially decrease significantly.

Our contracts for driver license and other identification issuance systems and related products typically include terms relating to time-based performance, development and delivery schedules, customer acceptance and testing, and other performance milestones. Such provisions are common in large scale government contracts at the state and federal levels. Because procedures often require compliance over extended periods of time, they give rise to an increased risk that we may fail to meet timing or other delivery requirements and milestones pursuant to the terms of such contracts. If we failed to meet such requirements or milestones, customers may assert against us compensatory or liquidated damages, breach of contract, or other claims. Consequently, our failure to meet contractual milestones or other performance requirements as promised could result in our having to incur increased costs, lower margins, or compensatory obligations, in addition to other losses, such as harm to our reputation. Such unexpected increases in costs to meet our contractual obligations or any other requirements necessary to address claims and damages with regard to our customer contracts could have a material adverse effect on our business and financial results. We anticipate that future contracts will continue to have such provisions unless and until industry practices change.

A significant portion of our business depends on a limited number of large, public-sector contracts, which are generally subject to termination for convenience, as determined by the subject agency, or for lack of budgetary appropriation provided for the subject agency. Some government contracts also may be one-time events, such as in the case of some personal identification systems in non-U.S. markets involving voter registration programs. In such cases, we may generate substantial revenue that may not be subject to future renewal. Moreover, government contracts result from purchasing decisions made by public sector agencies that may be subject to political influence, unusual procurement procedures, strict legal requirements, budget changes and cutbacks during economic downturns, variations in appropriations cycles, and protests of contract awards. Additionally, some governmental authorities require performance bonds that we are obligated to maintain during the life of the contract. Often, the terms of these bonds require that we maintain large restricted cash reserves as a guarantee, reducing our ability to use these funds for our other business purposes. Even with the availability of such cash reserve guarantees, we may not be able to obtain such performance bond underwriting at a favorable rate or at all. In addition, these performance bonds may provide for security interests covering our receivables or other assets, which could cause additional financing to be more difficult or more expensive to obtain.

Our failure to be able to provide such performance bonds may preclude our ability to bid on new government contracts or maintain our existing contracts for their full terms. The size, nature and purpose of, and the risks and uncertainties associated with, public sector contracts can potentially cause our quarterly results to fluctuate and anticipated revenue to decrease significantly.

A significant portion of our business depends on contracts with fixed price terms. In the event of cost overruns in connection with such contracts, our margins may be adversely affected.

In addition to our normal price-per-card issuance contracts, we occasionally enter into agreements to sell entire systems or portions of a system for an agreed upon price. These contracts normally do not have clauses that allow for recovery of cost overruns. Under these contracts, we provide specific tasks for a specific price and are typically paid on a milestone basis. We have experienced low margins or losses on some of these contracts in the recent past. Such contracts involve greater financial risks because we bear the risk if actual project costs exceed the amounts we are paid under the contracts.

We may decline to pursue new, or renew existing, business opportunities in secure ID systems markets due to objectionable terms required by the contracting agencies, or we may agree to objectionable contract terms for competitive reasons.

Government agencies sometimes insist on unduly onerous terms in their contracts with vendors of secure ID issuance systems. For example, it is customary for state agencies to require that a vendor fund the capital-intensive initial deployment of a driver license issuance system (the costs of which the vendor normally recoups over the life of the contract in per-card fees), while reserving the right to terminate the contract for convenience. Similarly, in connection with intellectual property rights, a contract may require that our pre-existing issuance system software be written in a different language and a state may then argue that it falls within the class of works for which it owns the copyright, enabling the state to turn the Digimarc-authored software over to one of our competitors, dedicate it to the public domain, or otherwise use the software in a manner detrimental to our business. Objectionable contract terms may lead us to decline to bid on identification issuance systems to new customers, or to decline to retain business with customers we have historically served, which could reduce our market share and lower our revenues or profits. In addition, if we decline to retain business with customers we have historically served, it could result in the accelerated depreciation of intangible assets. Alternatively, we may decide to accept at least some level of objectionable terms rather than cede an important contract to a competitor, which could also lower our revenues or profits.

