Dear Shareholder:
The U.S. economy slowed during the twelve-month fiscal reporting period ended July 31, 2012. Growth was deterred by a variety of economic and geopolitical problems, notably Europe s deepening sovereign debt crisis, a tepid U.S. labor market and increasing gasoline prices. In response, investors shifted assets into the perceived safe haven of U.S. Treasury bonds triggering yields to fall to record lows.
Twelve-Month Period in Review through July 31, 2012
For the twelve-month period ended July 31, 2012:
• PIMCO Income Strategy Fund returned 10.78% on net asset value ( NAV ) and 12.02% on market price.
• PIMCO Income Strategy Fund II returned 11.16% on NAV and 16.33% on market price.
The Barclays U.S. Credit Index, a measure of high quality corporate bond performance, advanced 9.87% and the Barclays U.S. Corporate High Yield Bond Index, a measure of below investment-grade corporate bond performance, rose 8.06% during the reporting period. Government bonds, as represented by the Barclays Long Term Treasury Index, returned 16.77%. The Barclays U.S. Aggregate Bond Index, a broad credit market measure of government and corporate securities, rose 7.25%, and mortgage-backed securities, reflected by the Barclays Fixed Rate MBS Index, advanced 4.91%. As for stocks, the Standard & Poor s 500 Index increased 9.13% during the twelve-month fiscal period.
U.S. gross domestic product (GDP), the value of goods and services produced in the country, the broadest measure of economic activity and the principal indicator of economic performance, expanded at an annual rate of 1.8% between July and September 2011, and at a robust 4.1% annual rate between October and December 2011. Growth slowed to a 2.0% annual rate between January and March 2012, and to 1.5% (preliminary estimate) between April and June, 2012.
Signs of a slowdown were abundant with dismal U.S. consumer spending and the manufacturing sector contracting for the first time in nearly three years. The period opened with robust private sector hiring; however, hiring diminished throughout the period. U.S. unemployment fell from 9.1% to 8.3%, although the majority of the decline occurred during the first six months of the reporting period.
PIMCO Income Strategy Fund PIMCO Income Strategy Fund II Annual Report   7.31.12

Outlook
There is growing uncertainty over future levels of federal taxes and spending. A series of tax cuts are scheduled to expire on December 31, 2012 and major spending reductions are planned to begin in January 2013. The prospect of higher taxes, reduced spending, or both, would likely have an adverse impact on the economy in 2013.
Troubles abroad also contributed to the U.S. economic slowdown. Eurozone unemployment reached 11.2% as a combination of sovereign debt woes, austerity measures, and tax increases took a toll. China s growth rate has also contracted.
Corporate earnings growth also declined on these concerns. The U.S. Federal Reserve (the Fed ) indicated that it would maintain low interest rates at least through late 2014 and suggested that it may unveil a new round of quantitative easing to stimulate the economy. In testimony to Congress, Fed chairman Ben Bernanke warned of significant downside risks to the economic outlook, including strains in global financial markets.
For specific information on the Funds and their performance, please review the following pages. If you have any questions regarding the information provided, we encourage you to contact your financial advisor or call the Funds—shareholder servicing agent at (800) 254-5197. In addition, a wide range of information and resources is available on our website, www.allianzinvestors.com/closedendfunds.
Together with Allianz Global Investors Fund Management LLC, the Funds investment manager, and Pacific Investment Management Company LLC ( PIMCO ), the Funds sub-adviser, we thank you for investing with us.
We remain dedicated to serving your investment needs.
Sincerely,

Brian S. Shlissel President & CEO

# PIMCO Income Strategy Fund/PIMCO Income Strategy Fund II Fund Insights

July 31, 2012 (unaudited)

For the twelve months ended July 31, 2012, PIMCO Income Strategy Fund returned 10.78% on net asset value ( NAV ) and 12.02% on market price.

For the twelve months ended July 31, 2012, PIMCO Income Strategy Fund II returned 11.16% on NAV and 16.33% on market price.

The unmanaged Barclays U.S. Aggregate Bond Index and Barclays U.S. Credit Index returned 7.25% and 9.87%, respectively, during the reporting period.

