x QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934
For the quarterly period ended June 30, 2018

or
TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934
For the transition period from ________ to _______ .
Commission File Number 000-18548

Xilinx, Inc.
(Exact name of registrant as specified in its charter)

Delaware	77-0188631
(State or other jurisdiction of incorporation or organization)	(I.R.S. Employer Identification No.)
2100 Logic Drive, San Jose, California	95124
(Address of principal executive offices)	(Zip Code)

(408) 559-7778
(Registrant’s telephone number, including area code)
N/A
(Former name, former address, and former fiscal year, if changed since last report)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes x No ¨
Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Website, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes x No ¨
Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer", "smaller reporting company" and "emerging growth company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer x	Accelerated filer o	Non-accelerated filer o
Smaller reporting company o	Emerging growth company o	

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. o

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes ¨ No x

Shares outstanding of the registrant's common stock:

Class	Shares Outstanding as of July 13, 2018
Common Stock, $0.01 par value	252,913,557

XILINX, INC.
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

Note 1. Basis of Presentation

The accompanying interim condensed consolidated financial statements have been prepared in conformity with United States (U.S.) generally accepted accounting principles (GAAP) for interim financial information and the instructions to Form 10-Q and Article 10 of Regulation S-X, and should be read in conjunction with the Xilinx, Inc. (Xilinx or the Company) consolidated financial statements filed with the U.S. Securities and Exchange Commission (SEC) on Form 10-K for the fiscal year ended March 31, 2018. The interim financial statements are unaudited, but reflect all adjustments which are, in the opinion of management, of a normal, recurring nature necessary to provide a fair statement of results for the interim periods presented. The results of operations for the interim periods shown in this report are not necessarily indicative of the results that may be expected for the fiscal year ending March 30, 2019 or any future period.

The Company uses a 52- to 53-week fiscal year ending on the Saturday nearest March 31. Fiscal 2019 and fiscal 2018 are both 52-week years ending on March 30, 2019 and March 31, 2018, respectively. The quarters ended June 30, 2018 and July 1, 2017 each consisted of 13 weeks.

Note 2. Recent Accounting Changes and Accounting Pronouncements

Recent Accounting Pronouncements Adopted

Revenue Recognition

In April 2014, the Financial Accounting Standards Board (FASB) issued the authoritative guidance, as amended, that outlines a new revenue recognition standard that replaces virtually all existing U.S. GAAP guidance on contracts with customers and the related other assets and deferred costs. The authoritative guidance provides a five-step process for recognizing revenue that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled, in exchange for those goods or services. The new guidance also requires expanded qualitative and quantitative disclosures relating to the nature, amount, timing and uncertainty of revenue and cash flows arising from contracts with customers. The new guidance is required to be applied retrospectively to each prior reporting period presented (Full Retrospective), or retrospectively with the cumulative effect of initially applying it recognized at the date of initial application. The Company adopted the new guidance on April 1, 2018, using the Full Retrospective method and restated the comparative prior periods. The Company implemented internal controls and certain system functionality to enable the preparation of financial information on adoption.
As a result of the adoption of the authoritative guidance, the Company changed its accounting policy for revenue recognition and the details of the significant changes and quantitative impact of the changes are disclosed below: Revenue from sales to the Company's distributors is recognized upon shipment of the product to the distributors (sell-in) and is reduced by estimated allowances for distributor price adjustments and rights of return. Previously, revenue was recognized upon reported resale of the product by the distributors to their customers (sell-through) as reduced by actual allowances for distributor price adjustments. Revenue from software license agreements, software license renewals, and other contracts are recognized at point of sales, whereas previously these were deferred and recognized over the contractual term before the implementation of the authoritative guidance. Revenue recognition related to the Company's other revenue streams, such as direct customers, remains unchanged.

The adoption of this authoritative guidance has an impact on the Company’s condensed consolidated statements of income and balance sheets, but has no impact on net cash provided by or used in operating, financing, or investing activities on the condensed consolidated statements of cash flows.
The impact on the Company's previously reported condensed consolidated statement of income resulting from the adoption of the authoritative guidance is as follows:

Diluted	265,797		265,797

The impact on the Company's previously reported condensed consolidated balance sheet line items affected by the adoption of the authoritative guidance is as follows:

(In thousands)	March 31, 2018		
	As Reported	Adjustment	As Adjusted
Accounts receivable	$372,144	$10,102	$382,246
Other assets	342,644	(5,242)	337,402
Deferred income on shipments to distributors	25,166	(25,166)	—
Other accrued liabilities	59,772	(92)	59,680
Retained earnings	1,483,538	30,118	1,513,656

Financial Instruments

In January 2016, the FASB issued final authoritative guidance regarding how companies measure equity investments that do not result in consolidation and are not accounted for under the equity method and how they present changes in the fair value of financial liabilities measured under the fair value option that are attributable to their own credit. The authoritative guidance also changes certain disclosure requirements and other aspects of current U.S. GAAP on this matter. The authoritative guidance does not change the guidance for classifying and measuring investments in debt securities and loans. The authoritative guidance is effective for public business entities for annual periods beginning after December 15, 2017, and interim periods within those annual periods. The Company adopted this authoritative guidance on April 1, 2018 and recorded the balance of the unrealized losses of $11.0 million as of the end of fiscal 2018 from its investment in debt mutual funds and equity securities to retained earnings, less the related deferred taxes of $2.6 million. Subsequent changes in fair value from such investments are recorded in the condensed consolidated statements of income.

8

Table of Contents

Income Taxes

In October 2016, the FASB issued authoritative guidance on income taxes which eliminates the deferred tax effects of intra-entity asset transfers other than inventory. As a result, a reporting entity would recognize the tax expense from the sale of an asset in the seller's tax jurisdiction when the transfer occurs, even though the pre-tax effects of that transaction are eliminated in consolidation. The authoritative guidance is effective for public business entities in fiscal years beginning after December 15, 2017 and requires the adoption be applied on a modified retrospective basis through a cumulative-effect adjustment to retained earnings. The Company adopted this authoritative guidance on April 1, 2018. Accordingly, $13.8 million of prepaid taxes associated with prior period intra-entity asset transfers was reclassified to retained earnings.

Recent Accounting Pronouncements Not Yet Adopted

Leases

In February 2016, the FASB issued authoritative guidance on leases. The new authoritative guidance requires the recognition of assets and liabilities arising from lease transactions on the balance sheet and will also require significant additional disclosures about the amount, timing and uncertainty of cash flows from leases. Accordingly, a lessee will recognize a lease asset for its right to use the underlying asset and a lease liability for the corresponding lease obligation. The new authoritative guidance is effective for public business entities for fiscal years beginning after December 15, 2018, and interim periods within those fiscal years, which for Xilinx would be the first quarter of fiscal 2020. Early adoption is permitted. The new authoritative guidance must be adopted using a modified retrospective transition with application of the new authoritative guidance for leases that existed at or are entered into after the beginning of the earliest comparative period presented. To help with the transition to the new guidance, certain practical expedients are provided. The Company is currently evaluating the impact of this new authoritative guidance on its condensed consolidated financial statements.

Note 3. Significant Customers and Concentrations of Credit Risk

Avnet, Inc. (Avnet), one of the Company's distributors, distributes the Company's products worldwide. As of June 30, 2018 and March 31, 2018, Avnet accounted for 70% and 61% of the Company's total net accounts receivable, respectively. Net revenues from Avnet accounted for 51% and 41% of the Company's worldwide net revenues in the first quarter of fiscal 2019 and 2018, respectively. The Company expects its accounts receivable to be relatively higher than normal on a temporary basis as the Company partners with its distributors to manage their inventory requirements.

Xilinx is subject to concentrations of credit risk primarily in its trade accounts receivable and investments in debt securities to the extent of the amounts recorded on the condensed consolidated balance sheet. The Company attempts to mitigate the concentration of credit risk in its trade receivables through its credit evaluation process, collection terms, distributor sales to diverse end customers and through geographical dispersion of sales. Xilinx generally does not require collateral for receivables from its end customers or distributors.

No end customer accounted for more than 10% of the Company's worldwide net revenues for the first quarter of fiscal 2019 and 2018.

The Company mitigates concentrations of credit risk in its investments in debt securities by currently investing approximately 91% of its portfolio in AA (or its equivalent) or higher grade securities as rated by Standard & Poor's or Moody's Investors Service. The Company's methods to arrive at investment decisions are not solely based on the rating

agencies' credit ratings. Xilinx also performs additional credit due diligence and conducts regular portfolio credit reviews, including a review of counterparty credit risk related to the Company's forward currency exchange and interest rate swap contracts. Additionally, Xilinx limits its investments in the debt securities of a single issuer based upon the issuer's credit rating and attempts to further mitigate credit risk by diversifying risk across geographies and type of issuer.