A loss of a material supplier could have a material adverse effect on our ability to perform effectively under some of our contracts.

We are materially dependent on a limited number of third parties to produce systems or assemblies necessary for us to produce some of our products. While we strive to have alternative suppliers provide us with many of our products, a loss of one or more of such suppliers could have a material adverse effect on our ability to perform effectively, if at all, under some of our contracts.

We are subject to risks encountered by companies developing and relying upon new technologies, products and services for substantial amounts of their growth or revenue.

Our business and prospects must be considered in light of the risks and uncertainties to which companies with new and rapidly evolving technologies, products and services, such as digital watermarking, are exposed. These risks include the following:

- We may be unable to develop sources of new revenue or sustainable growth in revenue because our current and anticipated technologies, products and services may be inadequate or may be unable to attract or retain customers;

- The intense competition and rapid technological change in our industry could adversely affect the market's acceptance of our existing and new products and services; and
- We may be unable to develop and maintain new technologies upon which our existing and new products and services are dependent in order for our products and services to be sustainable and competitive and in order for us to expand our revenue and business.

Some of our key technologies are in the development stage. Consequently, products incorporating these key technologies are undergoing technological change and are in the early stage of introduction in the marketplace. Delays in the adoption of these products or adverse competitive developments may result in delays in the development of new revenue sources or the growth in our revenue. In addition, we may be required to incur unanticipated capital expenditures in the event product changes or improvements are required. Additionally, new industry standards might redefine the products that we are able to sell, especially if these products are only in the prototype stage of development. If product changes or improvements are required, success in marketing these products and achieving profitability from these products could be delayed or halted. We also may be required to fund such changes or improvements out of operating income, which could adversely affect our profitability.

We may not be able to protect adequately our intellectual property, and we may be subject to infringement claims and other litigation, which could adversely affect our business.

Our success depends in part on licensing our proprietary technologies. To protect our growing intellectual property investments, we rely on a combination of patent, copyright, trademark and trade secret rights, confidentiality procedures and licensing arrangements. Unlicensed copying and use of our intellectual property or illegal infringements of our intellectual property rights represent losses of revenue to us.

We face risks associated with our patent position, including the potential and sometimes actual need from time to time to engage in significant legal proceedings to enforce our patents, the possibility that the validity or enforceability of our patents may be denied, and the possibility that third parties will be able to compete against us without infringing our patents. Budgetary concerns may cause us not to file, or continue, litigation against known infringers of our patent rights, or may cause us not to file for, or pursue, patent protection for all of our inventive technologies in jurisdictions where they may have value. Some governmental entities that might infringe our intellectual property rights may enjoy sovereign immunity from such claims. Failure to reliably enforce our patent rights against infringers may make licensing more difficult. If we fail to protect our intellectual property rights and proprietary technologies adequately, if there are changes in applicable laws that are adverse to our interests, or if we become involved in litigation relating to our intellectual property rights and proprietary technologies or relating to the intellectual property rights of others, our business could be seriously harmed because the value ascribed to our intellectual property could diminish and result in a lower stock price or we may incur significant costs in bringing legal proceedings against third parties who are infringing our patents.

Effective protection of intellectual property rights may be unavailable or limited, both in the United States and in other countries. Patent protection throughout the world is generally established on a country-by-country basis. We have applied for patent protection both in the United States and in various other countries. However, we cannot assure you that pending patents will be issued or that issued patents will be valid or enforceable. Failure to obtain such patents or failure to enforce those patents that are obtained may result in a loss of revenue to us. We cannot assure you that the protection of our proprietary rights will be adequate or that our competitors will not independently develop similar technologies, duplicate our services or design around any of our patents or other intellectual property rights we hold.

We are the exclusive licensee under some third-party patents, and may need the assistance of these parties if we choose to enforce any of these patent rights. The cooperation of these third parties cannot be assured even though we rely on some of these technologies for our products.

