**PTM Intersects Highest Grade Intercept to Date at Seagull**

Platinum Group Metals is pleased to announce that initial results from the recently completed 2005 drill program on its Seagull Project have continued to demonstrate the continuity of the Reef horizons and has intersected the highest PGE grades to date from the Lower Dunite horizon. The areas to the north and north east remain open for expansion of the higher grade portion of this reef and Hole WM-05-22 has assays pending from this region.

The continuous reefs or layers at Seagull are exceptional for North America in that they have a consistent near 1:1 ratio of platinum to palladium, contrasted with much lower platinum content of most occurrences in North America. Since platinum is four times the value of palladium the more platinum the better.

Drill hole WM05-20, drilled 350 metres north of discovery hole WM01-09 (2.0 metres @ 2.27 g/t 3E) and 320 metres southwest of hole WM04-17 (results previously reported) intersected 0.44 metres grading 7.90 g/t Pt+Pd+Au (3.69 g/t Pt, 3.99 g/t Pd and 0.21 g/t Au) within broader intercepts of 1.72 metres grading 3.25 g/t 3E and 4.28 metres grading 1.77 g/t 3E, between 329.12 and 333.40 metres depth, marking the Lower Dunite Horizon. The 0.44 metre interval noted above is associated with Cu and Ni values of 0.47% and 0.33% respectively. This new intercept is the shallowest to date on this horizon and has one of the highest Pt:Pd ratios reported to date. Results for the other rarer platinum group elements of rhodium, osmium, iridium and ruthenium for this interval are pending.

The Lower Dunite is one of nine PGE enriched (> 0.3 g/t Pt+Pd) horizons which have been identified within the Seagull Intrusion. These horizons have now been traced over an area of over 700 x 850 metres and remain open for expansion. Additional intercepts of the Lower Dunite Horizon are tabulated below from holes WM05-18 and -19.

## Lower Dunite Intercepts

| Hole No. | From<br>m        | To<br>m          | Interval<br>M | Pt<br>ppb | Pd<br>ppb | Au<br>ppb | 3E<br>g/t | Pt:Pd<br>Ratio |
|----------|------------------|------------------|---------------|-----------|-----------|-----------|-----------|----------------|
| WM05-20  | 329.12           | 333.40           | 4.28          | 826       | 894       | 47        | 1.77      | 0.92           |
|          | <i>Including</i> |                  | 1.72          | 1526      | 1640      | 88        | 3.25      | 0.93           |
|          |                  | <i>Including</i> | 0.44          | 3690      | 3990      | 210       | 7.90      | 0.92           |

Edgar Filing: PLATINUM GROUP METALS LTD - Form 6-K

|         |                  |        |      |      |      |    |      |      |
|---------|------------------|--------|------|------|------|----|------|------|
| WM05-18 | 355.37           | 357.00 | 1.63 | 365  | 377  | 9  | 0.75 | 0.97 |
|         | <i>Including</i> |        | 0.15 | 1520 | 1615 | 17 | 3.19 | 0.94 |
| WM05-19 | 376.00           | 378.20 | 2.20 | 338  | 392  | 1  | 0.73 | 0.86 |
|         | <i>Including</i> |        | 0.75 | 646  | 745  | 2  | 1.39 | 0.87 |

Drill holes WM04-17, WM05-18, 19 and 20 (see hole location map at [www.platinumgroupmetals.net](http://www.platinumgroupmetals.net)) have intersected a local basement high which divides two deeper sub-basins within the Seagull Intrusion to the east and west of the high. Drill hole WM05-22, for which results are pending, was collared 200 metres west of hole WM05-20 and encountered the base of the Seagull Intrusion over 125 metres deeper than in hole WM05-20. Drill hole WM05-21, was an exploration hole 1500 meters to east of the area of current investigation on a gravity anomaly and it did not intersect the reefs.

The current drill results provide a clear target for further drilling to the north and west of the reported holes. Drill hole WM05-22 with assays pending is expected to support that targeting direction.

PTM may earn a 70% interest in the Seagull property under the terms of an option agreement from East West Resource Corp. (EWR -- TSXV) and Canadian Golden Dragon Resources Ltd. (CGG -- TSXV) announced on September 28, 2004.

### **Seagull Project Qualified Person and Quality Control and Assurance**

Darin Wagner, P.Geo., the Exploration Manager for PTM, is the qualified person for the Seagull Project. He is supervising the exploration drilling and sampling for PTM. He has more than 16 years relevant experience in resource exploration and evaluation. Mr. Wagner has directed PTM's PGE exploration activities in the Thunder Bay area for several years and also has experience in the Bushveld Complex, South Africa. As previously announced for other work, PTM has inserted standards, blanks and blind duplicates in the sample stream as part of its rigorous quality control and assurance procedures. Assays procedures and lab are as previously announced.

### **ABOUT PTM**

PTM is based in Vancouver BC, Canada and is focused on the exploration and development of platinum and palladium projects in Canada and South Africa. PTM is exploring and developing significant mineral rights in the PGE-rich northern and western limbs of the Bushveld Complex of South Africa including the large scale Western Bushveld Joint Venture with Anglo Platinum Corporation Limited north of Rustenburg, South Africa. Results are pending from PTM drilling programs now underway on the Northern Limb of the Bushveld at the War Springs Project (one drill rig operating) and from the Western Bushveld Joint Venture (three drill rigs operating). The Western Limb Joint Venture includes an inferred resource of 4.74 million ounces of platinum, palladium, rhodium and gold.

PTM holds a large land position in the area surrounding Canada's only primary platinum and palladium mine near Thunder Bay, Ontario. Additional results are pending from PTM drilling on the Seagull project northeast of Thunder Bay. The Company has a separate active joint venture with Anglo Platinum at Agnew Lake near Sudbury, Ontario.