The overall U.S. fixed income market experienced periods of volatility, but ultimately generated solid returns. During the first two months of the period, the spread sectors (non-U.S. Treasuries) performed poorly as a result of Standard & Poor's downgrade of U.S. government securities, the ongoing European sovereign debt crisis and signs that global economic growth was decelerating. However, during the next six months, investor risk appetite was generally robust. This reversal in investor sentiment was triggered by signs that the U.S. economy was gaining some traction and hopes for progress in Europe. Risk aversion returned in April and May 2012 as a result of fears of contagion from the European sovereign debt crisis and concerns that the U.S. economy may be hitting a soft patch. This resulted in increased risk aversion and falling Treasury yields. The spread sectors rallied in June and July 2012 providing some signs of progress in Europe. There were also expectations of another round of quantitative easing by the Federal Reserve (the Fed ) after it extended Operation Twist (a program whereby the Fed purchases longer-term Treasuries and sells an equal amount of shorter-term Treasuries in an attempt to place downward pressure on interest rates and stimulate the economy) until the end of 2012. All told, during the twelve months ended July 31, 2012, both short- and long-term Treasuries declined and the yield curve flattened.

While there were several periods of weakness as a result of increased risk aversion, these were generally temporary setbacks and the U.S. corporate bond market posted strong returns during the reporting period. Supporting

July 31, 2012 (unaudited) (continued)

the corporate bond market were corporate profits that exceeded expectations, strengthening corporate balance sheets that were flush with cash and overall solid demand from investors seeking to generate incremental yield in a low interest rate environment.

#### Sector exposures largely contributed to the Funds performance

During the reporting period, the Funds outperformed the broad U.S. fixed income market (as measured by the Barclays U.S. Aggregate Bond Index) as well as the U.S. credit market (as measured by the Barclays U.S. Credit Index).

An allocation to Build America Bonds was rewarded, as these subsidized taxable municipal securities generally outperformed the broader market. An allocation to non-agency mortgage-backed securities helped performance, as these bonds outperformed the broader market, supported by positive supply/demand technicals. Although the financial sector underperformed the broad credit market during the past twelve months, the Funds emphasis on select high quality financial issues helped performance, as those bonds performed relatively well during the reporting period. Security selection within the insurance sector was also additive to performance. Finally, the Funds overweight duration positioning was beneficial for performance as rates trended lower during the fiscal annual period ended July 31, 2012.

On the downside, an underweighting to utilities detracted from results as this sector outperformed the overall credit market. Security selection, however, within the sector helped to partially offset the negative impact from the underweight exposure to utilities.

Moody s Ratings

(as a % of total investments)

(1) Past performance is no guarantee of future results. Total return is calculated by determining the percentage change in NAV or market price (as applicable) in the specified period. The calculation assumes that all income dividends, capital gain and return of capital distributions, if any, have been reinvested. Total return does not reflect broker commissions or sales charges in connection with the purchase or sale of Fund shares. Total return for a period of more than one year represents the average annual total return.

Performance at market price will differ from results at NAV. Although market price returns typically reflect investment results over time, during shorter periods returns at market price can also be influenced by factors such as changing views about the Funds, market conditions, supply and demand for each Fund s shares, or changes in each Fund s dividends.

An investment in the Funds involves risk, including the loss of principal. Total return, market price, market price yield and NAV will fluctuate with changes in market conditions. This data is provided for information purposes only and is not intended for trading purposes. Closed-end funds, unlike open-end funds, are not continuously offered. There is a one time public offering and once issued, shares of closed-end funds are traded in the open market through a stock exchange. NAV is equal to total assets attributable to common shareholders less total liabilities divided by the number of common shares outstanding. Holdings are subject to change daily.

- (2) Market Price Yield is determined by dividing the annualized current monthly dividend per common share (comprised of net investment income) by the market price per common share at July 31, 2012.
- (3) Represents Preferred Shares and Reverse Repurchase Agreements (collectively Leverage) outstanding, as a percentage of total managed assets. Total managed assets refer to total assets (including assets attributable to Leverage) minus accrued liabilities (other than liabilities representing Leverage).