As of June 30, 2018, approximately 24% of the portfolio consisted of mortgage-backed securities. All of the mortgage-backed securities in the investment portfolio were issued by U.S. government-sponsored enterprises and agencies and are rated AA+ by Standard & Poor's and Aaa by Moody's Investors Service.

Table of Contents

Note 4. Fair Value Measurements

The authoritative guidance for fair value measurements established by the FASB defines fair value as the exchange price that would be received from selling an asset or paid to transfer a liability (an exit price) in an orderly transaction between market participants at the measurement date. When determining the fair value measurements for assets and liabilities required or permitted to be recorded at fair value, the Company considers the principal or most advantageous market in which Xilinx would transact and also considers assumptions that market participants would use when pricing the asset or liability, such as inherent risk, transfer restrictions and risk of nonperformance.

The Company determines the fair value for marketable debt securities using industry standard pricing services, data providers and other third-party sources and by internally performing valuation testing and analysis. The Company primarily uses a consensus price or weighted-average price for its fair value assessment. The Company determines the consensus price using market prices from a variety of industry standard pricing services, data providers, security master files from large financial institutions and other third party sources and uses those multiple prices as inputs into a distribution-curve-based algorithm to determine the daily market value. The pricing services use multiple inputs to determine market prices, including reportable trades, benchmark yield curves, credit spreads and broker/dealer quotes as well as other industry and economic events. For certain securities with short maturities, such as discount commercial paper and certificates of deposit, the security is accreted from purchase price to face value at maturity. If a subsequent transaction on the same security is observed in the marketplace, the price on the subsequent transaction is used as the current daily market price and the security will be accreted to face value based on the revised price.

The Company validates the consensus prices by taking random samples from each asset type and corroborating those prices using reported trade activity, benchmark yield curves, binding broker/dealer quotes or other relevant price information. There have not been any changes to the Company's fair value methodology during the first quarter of fiscal 2019 and the Company did not adjust or override any fair value measurements as of June 30, 2018.

Fair Value Hierarchy

The fair value framework requires the categorization of assets and liabilities into three levels based upon the assumptions (inputs) used to price the assets or liabilities. The guidance for fair value measurements requires that assets and liabilities carried at fair value be classified and disclosed in one of the following categories:

Level 1 — Quoted (unadjusted) prices in active markets for identical assets or liabilities.

The Company's Level 1 assets consist of U.S. government securities, money market funds and marketable equity securities.

Level 2 — Observable inputs other than quoted prices included in Level 1, such as quoted prices for similar assets or liabilities in active markets; quoted prices for identical or similar assets or liabilities in markets that are not active; or other inputs that are observable or can be corroborated by observable market data for substantially the full term of the asset or liability.

The Company's Level 2 assets consist of financial institution securities, non-financial institution securities, U.S. agency securities, foreign government and agency securities, mortgage-backed securities, debt mutual funds, asset-backed securities and commercial mortgage-backed securities. The Company's Level 2 assets and liabilities also include foreign currency forward contracts and interest rate swap contracts.

Level 3 — Unobservable inputs to the valuation methodology that are supported by little or no market activity and that are significant to the measurement of the fair value of the assets or liabilities. Level 3 assets and liabilities include those whose fair value measurements are determined using pricing models, discounted cash flow methodologies or similar valuation techniques, as well as significant management judgment or estimation.

The Company has no Level 3 assets and liabilities measured at fair value on a recurring basis.

Assets and Liabilities Measured at Fair Value on a Recurring Basis

In instances where the inputs used to measure fair value fall into different levels of the fair value hierarchy, the fair value measurement has been determined based on the lowest level input that is significant to the fair value measurement in its entirety. The Company’s assessment of the significance of a particular item to the fair value measurement in its entirety requires judgment, including the consideration of inputs specific to the asset or liability. The following tables present information about the Company’s assets and liabilities measured at fair value on a recurring basis as of June 30, 2018 and March 31, 2018:

Table of Contents

For certain of the Company’s financial instruments, including cash held in banks, accounts receivable and accounts payable, the carrying amounts approximate fair value due to their short maturities, and are therefore excluded from the fair value tables above.

As of June 30, 2018 and July 1, 2017, the Company held no marketable securities measured at fair value using Level 3 inputs.

Financial Instruments Not Recorded at Fair Value on a Recurring Basis

The Company's $500.0 million principal amount of 2.125% notes due March 15, 2019 (2019 Notes), $500.0 million principal amount of 3.000% notes due March 15, 2021 (2021 Notes) and $750.0 million principal amount of 2.950% senior notes due June 1, 2024 (2024 Notes) are measured at fair value on a quarterly basis for disclosure purposes. The fair values of the 2019 Notes, 2021 Notes and 2024 Notes as of June 30, 2018 were approximately $498.0 million, $495.9 million and $713.4 million, respectively, based on the last trading price for the period (classified as Level 2 in fair value hierarchy due to relatively low trading volume).

Assets and Liabilities Measured at Fair Value on a Non-Recurring Basis

As of June 30, 2018, the Company had non-marketable equity securities in private companies of $49.6 million, which were classified as Level 3 assets. The Company's investments in non-marketable securities of private companies, together with its non-financial assets such as property, plant and equipment, goodwill and acquisition-related intangibles, are recorded at fair value only if the Company recognizes an impairment or an observable price adjustment. Such impairment losses or observable price adjustments were not material during all periods presented.

Table of Contents

Note 5. Financial Instruments

The following is a summary of cash equivalents and available-for-sale securities as of the end of the periods presented:

(In thousands)	June 30, 2018 Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Estimated Fair Value	March 31, 2018 Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Estimated Fair Value

	$3,437,145	$ 602	$(47,827)	$3,389,920	$3,515,826	$ 1,404	$(40,444)	$3,476,786

Financial institution securities include securities issued or managed by financial institutions in various forms, such as commercial paper and time deposits. Substantially all time deposits were issued by institutions outside the U.S. as of June 30, 2018 and March 31, 2018.

The following tables show the fair values and gross unrealized losses of the Company's investments, aggregated by investment category, for individual securities that have been in a continuous unrealized loss position for the length of time specified, as of June 30, 2018 and March 31, 2018:

	June 30, 2018					
	Less Than 12 Months		12 Months or Greater		Total	
(In thousands)	Fair Value	Gross Unrealized Losses	Fair Value	Gross Unrealized Losses	Fair Value	Gross Unrealized Losses
Non-financial institution securities	$57,501	$(1,193)	$7,910	$(220)	$65,411	$(1,413)

Table of Contents

	March 31, 2018					
	Less Than 12 Months		12 Months or Greater		Total	
(In thousands)	Fair Value	Gross Unrealized Losses	Fair Value	Gross Unrealized Losses	Fair Value	Gross Unrealized Losses
Non-financial institution securities	$69,780	$(1,146)	$8,344	$(230)	$78,124	$(1,376)
U.S. government and agency securities	13,471	(176)	9,176	(96)	22,647	(272)
Mortgage-backed securities	510,988	(11,048)	299,663	(11,263)	810,651	(22,311)
Asset-backed securities	57,128	(876)	32,696	(502)	89,824	(1,378)
Debt mutual funds	—	—	89,670	(11,680)	89,670	(11,680)
Commercial mortgage-backed securities	95,435	(1,760)	56,051	(1,667)	151,486	(3,427)
	$746,802	$(15,006)	$495,600	$(25,438)	$1,242,402	$(40,444)

As of June 30, 2018, the gross unrealized losses that had been outstanding for less than twelve months were primarily related to mortgage-backed securities due to the general rising of the interest-rate environment, although the percentage of such losses to the total estimated fair value of the mortgage-backed securities was relatively insignificant. The gross unrealized losses that had been outstanding for more than twelve months were primarily related to debt mutual funds and mortgage-backed securities, which were primarily due to the general rising of the interest-rate environment and foreign currency movement.

Starting April 1, 2018, the Company records the change in the fair value of its investment in debt mutual funds and marketable equity securities as part of its interest and other income (expense), net. This change in fair value was a net decrease of $6.2 million for the three months ended June 30, 2018 and resulted in an expense within interest and other income (expense) net for the period.