As more companies engage in business activities relating to personal identification technologies and digital watermarking, and develop corresponding intellectual property rights, it is increasingly likely that claims may arise which assert that some of our products or services infringe upon other parties' intellectual property rights. These claims could subject us to costly litigation, divert management resources and result in the invalidation of our intellectual property rights. These claims may require us to pay significant damages, cease production of infringing products, terminate our use of infringing technologies or develop non-infringing technologies. In these circumstances, continued use of our technologies may require that we acquire licenses to the intellectual property that is the subject of the alleged infringement, and we might not be able to obtain these licenses on commercially reasonable terms or at all. Our use of protected technologies may result in liability that threatens our continuing operation.

Some of our contracts include provisions by which we assure non-infringement of third-party intellectual property rights. As deployment of our technology increases, and more companies enter our markets, the likelihood of a third party lawsuit resulting from such indemnification increases. If an infringement arose in a context governed by such a contract, we may have to refund to our customer amounts already paid to us or pay significant damages, or we may be sued by the party allegedly infringed upon. Similarly, as we seek to broaden the number of companies licensed under our patent portfolio, some may seek contractual assurances that we will pursue by litigation if necessary their competitors who use our patented technology but are not licensed to do so. Compliance with any such contract provisions may require that we pursue litigation where our costs exceed our likely recovery.

As part of our confidentiality procedures, we generally enter into non-disclosure agreements with our employees, directors, consultants and corporate partners, and attempt to control access to and distribution of our technologies, solutions, documentation and other proprietary information. Despite these procedures, third parties could copy or otherwise obtain and make unauthorized use of our technologies, solutions or other proprietary information or independently develop similar technologies, solutions or information. The steps that we have taken to prevent misappropriation of our solutions, technologies or other proprietary information may not prevent their misappropriation, particularly outside the United States where laws or law enforcement practices may not protect our proprietary rights as fully as in the United States.

Products that we are developing for new secure identification markets and components and subsystems markets may not be accepted as quickly as we have projected or at all, which may negatively impact our revenues, margins, earnings and stock price.

We have invested significant time and resources in product development activities for new secure identification markets, including designing and developing numerous enhancements to our driver license systems and improving our cards' ability to withstand intrusions or alterations without detection. At present, our new products include Digimarc Camera Tower, Digimarc Capture Software, Digimarc Image Server, Digimarc ID Validation Suite (IDVS), Digimarc IDMarc, Digimarc Biometric Identification solution and Digimarc Document Inspector. If we do not experience a timely, positive reaction from issuing authorities to our new offerings, our projected revenues, margins and earnings may be negatively impacted.

We are engaged in several lawsuits alleging violations of securities law and cannot predict the outcome or ultimate cost of these actions with certainty.

We currently are engaged in litigation relating to the initial public offering of our securities, in addition to the class actions filed against us in connection with our previously announced accounting errors. These matters are discussed in greater detail in Part II, Item 1 (Legal Proceedings) of this Quarterly Report on Form 10-Q and in Note 5 (Commitments and Contingencies) of the Notes to Consolidated Financial Statements included in this Quarterly Report on Form 10-Q. We have incurred significant costs relating to these matters. Due to the inherent uncertainties of such litigation, the ultimate cost and outcome cannot be predicted.

If a judgment were to be entered against the Company and our director and officer liability insurance was inadequate or unavailable, the obligation to pay the judgment may materially harm our business and financial condition.

Our director and officer liability insurance policies provide protection against certain liabilities relating to the securities class action and derivative lawsuits against us and certain of our officers and directors up to prescribed policy limits. If these policies do not adequately cover expenses and certain liabilities relating to these lawsuits, our financial condition could be materially harmed. In addition, if this insurance coverage becomes unavailable to us or premiums increase significantly in the future, it could make it more difficult for us to retain and attract officers and directors and could expose us to potentially self-funding certain future liabilities ordinarily mitigated by director and officer liability insurance.

We may be required to invest significant additional time and resources to comply with the requirements of Section 404 of the Sarbanes-Oxley Act of 2002, which could harm our operating results or cause us to fail to meet our reporting obligations.

