## Leveraged Index Return Notes®

Linked to the EURO STOXX 50® Index, due June 24, 2022

## Summary

The Leveraged Index Return Notes® Linked to the EURO STOXX 50® Index, due June 24, 2022 (the notes ) are our senior unsecured debt securities. Payments on the notes are fully and unconditionally guaranteed by BAC. The notes and the related guarantee are not insured by the Federal Deposit Insurance Corporation or secured by collateral. **The notes will rank equally with all of BofA Finance's other unsecured and unsubordinated debt, and the related guarantee will rank equally with all of BAC's other unsecured and unsubordinated obligations. Any payments due on the notes, including any repayment of principal, will be subject to the credit risk of BofA Finance, as issuer, and BAC, as guarantor.** The notes provide you a leveraged return if the Ending Value of the Market Measure, which is the EURO STOXX 50® Index (the Index ), is greater than the Starting Value. If the Ending Value of the Index is equal to or less than the Starting Value but greater than or equal to the Threshold Value, you will receive the principal amount of your notes. If the Ending Value is less than the Threshold Value, you will lose a portion, which could be significant, of the principal amount of your notes. Payments on the notes, including the amount you receive at maturity, will be calculated based on the \$10 principal amount per unit and will depend on the performance of the Index, subject to our and BAC's credit risk. See Terms of the Notes below.

The economic terms of the notes (including the Participation Rate) are based on BAC's internal funding rate, which is the rate it would pay to borrow funds through the issuance of market-linked notes and the economic terms of certain related hedging arrangements. BAC's internal funding rate is typically lower than the rate it would pay when it issues conventional fixed or floating rate debt securities. This difference in funding rate, as well as the underwriting discount and the hedging related charge described below, reduced the economic terms of the notes to you and the initial estimated value of the notes on the pricing date. Due to these factors, the public offering price you pay to purchase the notes is greater than the initial estimated value of the notes.

On the cover page of this term sheet, we have provided the initial estimated value for the notes. This initial estimated value was determined based on our, BAC's and our other affiliates' pricing models, which take into consideration BAC's internal funding rate and the market prices for the hedging arrangements related to the notes. For more information about the initial estimated value and the structuring of the notes, see Structuring the Notes on page TS-10.

Investor Considerations

**You may wish to consider an investment in the notes if:**

**The notes may not be an appropriate investment for you if:**

You anticipate that the Index will increase from the Starting Value to the Ending Value.

You believe that the Index will decrease from the Starting Value to the Ending Value or that it will not increase sufficiently over the term of the notes to provide you with your desired return.

You are willing to risk a loss of principal and return if the Index decreases from the Starting Value to an Ending Value that is below the Threshold Value.

You seek 100% principal repayment or preservation of capital.

You are willing to forgo the interest payments that are paid on conventional interest bearing debt securities.

You seek interest payments or other current income on your investment.

You are willing to forgo dividends or other benefits of owning the stocks included in the Index.

You want to receive dividends or other distributions paid on the stocks included in the Index.

You are willing to accept a limited or no market for sales prior to maturity, and understand that the market prices for the notes, if any, will be affected by various factors, including our and BAC's actual and perceived creditworthiness, BAC's internal funding rate and fees and charges on the notes.

You seek an investment for which there will be a liquid secondary market.

You are unwilling or are unable to take market risk on the notes to take our credit risk as issuer of the notes or to take BAC's credit risk, as guarantor of the notes.

You are willing to assume our credit risk, as issuer of the notes, and BAC's credit risk, as guarantor of the notes, for all payments under the notes, including the Redemption Amount.

We urge you to consult your investment, legal, tax, accounting, and other advisors before you invest in the notes.

Hypothetical Payout Profile and Examples of Payments at Maturity

**Leveraged Index Return Notes**

This graph reflects the returns on the notes, based on the Participation Rate of 164.1% and the Threshold Value of 80% of the Starting Value. The green line reflects the returns on the notes, while the dotted gray line reflects the returns of a direct investment in the stocks included in the Index, excluding dividends.

This graph has been prepared for purposes of illustration only.

The following table and examples are for purposes of illustration only. They are based on hypothetical values and show hypothetical returns on the notes. They illustrate the calculation of the Redemption Amount and total rate of return based on a hypothetical Starting Value of 100, a Threshold Value of 80, the Participation Rate of 164.1% and a range of hypothetical Ending Values. **The actual amount you receive and the resulting total rate of return will depend on the actual Starting Value, Threshold Value, Ending Value, and whether you hold the notes to maturity.** The following examples do not take into account any tax consequences from investing in the notes.

For recent actual levels of the Market Measure, see The Index section below. The Index is a price return index and as such the Ending Value will not include any income generated by dividends paid on the stocks included in the Index, which you would otherwise be entitled to receive if you invested in those stocks directly. In addition, all payments on the notes are subject to issuer and guarantor credit risk.

<b>Ending Value</b>	<b>Percentage Change from the Starting Value to the Ending Value</b>	<b>Redemption Amount per Unit<sup>(1)</sup></b>	<b>Total Rate of Return on the Notes</b>
0.00	-100.00%	\$2.00	-80.00%

160.00	60.00%	\$19.846	98.46%

(1) The Redemption Amount per unit is based on the Participation Rate.

(2) This is the hypothetical Threshold Value.

(3) The **hypothetical** Starting Value of 100 used in these examples has been chosen for illustrative purposes only.

(3) The actual Starting Value is 3,471.33 which was the closing level of the Market Measure on the pricing date.

**Redemption Amount Calculation Examples**

**Example 1**

The Ending Value is 70.00, or 70.00% of the Starting Value:

Starting Value: 100.00

Threshold Value: 80.00

Ending Value: 70.00

Redemption Amount per unit

**Example 2**

The Ending Value is 90.00, or 90.00% of the Starting Value:

Starting Value: 100.00

Threshold Value: 80.00

Ending Value: 90.00

Redemption Amount (per unit) = **\$10.00**, the principal amount, since the Ending Value is less than the Starting Value but equal to or greater than the Threshold Value.

**Example 3**

The Ending Value is 150.00, or 150.00% of the Starting Value:

Starting Value: 100.00

Ending Value: 150.00

= **\$18.205** Redemption Amount per unit