The Company reviewed the investment portfolio and determined that the gross unrealized losses on these investments as of June 30, 2018 and March 31, 2018 were temporary in nature as evidenced by the fluctuations in the gross unrealized losses within the investment categories. These investments are highly rated by the credit rating agencies, there have been no defaults on any of these securities and the company has received interest payments as they become due. Therefore, the Company believes that it will be able to collect both principal and interest amount due to the Company. Additionally, in the past several years a portion of the Company's investment in the mortgage-backed securities was redeemed or prepaid by the debtors at par. Furthermore, the aggregate of individual unrealized losses that had been outstanding for twelve months or more was not significant as of June 30, 2018 and March 31, 2018. The Company neither intends to sell these investments nor concludes that it is more-likely-than-not that it will have to sell them until recovery of their carrying values.

The amortized cost and estimated fair value of marketable debt securities (financial institution securities, non-financial institution securities, U.S. and foreign government and agency securities, asset-backed securities, mortgage-backed securities and commercial mortgage-backed securities), by contractual maturity, are shown in the table below. Actual maturities may differ from contractual maturities because issuers may have the right to call or prepay obligations without call or prepayment penalties.

	June 30, 2018	
(In thousands)	Amortized Cost	Estimated Fair Value
Due in one year or less	$1,758,865	$1,758,593

Due after one year through five years	176,391	172,941
Due after five years through ten years	148,349	143,894
Due after ten years	785,984	764,086
	$2,869,589	$2,839,514

As of June 30, 2018, $1.08 billion of marketable debt securities with contractual maturities of greater than one year were classified as short-term investments. Additionally, the above table does not include investments in money market, debt mutual funds and marketable equity securities because these investments do not have specific contractual maturities.

Table of Contents

Certain information related to available-for-sale securities is as follows:

(In thousands)	Three Months Ended June 30, 2018	July 1, 2017
Proceeds from sale of available-for-sale securities	$895	$119,922
Gross realized gains on sale of available-for-sale securities	$96	$832
Gross realized losses on sale of available-for-sale securities	(47)	(386)
Net realized gains on sale of available-for-sale securities	$49	$446
Amortization of premiums on available-for-sale securities	$2,491	$6,823

The cost of securities matured or sold is based on the specific identification method.

Note 6. Derivative Financial Instruments

The Company’s primary objective for holding derivative financial instruments is to manage foreign currency exchange rate risk and interest rate risk. As a result of the use of derivative financial instruments, the Company is exposed to the risk that counterparties to derivative contracts may fail to meet their contractual obligations. The Company manages counterparty credit risk in derivative contracts by reviewing counterparty creditworthiness on a regular basis, establishing collateral requirement and limiting exposure to any single counterparty. The right of set-off that exists with certain transactions enables the Company to net amounts due to and from the counterparty, reducing the maximum loss from credit risk in the event of counterparty default.

As of June 30, 2018 and March 31, 2018, the Company had the following outstanding forward currency exchange contracts (in notional amount), which were derivative financial instruments:

(In thousands and U.S. dollars)	June 30, 2018	March 31, 2018
Singapore Dollar	$26,392	$24,914
Euro	38,591	38,987
Indian Rupee	64,959	62,472
British Pound	8,125	8,155
Japanese Yen	3,882	3,859
Chinese Yuan	13,247	8,260
	$155,196	$146,647

As part of the Company’s strategy to reduce volatility of operating expenses due to foreign exchange rate fluctuations, the Company employs a hedging program with a forward outlook of up to two years for major foreign-currency-denominated operating expenses. The outstanding forward currency exchange contracts expire at various dates through May 2020. The net unrealized losses, which approximate the fair market value of the outstanding forward currency exchange contracts, are expected to be realized into net income within the next two years.

As of June 30, 2018, all of the forward foreign currency exchange contracts were designated and qualified as cash flow hedges and the effective portion of the gain or loss on the forward contracts was reported as a component of other comprehensive income (loss) and reclassified into net income in the same period during which the hedged transaction affects earnings. The estimated amount of such gains or losses as of June 30, 2018 that is expected to be

reclassified into earnings was not material. The ineffective portion of the gains or losses on the forward contracts was immaterial and included in the net income for all periods presented.

The Company may enter into forward foreign currency exchange contracts to hedge firm commitments such as acquisitions and capital expenditures. Gains and losses on foreign currency forward contracts that are designated as hedges of anticipated transactions, for which a firm commitment has been attained and the hedged relationship has been effective, are deferred and included in income or expenses in the same period that the underlying transaction is settled. Gains and losses on any instruments not meeting the above criteria are recognized in income or expenses in the consolidated statements of income as they are incurred.

Table of Contents

The Company entered into interest rate swap contracts with certain independent financial institutions to manage interest rate risks related to fixed interest rate expenses from its 2024 Notes and floating interest rate income from its investments in marketable debt securities. See “Note 10. Debt and Credit Facility” for more discussion related to interest rate swap contracts. The interest rate swap contracts were designated and qualified as fair value hedges of the 2024 Notes, and were separately accounted for as a derivative. The interest rate swap contracts and the 2024 Notes were initially measured at fair value. Any subsequent changes in fair values of the interest rate swap contracts and the 2024 Notes will be recorded in the Company’s consolidated balance sheets. During the three months ended June 30, 2018, the net change in fair values of the interest rate swap contracts and the underlying 2024 Notes was $7.4 million, which was recorded as a derivative liability for the interest rate swap contacts and also a reduction from the carrying amount of 2024 Notes. There was no ineffectiveness during all periods presented.

The Company had the following derivative instruments as of June 30, 2018 and March 31, 2018, located on the condensed consolidated balance sheets, utilized for risk management purposes detailed above:

	Foreign Exchange Contracts			
	Asset Derivatives		Liability Derivatives	
(In thousands)	Balance Sheet Location	Fair Value	Balance Sheet Location	Fair Value
June 30, 2018	Prepaid expenses and other current assets	$167	Other accrued liabilities	$5,040
March 31, 2018	Prepaid expenses and other current assets	$2,922	Other accrued liabilities	$12

The Company does not offset or net the fair value amounts of derivative financial instruments in its condensed consolidated balance sheets. The potential effect of rights of set-off associated with the derivative financial instruments was not material to the Company's condensed consolidated balance sheets for all periods presented.

The following table summarizes the effect of derivative instruments on the condensed consolidated statements of income for the first quarter of fiscal 2019 and 2018:

	Three Months Ended	
(In thousands)	June 30, 2018	July 1, 2017
Amount of gains (losses) recognized in other comprehensive income on derivative (effective portion of cash flow hedging)	$(5,909)	$1,086
Amount of gains (losses) reclassified from accumulated other comprehensive income into income (effective portion) *	$(430)	$357
Amount of gains (losses) recorded (ineffective portion) *	$(11)	$(19)

*Recorded in interest and other income (expense), net within the condensed consolidated statements of income.

Note 7. Stock-Based Compensation Plans

The Company’s equity incentive plans are broad-based, long-term retention programs that cover employees, consultants and non-employee directors of the Company. These plans are intended to attract and retain talented employees, consultants and non-employee directors and to provide such persons with a proprietary interest in the Company.

Stock-Based Compensation

The following table summarizes stock-based compensation expense related to stock awards granted under the Company’s equity incentive plans and rights to acquire stock granted under the Company’s Employee Stock Purchase Plan (ESPP):

Table of Contents

(In thousands)	Three Months Ended	
	June 30, 2018	July 1, 2017
Stock-based compensation included in:		
Cost of revenues	$2,035	$2,150
Research and development	20,930	17,466
Selling, general and administrative	12,643	12,420
	$35,608	$32,036

Employee Stock Option Plans

The types of awards allowed under the 2007 Equity Incentive Plan (2007 Equity Plan) include incentive stock options, non-qualified stock options, restricted stock units (RSUs), restricted stock and stock appreciation rights. To date, the Company has issued a mix of non-qualified stock options and RSUs under the 2007 Equity Plan; however, there was no issuance of stock options during the first quarter of fiscal 2019 and the entire fiscal 2018. The Company's stock-based compensation expenses related to options during the first quarter of fiscal 2019 and the number of options outstanding as of June 30, 2018 were not material. As of June 30, 2018, 11.2 million shares remained available for grant under the 2007 Equity Plan.

The total pre-tax intrinsic value of options exercised during the three months ended June 30, 2018 and July 1, 2017 was $220 thousand and $2.8 million, respectively. This intrinsic value represents the difference between the exercise price and the fair market value of the Company’s common stock on the date of exercise.