Cash and foreign currency, at beginning of year	3,547,448	10,196,455
Cash and foreign currency, at end of year	\$661,257	\$17,184

<sup>\*</sup> Included in operating expenses is cash paid by Income Strategy and Income Strategy II for interest primarily related to participation in reverse repurchase agreement transactions of \$481,181 and \$542,140, respectively.

PIMCO Income Strategy Fund

See accompanying Notes to Financial Statements. | 7.31.12 | PIMCO Income Strategy Fund II Annual Report 27

PIMCO Income Strategy Fund/PIMCO Income Strategy Fund II Notes to Financial Statements July 31, 2012

#### 1. Organization and Significant Accounting Policies

PIMCO Income Strategy Fund ( Income Strategy ) and PIMCO Income Strategy Fund II ( Income Strategy II ), each a Fund and collectively the Funds , were organized as Massachusetts business trusts on June 19, 2003 and June 30, 2004, respectively. Prior to commencing operations on August 29, 2003 and October 29, 2004, respectively, Income Strategy and Income Strategy II had no operations other than matters relating to their organization and registration as diversified, closed-end management investment companies registered under the Investment Company Act of 1940 and the rules and regulations thereunder, as amended. Allianz Global Investors Fund Management LLC (the Investment Manager ) serves as the Funds investment manager and is an indirect, wholly-owned subsidiary of Allianz Asset Management of America L.P. ( AAM ). AAM is an indirect, wholly-owned subsidiary of Allianz SE, a publicly traded European insurance and financial services company. Each Fund has authorized an unlimited amount of common shares with \$0.00001 par value.

Each Fund s investment objective is to seek high current income, consistent with the preservation of capital. There can be no assurance that the Funds will meet their stated objectives.

The preparation of the Funds financial statements in accordance with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts and disclosures in each Fund s financial statements. Actual results could differ from those estimates.

In the normal course of business, the Funds enter into contracts that contain a variety of representations that provide general indemnifications. The Funds maximum exposure under these arrangements is unknown as this would involve future claims that may be made against the Funds that have not yet occurred.

In December 2011, the Financial Accounting Standards Board issued Accounting Standards Update No. 2011-11, Disclosures About Offsetting Assets and Liabilities , which requires enhanced disclosures that will enable users to evaluate the effect or potential effect of netting arrangements on an entity s financial position, including the effect or potential effect of rights of setoff associated with certain financial instruments and derivative instruments. The amendments are effective for fiscal years beginning on or after January 1, 2013. The Funds management is currently evaluating the effect that the guidance may have on its financial statements.

The following is a summary of significant accounting policies consistently followed by the Funds:

#### (a) Valuation of Investments

Portfolio securities and other financial instruments for which market quotations are readily available are stated at market value. Market value is generally determined on the basis of last reported sales prices, or if no sales are reported, on the basis of quotes obtained from a quotation reporting system, established market makers, or independent pricing services. The Funds investments are valued daily using prices supplied by an independent pricing service or dealer quotations, or by using the last sale price on the exchange that is the primary market for such securities, or the mean between the last quoted bid and ask price. Independent pricing services use information provided by market makers or estimates of market values obtained from yield data relating to investments or securities with similar characteristics.

The Board of Trustees has adopted methods for valuing portfolio securities and other financial derivative instruments in circumstances where market quotes are not readily available, and has delegated the responsibility for applying the valuation methods to the Investment Manager and Pacific Investment Management Company LLC (the Sub-Adviser), an affiliate of the Investment Manager. The Valuation Committee has been established by the Board of Trustees to oversee the implementation of the Funds valuation methods and to make fair value determinations on behalf of the Board of Trustees as instructed. The Sub-Adviser monitors the continual appropriateness of methods applied and determines if adjustments should be made in light of market changes, events affecting the issuer, or other factors. If the Sub-Adviser determines that a valuation method may no longer be appropriate, another valuation method may be selected, or the Valuation Committee will be convened to consider the matter and take any appropriate action in accordance with procedures set forth by the Board of Trustees. The Board of Trustees shall review the appropriateness of the valuation methods and these methods may be amended or supplemented from time to time by the Valuation Committee.

