**Item 8.01 Other Events.**

On May 17, 2012, StemCells, Inc. (the "Company") issued a press release announcing the presentation of interim data from the Phase I/II clinical study of its HuCNS-SC cells (purified human neural stem cells) in patients with spinal cord injury. The data will be presented by Armin Curt, M.D., principal investigator for the study, on May 17, 2012, at the Interdependence 2012 Global SCI Conference, which is being held in Vancouver, British Columbia. A copy of this press release is attached hereto as Exhibit 99.1.

The interim data is from the first cohort of patients in the study, all of whom suffered a complete spinal cord injury in which there is no neurological function below the level of the injury. There were no abnormal clinical, electrophysiological or radiological responses to the cells, and all the patients were neurologically stable through the first four months following transplantation of the cells. Changes in sensitivity to touch were observed in two of the patients.

The data from multiple evaluations of the patients during this four month period have been reviewed by an independent Data Safety Monitoring Committee, which has recommended that the study advance to enrollment of patients with incomplete neurological injury. Enrollment is now underway and is open to patients in Europe, the United States and Canada with incomplete spinal cord injury.

**Item 9.01 Financial Statements and Exhibits.**

(d) Exhibits

Exhibit 99.1 Press Release, dated May 17, 2012, announcing interim data from the Company's clinical study of HuCNS-SC cells in patients with spinal cord injury.