RSU Awards

A summary of the Company’s RSU activity and related information is as follows:

(Shares in thousands)	RSUs Outstanding	
	Number of Shares	Weighted-Average Grant-Date Fair Value Per Share
April 1, 2017	6,988	$ 42.93
Granted	3,718	$ 60.18
Vested	(3,016)	$ 43.30
Cancelled	(701)	$ 48.16
March 31, 2018	6,989	$ 51.39
Granted	261	$ 65.69
Vested	(212)	$ 53.68
Cancelled	(128)	$ 50.50
June 30, 2018	6,910	$ 51.84

Table of Contents

The estimated fair values of RSUs were calculated based on the market price of Xilinx common stock on the date of grant, reduced by the present value of dividends expected to be paid on Xilinx common stock prior to vesting. The per share weighted-average fair value of RSUs granted during the first quarter of fiscal 2019 was $65.69 ($57.99 for the first quarter of fiscal 2018), which were calculated based on estimates at the date of grant using the following weighted-average assumptions:

	Three Months Ended	
	June 30, 2018	July 1, 2017
Risk-free interest rate	2.7%	1.7 %
Dividend yield	2.1%	2.3 %

For the majority of RSUs granted, the number of shares of common stock issued on the date the RSU awards vest is net of the minimum statutory withholding requirements that the Company pays in cash to the appropriate taxing authorities on behalf of the Company's employees. During the first three months of fiscal 2019 and 2018, the Company withheld $5.5 million and $25.6 million worth of RSU awards, respectively, to satisfy the employees' tax obligations.

During the first three months of fiscal 2019, the Company realized an immaterial amount of excess tax benefits in the condensed consolidated statements of income as a component of the provision for income taxes. During the first three months of fiscal 2018, the Company realized tax benefits of $11.6 million.

Employee Stock Purchase Plan

The fair values of stock purchase plan rights under the Company's ESPP were estimated using the Black-Scholes option pricing model. Under the Company's ESPP, shares are only issued during the second and fourth quarters of each fiscal year. Therefore, no shares were issued during the first quarter of fiscal 2019 or 2018. The next scheduled purchase under the ESPP is in the second quarter of fiscal 2019. As of June 30, 2018, 9.3 million shares were available for future issuance under the Company's ESPP.

Note 8. Net Income Per Common Share

The computation of basic net income per common share for all periods presented is derived from information on the condensed consolidated statements of income, and there are no reconciling items in the numerator used to compute the diluted net income per common share. The following table summarizes the computation of basic and diluted net income per common share:

(In thousands, except per share amounts)	June 30, 2018	July 1, 2017
Net income available to common stockholders	$190,038	$157,244
Weighted average common shares outstanding-basic	252,682	247,911
Dilutive effect of employee equity incentive plans	3,253	3,817
Dilutive effect of 2017 Convertible Notes and warrants	—	14,069
Weighted average common shares outstanding-diluted	255,935	265,797
Basic net income per common share	$0.75	$0.63
Diluted net income per common share	$0.74	$0.59

The total shares used in the denominator of the diluted net income per common share calculation include potentially dilutive common equivalent shares outstanding that are not included in basic net income per common share calculation. The diluted shares were calculated by applying the treasury stock method to the impact of the equity incentive plans, the incremental shares issuable assuming conversion of the Company's $600.0 million principal amount of 2.625% convertible notes issued in June 2010 (2017 Convertible Notes), before its maturity on June 15, 2017, and exercise of warrants on a weighted-average outstanding basis, before the final settlements during the third quarter of fiscal 2018. The 2017 Convertible Notes matured during the first quarter of fiscal 2018, and the Company exercised its call options to neutralize the dilutive effect of the incremental shares from the 2017 Convertible Notes. Because the number of diluted shares in the above table for the three months ended July 1, 2017 was calculated based on a weighted-average outstanding basis, it included approximately 6.0 million shares of dilutive impact from the 2017 Convertible Notes through the maturity date. Such impact will no longer be applicable in future periods.

Table of Contents

Outstanding stock options and RSUs under the Company's stock award plans to purchase approximately 366 thousand and 152 thousand shares for the first quarter of fiscal 2019 and 2018, respectively, were excluded from the diluted net income per common share calculation by applying the treasury stock method, as their inclusion would have been antidilutive. These options and RSUs could be dilutive in the future if the Company’s average share price increases and is greater than the combined exercise prices and the unamortized fair values of these options and RSUs.

Note 9. Inventories

Inventories are stated at the lower of actual cost (determined using the first-in, first-out method), or market (estimated net realizable value) and are comprised of the following:

(In thousands)	June 30, 2018	March 31, 2018
Raw materials	$17,405	$14,674
Work-in-process	169,926	167,039
Finished goods	59,670	54,364
	$247,001	$236,077

Note 10. Debt and Credit Facility

2019 Notes and 2021 Notes

On March 12, 2014, the Company issued the 2019 Notes and 2021 Notes at a discounted price of 99.477% and 99.281% of par, respectively. Interest on the 2019 Notes and 2021 Notes is payable semi-annually on March 15 and September 15.

The Company received net proceeds of $990.1 million from issuance of the 2019 Notes and 2021 Notes, after the debt discount and deduction of debt issuance costs. The debt discounts and issuance costs are amortized to interest expense over the terms of the 2019 Notes and 2021 Notes. As of June 30, 2018, the remaining term of the 2019 Notes and 2021 Notes are 0.7 years and 2.7 years respectively.

The following table summarizes the carrying value of the 2019 Notes and 2021 Notes as of June 30, 2018 and March 31, 2018:

(In thousands)	June 30, 2018	March 31, 2018
Principal amount of the 2019 Notes	$500,000	$500,000
Unamortized discount of the 2019 Notes	(365)	(501)
Unamortized debt issuance costs associated with 2019 Notes	(228)	(313)
Carrying value of the 2019 Notes	499,407	499,186
Principal amount of the 2021 Notes	500,000	500,000
Unamortized discount of the 2021 Notes	(1,461)	(1,593)
Unamortized debt issuance costs associated with 2021 Notes	(651)	(711)
Carrying value of the 2021 Notes	$497,888	$497,696
Total carrying value	$997,295	$996,882

Interest expense related to the 2019 Notes and 2021 Notes was included in interest and other income (expense), net on the condensed consolidated statements of income as follows:

(In thousands)	Three Months Ended	
	June 30, 2018	July 1, 2017
Contractual coupon interest	$6,406	$6,406
Amortization of debt issuance costs	146	146
Amortization of debt discount, net	268	260
Total interest expense related to the 2019 Notes and 2021 Notes	$6,820	$6,812

Table of Contents

2024 Notes

On May 30, 2017, the Company issued the 2024 Notes at a discounted price of 99.887% of par. Interest on the 2024 Notes is payable semi-annually on June 1 and December 1.

The Company received $745.2 million from the issuance of the 2024 Notes, after the debt discount and deduction of debt issuance costs. The debt discounts and issuance costs are amortized to interest expense over the term of the 2024 Notes. As of June 30, 2018, the remaining term of the 2024 Notes is approximately 6.0 years.

In relation to the issuance of the 2024 Notes, the Company entered into interest rate swap contracts with certain independent financial institutions, whereby the Company pays on a semi-annual basis, a variable interest rate equal to the three-month London Interbank Offered Rate (LIBOR) plus 91.43 bps, and receives on a semi-annual basis, interest income at a fixed interest rate of 2.950%. The Company incurred a net interest expense of $851 thousand for the three months ended June 30, 2018 and earned a net interest income of $643 thousand for the three months ended July 1, 2017, from the interest rate swap contracts, which was included in interest and other income (expense), net on the condensed consolidated statements of income. As of June 30, 2018, the fair value of the interest rate swap contracts was $36.4 million, which was recorded in other long-term liabilities.

The following table summarizes the carrying value of the 2024 Notes as of June 30, 2018 and March 31, 2018:

(In thousands)	June 30, 2018	March 31, 2018
Principal amount of the 2024 Notes	$750,000	$750,000
Unamortized discount of the 2024 Notes	(727)	(755)
Unamortized debt issuance costs associated with 2024 Notes	(3,358)	(3,500)
Carrying Value of the 2024 Notes	$745,915	$745,745
Fair value hedge adjustment — interest rate swap contracts	(36,416)	(29,001)
Net carrying value of the 2024 Notes	$709,499	$716,744

Interest expense related to the 2024 Notes was included in interest and other income (expense), net on the condensed consolidated statements of income as follows:

	Three Months Ended	
(In thousands)	June 30, 2018	July 1, 2017
Contractual coupon interest (including interest rate swap, net)	$6,382	$1,322
Amortization of debt issuance costs	142	47
Amortization of debt discount, net	28	10
Total interest expense related to the 2024 Notes	$6,552	$1,379

Revolving Credit Facility

On December 7, 2016, the Company entered into a $400.0 million senior unsecured revolving credit facility that, upon certain conditions, may be extended by an additional $150.0 million, with a syndicate of banks (expiring in December 2021). Borrowings under the credit facility will bear interest at a benchmark rate plus an applicable margin based upon the Company’s credit rating. In connection with the credit facility, the Company is required to maintain certain financial and nonfinancial covenants. As of June 30, 2018, the Company had made no borrowings under this credit

facility and was not in violation of any of the covenants.