Benchmark pricing procedures are used as the basis for setting the base price of a fixed-income security and for subsequently adjusting the price proportionally to market value changes of a pre-determined security deemed to be comparable in duration, generally a U.S. Treasury or sovereign note based on country of issuance. The base price may be a broker-dealer quote, transaction price, or an internal value as derived by analysis of market data. The base price

PIMCO Income Strategy Fund
28 PIMCO Income Strategy Fund II Annual Report | 7.31.12

PIMCO Income Strategy Fund/PIMCO Income Strategy Fund II Notes to Financial Statements July 31, 2012

#### 1. Organization and Significant Accounting Policies (continued)

of the security may be reset on a periodic basis based on the availability of market data and procedures approved by the Valuation Committee. The validity of the fair value is reviewed by the Sub-Adviser on a periodic basis and may be amended as the availability of market data indicates a material change.

If third party evaluated vendor pricing is neither available nor deemed to be reliable of fair value, the Sub-Adviser may elect to obtain market quotations (broker quotes) directly from a broker-dealer.

Short-term securities maturing in 60 days or less are valued at amortized cost, if their original term to maturity was 60 days or less, or by amortizing their value on the 61st day prior to maturity, if the original term to maturity exceeded 60 days.

Investments initially valued in currencies other than the U.S. dollar are converted to the U.S. dollar using exchange rates obtained from pricing services. As a result, the net asset value ( NAV ) of each Fund s shares may be affected by changes in the value of currencies in relation to the U.S. dollar. The value of securities traded in markets outside the United States or denominated in currencies other than the U.S. dollar may be affected significantly on a day that the New York Stock Exchange ( NYSE ) is closed.

The prices used by the Funds to value securities may differ from the value that would be realized if the securities were sold, and these differences could be material to the Funds financial statements. Each Fund s NAV is normally determined as of the close of regular trading (normally, 4:00 p.m. Eastern time) on the NYSE on each day the NYSE is open for business.

#### (b) Fair Value Measurements

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability (*i.e.* the exit price ) in an orderly transaction between market participants. The three levels of the fair value hierarchy are described below:

- Level 1 quoted prices in active markets for identical investments that the Funds have the ability to access
- Level 2 valuations based on other significant observable inputs, which may include, but are not limited to, quoted prices for similar assets or liabilities, interest rates, yield curves, volatilities, prepayment speeds, loss severities, credit risks and default rates or other market corroborated inputs
- Level 3 valuations based on significant unobservable inputs (including the Sub-Adviser s or Valuation Committee s own assumptions and single broker quotes in determining the fair value of investments)

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities. The following are certain inputs and techniques that the Funds generally use to evaluate how to classify each major category of assets and liabilities for Level 2 and Level 3, in accordance with Generally Accepted Accounting Principles (GAAP).

Equity Securities (Common and Preferred Stock) Equity securities traded in inactive markets are valued using inputs which include broker-dealer quotes, recently executed transactions adjusted for changes in the benchmark index, or evaluated price quotes received from independent pricing services that take into account the integrity of the market sector and issuer, the individual characteristics of the security, and information received from broker-dealers and other market sources pertaining to the issuer or security. To the extent that these inputs are observable, the values of equity securities are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

<u>U.S. Treasury Obligations</u> U.S. Treasury obligations are valued by independent pricing services based on pricing models that evaluate the mean between the most recently quoted bid and ask price. The models also take into consideration data received from active market makers and broker-dealers, yield curves, and the spread over comparable U.S. Treasury issues. The spreads change daily in response to market conditions and are generally obtained from the new issue market and broker-dealer sources. To the extent that these inputs are observable, the values of U.S. Treasury obligations are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Government Sponsored Enterprise and Mortgage-Backed Securities Government sponsored enterprise and mortgage-backed securities are valued by independent pricing services using pricing models based on inputs that include issuer type, coupon, cash flows, mortgage prepayment projection tables and Adjustable Rate Mortgage evaluations that incorporate index data, periodic and life caps, the next coupon reset date, and the convertibility of the bond. To the

PIMCO Income Strategy Fund
7.31.12 | PIMCO Income Strategy Fund II Annual Report 29

PIMCO Income Strategy Fund/PIMCO Income Strategy Fund II Notes to Financial Statements July 31, 2012

#### 1. Organization and Significant Accounting Policies (continued)

extent that these inputs are observable, the values of government sponsored enterprise and mortgage-backed securities are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