In 2004, we discovered certain material weaknesses in our internal controls and procedures, which we remediated. Since then, we have deployed significant resources to design and implement new and enhanced controls and procedures. We cannot be certain, however, that other deficiencies will not arise or be identified in the future, particularly if we experience rapid growth or change in our business, including growth or change resulting from any future acquisition. Any failure to maintain adequate controls or to adequately implement required new or improved controls could harm our operating results or cause us to fail to meet our reporting obligations in a timely and accurate manner.

There can be no assurance that our disclosure controls and procedures will succeed in achieving their stated goals under all potential future conditions, regardless of how remote.

The SEC defines the term "disclosure controls and procedures" to mean a company's controls and other procedures that are designed to ensure that information required to be disclosed in the reports that it files or submits under the Securities Exchange Act of 1934 is recorded, processed, summarized and reported, within the time periods specified in the Commission's rules and forms. While our disclosure controls and procedures are designed to provide reasonable assurance of achieving their objectives, the design of any system of controls is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions, regardless of how remote. If our disclosure controls and procedures do not succeed in achieving their stated goals, our operating results could be harmed or we could fail to meet our reporting obligations in a timely and accurate manner.

ITEM 7A: QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Our exposure to market risk for changes in interest rates relates primarily to the increase or decrease in the amount of interest income we can earn on our investment portfolio and on the increase or decrease in the amount of any interest expense we must pay with respect to outstanding debt instruments. The risk associated with fluctuating interest expense is limited, however, to the exposure related to those debt instruments and credit facilities that are tied to market rates. We do not plan to use derivative financial instruments in our investment portfolio. We plan to ensure the safety and preservation of our invested principal funds by limiting default risk, market risk and investment risk. We plan to mitigate default risk by investing in low-risk securities. At December 31, 2006, we had an investment portfolio of money market funds, commercial securities and U.S. Government securities, including those classified as cash and cash equivalents, restricted cash, and short-term investments, of \$28.4 million. The original maturities of our investment portfolio range from 4 to 62 days with an average interest rate of 5.4%. We had capital lease obligations of approximately \$1.0 million at December 31, 2006. If market interest rates were to increase immediately and uniformly by 10% from levels as of December 31, 2006, the decline of the fair market value of the fixed income portfolio and loans outstanding would not be material. To a lesser extent, the Company is also subject to foreign currency exchange risk in the form of exposures to fluctuations in currency exchange rates.

ITEM 8: FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

The consolidated financial statements and notes thereto of Digimarc Corporation and its subsidiaries as of December 31, 2006 and 2005 and for the three year period ended December 31, 2006 and the independent registered public accounting firm reports thereon are set forth on the F pages of this Annual Report on Form 10-K and are incorporated herein by reference.

ITEM 9: CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None.

ITEM 9A: CONTROLS AND PROCEDURES

The certifications of our principal executive officer and the principal financial officer required in accordance with Section 302 of the Sarbanes-Oxley Act of 2002 are attached as exhibits to this Form 10-K. The disclosures set forth in this Item 9A contain information concerning the evaluation of our internal controls and procedures, and changes in internal control over financial reporting, referred to in paragraph 4 of the certifications. This Item 9A should be read in conjunction with the officer certifications for a more complete understanding of the topics presented.

Evaluation of Disclosure Controls and Procedures

The SEC defines the term "disclosure controls and procedures" to mean a company's controls and other procedures that are designed to ensure that information required to be disclosed in the reports that it files or submits under the Securities Exchange Act of 1934 is recorded, processed, summarized and reported, within the time periods specified in the Commission's rules and forms. While our disclosure controls and procedures are designed to provide reasonable assurance of achieving their objectives, the design of any system of controls is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions, regardless of how remote. Our management, with the participation of our principal executive officer and principal financial officer, carried out a separate evaluation of the effectiveness of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) of the

Securities Exchange Act of 1934) as of December 31, 2006, which included an evaluation of disclosure controls and procedures applicable to the period covered by the filing of this periodic report. Based on the evaluation of the effectiveness of our disclosure controls and procedures by our management as of December 31, 2006, our principal executive officer and principal financial officer have concluded that our disclosure controls and procedures were effective to ensure that information required to be disclosed by us in the reports that we file or submit under the Securities Exchange Act of 1934 is accumulated and communicated to our management, including our principal executive and principal financial officers, or persons performing similar functions, as appropriate to allow timely decisions regarding required disclosure.