Note 11. Common Stock Repurchase Program

The Board of Directors (Board) has approved stock repurchase programs enabling the Company to repurchase its common stock in the open market or through negotiated transactions with independent financial institutions. On May 16, 2016, the Board authorized the repurchase of up to $1.00 billion of the Company's common stock and debentures (2016 Repurchase Program). The 2016 Repurchase Program has no stated expiration date. On May 16, 2018, the Board authorized the 2018 Repurchase Program to repurchase the Company's common stock and debentures up to $500.0 million.

Table of Contents

Through June 30, 2018, the Company had used $929.4 million of the $1.00 billion authorized under the 2016 Repurchase Program, leaving $70.6 million available for future repurchases. The Company’s current policy is to retire all repurchased shares, and consequently, no treasury shares were held as of June 30, 2018 and March 31, 2018.

During the first quarter of fiscal 2019, the Company repurchased 2.1 million shares of common stock for a total of $136.8 million and during the first quarter of fiscal 2018, the Company repurchased 1.0 million shares of common stock for a total of $67.1 million.

Note 12. Interest and Other Income (Expense), Net

The components of interest and other income (expense), net are as follows:

(In thousands)	Three Months Ended	
	June 30, 2018	July 1, 2017
Interest income	$17,397	$13,414
Interest expense	(13,372)	(12,081)
Other income (expense), net	(6,872)	506
Total interest and other income (expense), net	$(2,847)	$1,839

Note 13. Accumulated Other Comprehensive Loss

Comprehensive income (loss) is defined as the change in equity of a company during a period from transactions and other events and circumstances from non-owner sources. The components of the Company's accumulated other comprehensive loss are as follows:

(In thousands)	June 30, 2018	March 31, 2018
Accumulated unrealized losses on available-for-sale securities, net of tax	$(23,156)	$(29,844)
Accumulated unrealized gains (losses) on hedging transactions, net of tax	(4,386)	1,674
Accumulated cumulative translation adjustment, net of tax	(8,390)	(6,339)
Total accumulated other comprehensive loss	$(35,932)	$(34,509)

The related tax effects of other comprehensive income (loss) were not material for all periods presented.

Note 14. Income Taxes

The Company recorded a tax provision of $22.9 million for the first quarter of fiscal 2019 as compared to $13.7 million in the same prior year period, representing effective tax rates of 11% and 8%, respectively. The prior year balance has been restated to reflect the retrospective application of the current authoritative guidance for revenue recognition. Please refer to "Note 2. Recent Accounting Changes and Accounting Pronouncements" for additional detail.

On December 22, 2017, the Tax Cuts and Jobs Act (TCJA) was enacted into law. The TCJA provides numerous significant tax law changes including the reduction of the U.S. federal corporate income tax rate from 35% to 21%, the requirement for companies to pay a one-time transition tax on earnings of certain foreign subsidiaries that were previously tax deferred and the creation of new taxes on certain foreign-sourced earnings. Some provisions of the TCJA began to impact the Company in fiscal 2018, while other provisions impact the Company beginning in fiscal

2019.

In accordance with Staff Accounting Bulletin (SAB) 118, the Company has recorded provisional amounts recognizing the effect of the tax law changes in prior periods, but may adjust those provisional amounts during a measurement period that is similar to the measurement period used when accounting for business combinations. As of June 30, 2018, the Company has not adjusted the provisional estimate recorded in prior periods for effects from the one-time transition tax. The amount recorded for the one-time transition tax remains provisional as the Company has not yet finalized its calculation of the total post-1986 earnings and profits (E&P) for its foreign subsidiaries. Additionally, the Company will continue to evaluate the impact of the tax law change as it relates to providing U.S. taxes on its investments in foreign subsidiaries. Since U.S. federal taxes have been recognized through the one-time transition tax on all accumulated and previously untaxed foreign earnings through December 31, 2017, the Company does not intend to permanently reinvest those earnings.

Table of Contents

The difference between the U.S. federal statutory tax rate of 21% and the Company's effective tax rate in the first quarter of fiscal 2019 was primarily due to the beneficial impact of income earned in lower tax rate jurisdictions, which was partially offset by the new tax on low-taxed income from foreign subsidiaries. The difference between the U.S. federal statutory tax rate of 35% and the Company's effective tax rate in the first quarter of fiscal 2018 was primarily due to income earned in lower tax rate jurisdictions, for which no U.S. income tax had been provided, as the Company had intended to permanently reinvest the earnings outside of the U.S.

The Company's total gross unrecognized tax benefits as of June 30, 2018, determined in accordance with FASB authoritative guidance for measuring uncertain tax positions, increased by $825 thousand in the first quarter of fiscal 2019 to $126.0 million. The total amount of unrecognized tax benefits that, if realized in a future period, would favorably affect the effective tax rate was $16.0 million as of June 30, 2018. Another $85.5 million would increase additional paid-in capital. The $85.5 million relates to an additional deduction claimed on federal and state amended tax returns for fiscal 2014 for repurchase premium paid in that year in connection with the early redemption of the Company's 3.125% Junior Convertible debenture due March 15, 2037. It is reasonably possible that changes to the Company's unrecognized tax benefits could be significant in the next twelve months due to tax audit settlements and lapses of statutes of limitation. As a result of uncertainties regarding tax audit settlements and their possible outcomes, an estimate of the range of increase or decrease that could occur in the next twelve months cannot be made.

The Company's policy is to include interest and penalties related to income tax liabilities within the provision for income taxes on the condensed consolidated statements of income. The balance of accrued interest and penalties recorded in the condensed consolidated balance sheets and the amounts of interest and penalties included in the Company's provision for income taxes were not material for all periods presented.

The statutes of limitations have closed for U.S. federal income tax purposes for years through fiscal 2014, for U.S. state income tax purposes for years through fiscal 2010, and for Ireland income tax purposes for years through fiscal 2013.

Note 15. Commitments

Xilinx leases some of its facilities and office buildings under non-cancelable operating leases that expire at various dates through April 2029. Additionally, Xilinx entered into a land lease in conjunction with the Company's building in Singapore, which will expire in November 2035 and the lease cost was settled in an up-front payment in June 2006. Some of the operating leases for facilities and office buildings require payment of operating costs, including property taxes, repairs, maintenance and insurance. Most of the Company's leases contain renewal options for varying terms. Xilinx also leases cars under non-cancelable operating leases that expire at various dates through May 2022. Approximate future minimum lease payments under non-cancelable operating leases are as follows:

Fiscal	(In thousands)
2019 (remaining nine months)	$ 6,115
2020	9,216
2021	7,198
2022	5,923
2023	4,798
Thereafter	30,708
Total	$ 63,958

Aggregate future rental income to be received, which includes rents from both owned and leased property, totaled $12.0 million as of June 30, 2018. Rent expense, net of rental income, under all operating leases was $1.0 million and

$1.2 million for the three months ended June 30, 2018 and July 1, 2017, respectively. Rental income was not material for the first quarter of fiscal 2019 or 2018.

Other commitments as of June 30, 2018 totaled $136.5 million and consisted of purchases of inventory and other non-cancelable purchase obligations related to subcontractors that manufacture silicon wafers and provide assembly and some test services. The Company expects to receive and pay for these materials and services in the next three to six months, as the products meet delivery and quality specifications. Additionally, as of June 30, 2018, the Company also had $18.9 million of non-cancelable license obligations to providers of electronic design automation software and hardware/software maintenance and $33.7 million commitments primarily related to open purchase orders from ordinary operations. These commitments expire at various dates through December 2022.

Table of Contents

Note 16. Product Warranty and Indemnification

The Company generally sells products with a limited warranty for product quality. The Company provides an accrual for known product issues if a loss is probable and can be reasonably estimated. As of the end of the first quarter of fiscal 2019 and the end of fiscal 2018, the accrual balances of the product warranty liability were immaterial.

The Company offers, subject to certain terms and conditions, to indemnify customers and distributors for costs and damages awarded against these parties in the event the Company's hardware products are found to infringe third-party intellectual property rights, including patents, copyrights or trademarks, and to compensate certain customers for limited specified costs they actually incur in the event the Company's hardware products experience epidemic failure. To a lesser extent, the Company may from time-to-time offer limited indemnification with respect to its software products. The terms and conditions of these indemnity obligations are limited by contract, which obligations are typically perpetual from the effective date of the agreement. The Company has historically received only a limited number of requests for indemnification under these provisions and has not made any significant payments pursuant to these provisions. The Company cannot estimate the maximum amount of potential future payments, if any, that the Company may be required to make as a result of these obligations due to the limited history of indemnification claims and the unique facts and circumstances that are likely to be involved in each particular claim and indemnification provision. However, there can be no assurances that the Company will not incur any financial liabilities in the future as a result of these obligations.