<u>Municipal Bonds</u> Municipal bonds are valued by independent pricing services based on pricing models that take into account, among other factors, information received from market makers and broker-dealers, current trades, bid-want lists, offerings, market movements, the callability of the bond, state of issuance, benchmark yield curves, and bond insurance. To the extent that these inputs are observable, the values of municipal bonds are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Corporate Bonds & Notes 
Corporate bonds and notes are generally comprised of two main categories: investment grade bonds and high yield bonds. Investment grade bonds are valued by independent pricing services using various inputs and techniques, which include broker-dealer quotations, live trading levels, recently executed transactions in securities of the issuer or comparable issuers, and option adjusted spread models that include base curve and spread curve inputs. Adjustments to individual bonds can be applied to recognize trading differences compared to other bonds issued by the same issuer. High yield bonds are valued by independent pricing services based primarily on broker-dealer quotations from relevant market makers and recently executed transactions in securities of the issuer or comparable issuers. The broker-dealer quotations received are supported by credit analysis of the issuer that takes into consideration credit quality assessments, daily trading activity, and the activity of the underlying equities, listed bonds and sector-specific trends. To the extent that these inputs are observable, the values of corporate bonds and notes are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Asset-Backed Securities and Collateralized Mortgage Obligations Asset-backed securities and collateralized mortgage obligations are valued by independent pricing services using pricing models based on a security s average life volatility. The models also take into account tranche characteristics such as coupon, average life, collateral types, ratings, the issuer and tranche type, underlying collateral and performance of the collateral, and discount margin for certain floating rate issues. To the extent that these inputs are observable, the values of asset-backed securities and collateralized mortgage obligations are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

<u>Forward Foreign Currency Contracts</u> Forward foreign currency contracts are valued by independent pricing services using various inputs and techniques, which include broker-dealer quotations, actual trading information and foreign currency exchange rates gathered from leading market makers and foreign currency exchange trading centers throughout the world. To the extent that these inputs are observable, the values of forward foreign currency contracts are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

Interest Rate Swaps OTC interest rate swaps are valued by independent pricing services using pricing models that are based on real-time intraday snapshots of relevant interest rate curves that are built using the most actively traded securities for a given maturity. The pricing models also incorporate cash and money market rates. In addition, market data pertaining to interest rate swaps is monitored regularly to ensure that interest rates are properly depicting the current market rate. Centrally cleared interest rate swaps are valued at the price determined by the relevant exchange. To the extent that these inputs are observable, the values of interest rate swaps are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

<u>Credit Default Swaps</u> OTC credit default swaps are valued by independent pricing services using pricing models that take into account, among other factors, information received from market makers and broker-dealers, default probabilities from index specific credit spread curves, recovery rates, and cash flows. Centrally cleared credit default swaps are valued at the price determined by the relevant exchange. To the extent that these inputs are observable, the values of credit default swaps are categorized as Level 2. To the extent that these inputs are unobservable, the values are categorized as Level 3.

PIMCO Income Strategy Fund II Annual Report | 7.31.12

# PIMCO Income Strategy Fund/PIMCO Income Strategy Fund II Notes to Financial Statements

July 31, 2012

#### 1. Organization and Significant Accounting Policies (continued)

The valuation techniques used by the Funds to measure fair value during the year ended July 31, 2012 maximized the use of observable inputs and minimized the use of unobservable inputs.

The Funds policy is to recognize transfers between levels at the end of the reporting period. An investment asset s or liability s level within the fair value hierarchy is based on the lowest level input, individually or in aggregate, that is significant to fair value measurement. The objective of fair value measurement remains the same even when there is a significant decrease in the volume and level of activity for an asset or liability and regardless of the valuation techniques used. Assets categorized as Level 1 or 2 as of period end may have been transferred between Levels 1 and 2 since the prior period due to changes in the valuation method utilized in valuing the investments.

A summary of the inputs used at July 31, 2012 in valuing Income Strategy s assets and liabilities is listed below (refer to the Schedules of Investments and Notes 5(a), 5(b) and 5(c) for more detailed information on Investments in Securities and Other Financial Instruments):

		Level 2 Other Significant	Level 3 Significant	
	Level 1	Observable	Unobservable	Value at