Management's Report on Internal Control Over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Rules 13a-15(f) and 15d-15(f) under the Securities Exchange Act of 1934. Our internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with U.S. GAAP. Our internal control over financial reporting included those policies and procedures that:

- Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of our assets;
- Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with U.S. GAAP, and that receipts and expenditures are being made only in accordance with authorizations from our management and directors; and
- Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of our assets that could have a material effect on the financial statements.

With the participation of our principal executive officer and our principal financial officer, our management conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework established in Internal Control - Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission, (COSO). Based on this evaluation, our management has concluded that our internal control over financial reporting was effective as of December 31, 2006.

Any control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are knowledge and resource constraints in any such system, and a large number of complex permutations of facts, circumstances, accounting policies, procedural implications, and business practices that must be considered. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty, and breakdowns can occur because of a simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the controls. The design of any system of controls also is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Over time, the control systems we develop may become inadequate because of changes in conditions, or the degree of compliance with the policies or procedures may deteriorate.

Management is committed to continue monitoring our internal controls over financial reporting and will modify or implement additional controls and procedures that may be required to ensure the ongoing integrity of our financial statements.

Management's assessment of the effectiveness of our internal control over financial reporting as of December 31, 2006 has been audited by Grant Thornton LLP, an independent registered public accounting firm. Their attestation report is included herein.

Changes to the Internal Control Environment

There have not been any changes in our internal control environment during the Company's fiscal quarter ended December 31, 2006 that have materially affected or are reasonably likely to materially affect our internal control over financial reporting.

55

Report of Independent Registered Public Accounting Firm

**To the Board of Directors and Stockholders
Digimarc Corporation:**

We have audited management's assessment, included in the accompanying Management's Report on Internal Controls Over Financial Reporting set forth in item 9(A), that Digimarc Corporation (a Delaware Corporation) maintained effective internal control over financial reporting as of December 31, 2006, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Digimarc Corporation's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States of America. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with accounting principles generally accepted in the United States of America, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, management's assessment that Digimarc Corporation maintained effective internal control over financial reporting as of December 31, 2006, is fairly stated, in all material respects, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Also in our opinion, Digimarc Corporation has maintained in all material respects, effective internal control over financial reporting as of December 31, 2006, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheet of Digimarc Corporation and subsidiaries as of December 31, 2006 and 2005, and the related consolidated statement of operations, stockholders' equity, and cash flows for each of the two years in the period ended December 31, 2006 and our report dated March 8, 2007 expressed an unqualified opinion on those financial statements.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of
Digimarc Corporation:

We have audited the accompanying consolidated balance sheets of Digimarc Corporation (a Delaware Corporation) and subsidiaries as of December 31, 2006 and 2005, and the related consolidated statements of operations, stockholders' equity, and cash flows for each of the two years in the period ended December 31, 2006. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Digimarc Corporation and subsidiaries as of December 31, 2006 and 2005, and the results of their operations and their cash flows for each of the two years in the period ended December 31, 2006 in conformity with accounting principles generally accepted in the United States of America.

As discussed in Note 1 to consolidated financial statements, the Company has adopted Statement of Financial Accounting Standards No. 123(R), *Share-Based Payments* (Revised 2004) during 2006.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the effectiveness of Digimarc Corporation and its subsidiaries' internal control over financial reporting as of December 31, 2006, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated March 8, 2007 expressed an unqualified opinion on management's assessment, and an unqualified opinion on the effective operation of internal control over financial reporting.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and
Stockholders of Digimarc Corporation:

We have audited the accompanying consolidated statements of operations, stockholders' equity, and cash flows of Digimarc Corporation and subsidiaries for the year ended December 31, 2004. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the operations and cash flows of Digimarc Corporation and subsidiaries for the year ended December 31, 2004, in conformity with U.S. generally accepted accounting principles.