Note 17. Contingencies

Patent Litigation

On February 1, 2017, a patent infringement lawsuit was filed by Godo Kaisha IP Bridge 1 (IP Bridge) against the Company in the U.S. District Court for the Eastern District of Texas (Godo Kaisha IP Bridge 1 v. Xilinx, Inc., Case. No. 2:17-cv-00100). The lawsuit pertains to two patents and IP Bridge seeks unspecified damages, interest, attorneys' fees, costs, and a permanent injunction or an on-going royalty. On September 14, 2017, the court granted the Company's motion to transfer venue and the matter is now pending before the U.S. District Court for the Northern District of California. The Company is unable to estimate its range of possible loss, if any, in this matter at this time.

On March 17, 2017, a patent infringement lawsuit was filed by Anza Technology, Inc. (Anza) against the Company in the U.S. District Court for the District of Colorado (Anza Technology, Inc. v. Xilinx, Inc., Case No. 1:17-cv-00687). The lawsuit pertains to three patents and Anza seeks unspecified damages, attorney fees, interest, costs, and expenses. On October 27, 2017, the court granted the Company's motion to transfer venue and the matter is now pending before the U.S. District Court for the Northern District of California. The Company is unable to estimate its range of possible loss, if any, in this matter at this time.

The Company intends to continue to protect and defend its IP vigorously.

Other Matters

On June 11, 2015, John P. Neblett, as Chapter 7 Trustee of Valley Forge Composite Technologies, Inc., filed a complaint against Xilinx and others in the U.S. Bankruptcy Court for the Middle District of Pennsylvania (Bankruptcy No. 1:13-bk-05253-JJT). The complaint alleges causes of actions against Xilinx for negligence and civil conspiracy relating to alleged violations of U.S. export laws. It seeks at least $50.0 million in damages, together with punitive damages, from the defendants. On September 21, 2015, the action was withdrawn from the U.S. Bankruptcy Court for the Middle District of Pennsylvania and transferred to the U.S. District Court for the Eastern District of Kentucky. On

November 2, 2015, Xilinx, along with other defendants, filed a motion to dismiss the complaint. On November 3, 2015, Xilinx filed a motion for sanctions pursuant to Federal Rule of Civil Procedure 11. On June 27, 2016, the Court denied both motions. On September 11, 2017, Xilinx, along with other defendants, filed motions for summary judgment seeking to dispose of all claims against them. On July 3, 2018, the Court granted both of Xilinx's Motions for Summary Judgment, disposing of all claims asserted against Xilinx.

From time to time, the Company is involved in various disputes and litigation matters that arise in the ordinary course of its business. These include disputes and lawsuits related to intellectual property, mergers and acquisitions, licensing, contract law, tax, regulatory, distribution arrangements, employee relations and other matters. Periodically, the Company reviews the status of each matter and assesses its potential financial exposure. If the potential loss from any claim or legal proceeding is considered probable and a range of possible losses can be estimated, the Company accrues a liability for the estimated loss. Legal proceedings are subject to uncertainties, and the outcomes are difficult to predict. Because of such uncertainties, accruals are based only on the best information available at the time. As additional information becomes available, the Company continues to reassess the potential liability related to pending claims and litigation and may revise estimates.

Table of Contents

Note 18. Goodwill and Acquisition-Related Intangibles

As of June 30, 2018 and March 31, 2018, the gross and net amounts of goodwill and of acquisition-related intangibles for all acquisitions were as follows:

(In thousands)	June 30, 2018	March 31, 2018	Weighted-Average Amortization Life
Goodwill	$162,421	$162,421	
Core technology, gross	82,480	82,480	
Less accumulated amortization	(78,885)	(78,562)	
Core technology, net	3,595	3,918	4.8 years
Other intangibles, gross	46,966	46,966	
Less accumulated amortization	(46,798)	(46,761)	
Other intangibles, net	168	205	2.6 years
Total acquisition-related intangibles, gross	129,446	129,446	
Less accumulated amortization	(125,683)	(125,323)	
Total acquisition-related intangibles, net	$3,763	$4,123	

Amortization expense for acquisition-related intangibles for the three months ended June 30, 2018 and July 1, 2017 was $360 thousand and $705 thousand, respectively. Based on the carrying value of acquisition-related intangibles recorded as of June 30, 2018, and assuming no subsequent acquisition or impairment of the underlying assets, the annual amortization expense for acquisition-related intangibles is expected to be as follows:

Fiscal	(In thousands)
2019 (remaining nine months)	$ 893
2020	1,160
2021	1,137
2022	573
Total	$ 3,763

Note 19. Subsequent Events

On July 17, 2018, the Company announced the acquisition of DeePhi Technology Co., Ltd, a leading artificial intelligence and machine learning company.

On July 24, 2018, the U.S. Court of Appeals for the Ninth Circuit reversed a 2015 decision of the U.S. Tax Court that had found U.S. Treasury Regulations requiring the inclusion of stock-based compensation in intercompany cost-sharing arrangements to be invalid. The case at issue was Altera Corp. v. Commissioner. The Company is currently evaluating the impact of this decision on its financial statements and is unable to estimate the impact at this time.

On July 24, 2018, the Company’s Board of Directors declared a cash dividend of $0.36 per common share for the second quarter of fiscal 2019. The dividend is payable on August 28, 2018 to stockholders of record on August 8, 2018.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

The statements in this Management's Discussion and Analysis that are forward-looking, within the meaning of the Private Securities Litigation Reform Act of 1995, involve numerous risks and uncertainties and are based on current expectations. The reader should not place undue reliance on these forward-looking statements. Our actual results could differ materially from those anticipated in these forward-looking statements for many reasons, including those risks discussed under "Risk Factors" and elsewhere in this document. Often, forward-looking statements can be identified by the use of forward-looking words, such as "may," "will," "could," "should," "expect," "believe," "anticipate," "estimate," "continue," "plan," "intend," "project" and other similar terminology, or the negative of such terms. We disclaim any responsibility to update or revise any forward-looking statement provided in this Management's Discussion and Analysis for any reason.

Critical Accounting Policies and Estimates

The methods, estimates and judgments we use in applying our most critical accounting policies have a significant impact on the results we report in our condensed consolidated financial statements. The SEC has defined critical accounting policies as those that are most important to the portrayal of our financial condition and results of operations and require us to make our most difficult and subjective judgments, often as a result of the need to make estimates of matters that are inherently uncertain. Based on this definition, our critical accounting policies include: valuation of marketable securities, which impacts losses on debt and equity securities when we record impairments; revenue recognition, which impacts the recording of revenues; and valuation of inventories, which impacts cost of revenues and gross margin. Our critical accounting policies also include: the assessment of impairment of long-lived assets, which impacts their valuation; the assessment of the recoverability of goodwill, which impacts goodwill impairment; accounting for income taxes, which impacts the provision or benefit recognized for income taxes, as well as the valuation of deferred tax assets recorded on our condensed consolidated balance sheet; and valuation and recognition of stock-based compensation, which impacts gross margin, research and development (R&D) expenses, and selling, general and administrative (SG&A) expenses. For more discussion please refer to "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" included in our Form 10-K for the year ended March 31, 2018 filed with the SEC, and to "Note 2. Recent Accounting Changes and Accounting Pronouncements" to our condensed consolidated financial statements, included in Part I. "Financial Information." We also have other key accounting policies that are not as subjective, and therefore, their application would not require us to make estimates or judgments that are as difficult, but which nevertheless could significantly affect our financial reporting.

Results of Operations: first quarter of fiscal 2019 compared to the first quarter of fiscal 2018

The following table sets forth statement of income data as a percentage of net revenues for the periods indicated:

	Three Months Ended			
	June 30, 2018		July 1, 2017	
Net revenues	100.0	%	100.0	%
Cost of revenues	30.2		31.7	
Gross margin	69.8		68.3	
Operating expenses:				
Research and development	25.0		25.4	
Selling, general and administrative	13.2		14.8	

Amortization of acquisition-related intangibles	0.1		0.1	
Total operating expenses	38.3		40.3	
Operating income	31.5		28.0	
Interest and other income (expense), net	(0.4	)	0.3	
Income before income taxes	31.1		28.3	
Provision for income taxes	3.3		2.2	
Net income	27.8	%	26.1	%

25

Table of Contents

Net Revenues

We sell our products to global manufacturers of electronic products in various end markets. The vast majority of our net revenues is generated by sales of our semiconductor products, but we also generate sales from support products. We classify our product offerings into two categories: Advanced Products and Core Products:

- Advanced Products include our most recent product offerings and consist of the UltraScale+, UltraScale and 7-series product families.

- Core Products consist of all other product families.

These product categories are modified on a periodic basis to better reflect the maturity of the products and advances in technology. The most recent modification was made on April 3, 2016, which was the beginning of our fiscal 2017, whereby we reclassified our product categories to be consistent with how these categories are analyzed and reviewed internally. Specifically, we are grouping the products manufactured at the 28 nanometer (nm), 20nm and 16nm nodes into a category named Advanced Products while all other products are grouped in a category named Core Products.

No end customer accounted for more than 10% of our net revenues for the first quarter of fiscal 2019.

Net Revenues by Product

Net revenues by product categories for the first quarter of fiscal 2019 and 2018 were as follows:

(In millions)	Three Months Ended				
	June 30, 2018	% of Total	% Change	July 1, 2017	% of Total
Advanced Products	$383.9	56	21	$317.8	53
Core Products	300.5	44	5	285.0	47
Total net revenues	$684.4	100	14	$602.8	100

Net revenues from Advanced Products increased in the first three months of fiscal 2019 compared to the comparable prior year period. The increase was a result of sales growth from our 16nm and 20nm product families. We expect sales of Advanced Products to continue to grow as more customer programs enter into volume production with our 16nm and 20nm products.

Net revenues from Core Products increased in the first three months of fiscal 2019 from the comparable prior year period. The increase was largely due to higher sales from Virtex-2 and Virtex-5 product families, partially offset by decline in sales from Virtex-6 and Spartan-3 product families. Core Products are relatively mature products and, as a result, their sales are expected to decline over time.

Net Revenues by End Markets

Our end market revenue data is derived from our understanding of our end customers' primary markets, which is based on reports provided by distributors and our internal records. To provide additional visibility, starting April 1, 2018 we classify our end markets into businesses with similar market drivers: Data Center and Test, Measurement and Emulation (TME); Automotive, Broadcast and Consumer; Communications; and Industrial, Aerospace & Defense. Additionally, we classify revenue recognized from shipments to distributors but not yet subsequently sold to the end markets as Channel revenue. The Channel revenue represents the difference between the shipments to distributors and

what the distributors subsequently sold to the end customers within the given period. The percentage change calculation in the table below represents the year-to-year dollar change in each end market.

Table of Contents

Net revenues by end markets for the first quarter of fiscal 2019 and 2018 were as follows:

	Three Months Ended		
(% of total net revenues)	June 30, 2018	% Change in Dollars	July 1, 2017
Data Center and TME	19 %	11	19 %
Automotive, Broadcast and Consumer	16	13	17
Communications	31	(7)	38
Industrial, Aerospace & Defense	33	30	28
Channel	1	(167)	(2)
Total net revenues	100 %	14	100 %

Net revenues from Data Center and TME increased, in terms of absolute dollar, in the first quarter of fiscal 2019 from the comparable prior year period. The increase was primarily due to higher sales from Data Center, but was partially offset by a decrease in sales from TME.

Net revenues from Automotive, Broadcast and Consumer increased, in terms of absolute dollar, in the first three months of fiscal 2019 from the comparable prior year period. The increase was due to higher sales from all sub-segments, in particular from automotive and Audio, Video and Broadcast.

Net revenues from Communications decreased in the first three months of fiscal 2019 from the comparable prior year period. The decrease was primarily due to lower sales from Wireless, and to a lesser extent from Wireline business.

Net revenues from Industrial, Aerospace & Defense increased in the first quarter of fiscal 2019 from the comparable prior year period. The increase was driven by higher sales from all sub-segments, with Aerospace and Defense leading the increase.

Channel revenue was positive in the first three months of fiscal 2019. This is because shipments to distributors exceeded what the distributors subsequently shipped to their customers in the period. In the comparable prior year period, our shipments to distributors were less than what the distributors subsequently shipped to their customers. In the second half of fiscal 2018, we partnered with our distributors to reduce overall distributor inventory and improve the stability of inventory balances. We expect Channel revenue to be a positive amount as the distributors restock inventory to support growth and customer service objectives.

Net Revenues by Geography

Geographic revenue information reflects the geographic location of the distributors, original equipment manufacturers (OEMs) or contract manufacturers who purchased our products. This may differ from the geographic location of the end customers. Net revenues by geography for the first quarter of fiscal 2019 and 2018 were as follows:

	Three Months Ended				
(In millions)	June 30, 2018	% of Total	% Change	July 1, 2017	% of Total
North America	$193.5	28	12	$173.2	29
Asia Pacific	303.9	45	15	264.9	44
Europe	131.9	19	14	115.7	19

Japan	55.1	8	12	49.0	8
Total net revenues	$684.4	100	14	$602.8	100

Net revenues in North America increased in the first quarter of fiscal 2019 from the comparable prior year period. The increase was primarily due to higher sales from Industrial, Aerospace & Defense but was partially offset by decline in sales from TME.

Net revenues in Asia Pacific increased in the first quarter of fiscal 2019 from the comparable prior year period. The increase was primarily due to higher sales from Data Center in China and Aerospace & Defense in India.

27

Table of Contents

Net revenues in Europe increased in the first quarter of fiscal 2019 from the comparable prior year period. The increase was primarily due to higher sales from Industrial, Scientific and Medical and Data Center, but was partially offset by decline in sales from Wireless and TME.

Net revenues in Japan increased in the first quarter of fiscal 2019 from the comparable prior year period. The increase was due to higher sales from Automotive.

Gross Margin

(In millions)	Three Months Ended		
	June 30, 2018	Change	July 1, 2017
Gross margin	$477.5	16 %	$412.0
Percentage of net revenues	69.8 %		68.3 %

Gross margin was higher by 1.5 percentage points in the first quarter of fiscal 2019 from the comparable prior year period. The increase was driven primarily by manufacturing cost reduction in our Advanced Products and favorable changes in the end market mix.

Gross margin may be affected in the future due to multiple factors, including but not limited to those set forth in Item 1A. "Risk Factors," included in Part II of this Form 10-Q, shifts in the mix of customers and products, competitive-pricing pressure, manufacturing-yield issues and wafer pricing. We expect to mitigate any adverse impacts from these factors by continuing to improve yields on our Advanced Products, improve manufacturing efficiencies, and improve average selling price management. The average selling prices of our products generally decline as the products mature. We seek to offset the decrease in selling prices through yield improvement, manufacturing cost reductions and increased unit sales. We also continue to develop higher value products or product features that increase, or slow the decline of, the average selling price of our products. However, there is no guarantee that our ongoing efforts will be successful or that they will keep pace with the decline in selling prices of our products, which could ultimately lead to a decline in revenues and have a negative effect on our gross margins.

Research and Development

(In millions)	Three Months Ended		
	June 30, 2018	Change	July 1, 2017
Research and development	$170.8	12 %	$153.1
Percentage of net revenues	25 %		25 %

R&D spending increased by $17.7 million, or 12%, for the first quarter of fiscal 2019 from the comparable prior year period. The increase was primarily attributable to increase in headcount and employee compensation (including stock-based compensation) related to our continuing product development.

We plan to continue to selectively invest in R&D efforts in areas such as new products and more advanced process development, IP cores and software development environments. We may also consider acquisitions to complement our strategy for technology leadership and engineering resources in critical areas.

Selling, General and Administrative

Three Months Ended

(In millions)	June 30, 2018	Change	July 1, 2017
Selling, general and administrative	$90.5	1 %	$89.2
Percentage of net revenues	13 %		15 %

SG&A expenses increased slightly by $1.3 million for the first quarter of fiscal 2019 from the comparable prior year period as we incurred slightly higher employee compensation (including stock-based compensation) in the first three months of fiscal 2019 to support our customers and accelerate adoption of our products.

Table of Contents

Amortization of Acquisition-Related Intangibles

(In millions)	Three Months Ended June 30, 2018	Change	July 1, 2017
Amortization of acquisition-related intangibles	$0.4	(49)%	$0.7
Percentage of net revenues	— %		— %

Amortization expense for the first quarter of fiscal 2019 decreased slightly from the comparable prior year period as certain acquisition-related intangibles have been fully amortized and there was no new major addition to acquisition related intangibles in recent years.

Stock-Based Compensation

(In millions)	Three Months Ended June 30, 2018	Change	July 1, 2017
Stock-based compensation included in:			
Cost of revenues	$2.0	(5)%	$2.2
Research and development	20.9	20 %	17.4
Selling, general and administrative	12.7	2 %	12.4
	$35.6	11 %	$32.0

The 11% increase in stock-based compensation expense for the first quarter of fiscal 2019 as compared to the prior year period was primarily related to higher expenses associated with RSUs, as we granted RSUs at a higher fair value than in the prior years.

Interest and Other Income (Expense), Net

(In millions)	Three Months Ended June 30, 2018	Change	July 1, 2017
Interest and other income (expense), net	$(2.8)	(255)%	$ 1.8
Percentage of net revenues	— %		— %

Our net interest and other income (expense) was a net other expense of $2.8 million in the first quarter of fiscal 2019, as compared to a net other income of $1.8 million in the same prior year period. The net reduction was due to unrealized losses on equity-type security investments during the first quarter of fiscal 2019, which was partially offset by higher income from the investment portfolio.

Provision for Income Taxes

(In millions)	Three Months Ended June 30, 2018	Change	July 1, 2017
Provision for income taxes	$22.9	68 %	$13.7
Percentage of net revenues	3 %		2 %
Effective tax rate	11 %		8 %

The increase in the effective tax rate in the first quarter of fiscal 2019 as compared to the same prior year period was primarily due to the new tax on low-taxed income from foreign subsidiaries and a decrease in excess tax benefits with respect to stock-based compensation. The increase was partially offset by a significant reduction in the amount of

deferred tax accrued on foreign earnings not considered to be permanently reinvested.

The difference between the U.S. federal statutory tax rate of 21% and our effective tax rate in the first quarter of fiscal 2019 was primarily due to the beneficial impact of income earned in lower tax rate jurisdictions, which was partially offset by the new tax on low-taxed income from foreign subsidiaries.

Table of Contents

The difference between the U.S. federal statutory tax rate of 35% and our effective tax rate in the first quarter of fiscal 2018 was primarily due to income earned in lower tax rate jurisdictions, for which no U.S. income tax had been provided, as we intended to permanently reinvest these earnings outside of the U.S.

On December 22, 2017, the TCJA was enacted into law. The TCJA provides numerous significant tax law changes including the reduction of the U.S. federal corporate income tax rate from 35% to 21%, the requirement for companies to pay a one-time transition tax on earnings of certain foreign subsidiaries that were previously tax deferred and the creation of new taxes on certain foreign-sourced earnings. As a fiscal year-end taxpayer, certain provisions of the TCJA began to impact us in our third quarter of fiscal 2018, while other provisions began to impact us beginning in fiscal 2019.

Accounting Standards Codification (ASC) 740, Income Taxes, requires companies to recognize the effect of the tax law changes in the period of enactment. However, the SEC staff issued SAB 118 which allows companies to record provisional amounts during a measurement period that is similar to the measurement period used when accounting for business combinations. There are no measurement period adjustments recorded during the period ending June 30, 2018. We will continue to assess the impact of the recently enacted tax law on our business and our condensed consolidated financial statements. The final impact of the TCJA recorded by us may vary materially from the provisional impact recorded due to a number of uncertainties and factors, including the need for further guidance and clarification of the new law by U.S. federal and state tax authorities and the need for further guidance on the income tax accounting.

As noted above, the TCJA established new tax laws that are effective beginning in our fiscal 2019. The change with the most significant impact to us is a provision designed to tax low-taxed income of foreign subsidiaries. With respect to this provision, the FASB allows taxpayers to make an accounting policy choice of either (1) treating taxes due on U.S. inclusions in taxable income as a current-period expense when incurred or (2) recognizing deferred taxes for temporary basis differences expected to reverse as low-taxed income in future years. We have not yet selected an accounting policy and our selection will depend, in part, on analyzing our facts to determine what the impact is expected to be under each method.

Financial Condition, Liquidity and Capital Resources

We have historically used a combination of cash flows from operations and equity as well as debt financing to support ongoing business activities, acquire or invest in critical or complementary technologies, purchase facilities and capital equipment, repurchase our common stock and debentures under our repurchase program, pay dividends and finance working capital. Additionally, our investments in debt securities are liquid and available for future business needs.

The combination of cash, cash equivalents and short-term and long-term investments as of June 30, 2018 and March 31, 2018 totaled $3.46 billion and $3.55 billion, respectively. As of June 30, 2018, we had cash, cash equivalents and short-term investments of $3.36 billion and working capital of $3.18 billion. As of March 31, 2018, cash, cash equivalents and short-term investments were $3.45 billion and working capital was $3.24 billion.

As of June 30, 2018, we had $1.69 billion of cash and cash equivalents and short-term investments held in our non-U.S. jurisdictions. As a result of TCJA, substantially all of $1.69 billion of cash, cash equivalents and short-term investments held by our non-U.S. entities is available for use in the U.S. without incurring additional U.S federal income taxes.

Operating Activities —During the first quarter of fiscal 2019, our operations generated net positive cash flow of $176.2 million, which was $14.7 million lower than the $190.9 million generated during the first quarter of fiscal 2018. The

positive cash flow from operations generated during the first quarter of fiscal 2019 was primarily from net income as adjusted for non-cash related items, increases in income tax payable and accounts payable. These items were partially offset by increases in accounts receivable and inventories and a decrease in accrued liabilities. Accounts receivable increased by $74.7 million and days sales outstanding increased to 61 days at June 30, 2018 from 55 days at March 31, 2018. We had no collectibility issues and our accounts receivable remained current as of June 30, 2018. We expect our accounts receivable to be relatively higher than normal on a temporary basis as we partner with our distributors to manage their inventory requirements. Our inventory levels as of June 30, 2018 were $10.9 million higher at $247.0 million compared to $236.1 million at March 31, 2018, but the combined inventory days at Xilinx and distribution decreased to 113 days at June 30, 2018 from 117 days at March 31, 2018.

Investing Activities —Net cash used in investing activities was $444.2 million during the first quarter of fiscal 2019, as compared to $232.2 million in the first quarter of fiscal 2018. Net cash used in investing activities during the first quarter of fiscal 2019 consisted primarily of $403.9 million of net purchases of available-for-sale securities and $26.4 million for purchases of property, plant and equipment and other intangibles and $13.9 million of other investing activities.

Table of Contents

Financing Activities —Net cash used in financing activities was $233.9 million in the first quarter of fiscal 2019, as compared to net cash provided by financing activities of $134.0 million in the first quarter of fiscal 2018. Net cash used in financing activities during the first quarter of fiscal 2019 consisted primarily of $137.3 million of cash payment to repurchase shares of common stock, $90.7 million dividend payments to stockholders and $5.5 million of payment for RSU withholdings.

Contractual Obligations

We lease some of our facilities, office buildings and land under non-cancelable operating leases that expire at various dates through April 2029. See "Note 15. Commitments" to our condensed consolidated financial statements, included in Part I. "Financial Information," for a schedule of our operating lease commitments as of June 30, 2018 and additional information about operating leases.

Due to the nature of our business, we depend entirely upon subcontractors to manufacture our silicon wafers and provide assembly and some test services. The lengthy subcontractor lead times require us to order the materials and services in advance, and we are obligated to pay for the materials and services when completed. As of June 30, 2018, we had $136.5 million of outstanding inventory and other non-cancelable purchase obligations to subcontractors. We expect to receive and pay for these materials and services in the next three to six months, as the products meet delivery and quality specifications. As of June 30, 2018, we also had $18.9 million of non-cancelable license obligations to providers of electronic design automation software and hardware/software and $33.7 million commitments primarily related to open purchase orders from ordinary operations. These commitments expire at various dates through December 2022.

As of June 30, 2018, we had $530.2 million of liabilities classified as long-term income taxes payable in the condensed consolidated balance sheets. Of the $530.2 million, $512.5 million was the estimated long-term portion of the one-time transition tax that resulted from the enactment of the TCJA, which will be payable in eight annual installments. The first installment is classified as a current income tax payable. The installment amounts will be equal to 8% of the total liability, payable in fiscal 2019 through 2023, 15% in fiscal 2024, 20% in fiscal 2025, and 25% in fiscal 2026. See “Note 14. Income Taxes” to our condensed consolidated financial statements, included in “Part I. Financial Information,” for additional information about the one-time transition tax. The remaining $17.7 million of the long-term income taxes payable is for uncertain tax positions and related interest and penalties. Due to the inherent uncertainty with respect to the timing of future cash outflows associated with such liabilities, we are unable to reliably estimate the timing of cash settlement with the respective taxing authorities.

Off-Balance-Sheet Arrangements

As of June 30, 2018, we did not have any significant off-balance-sheet arrangements, as defined in Item 303(a)(4)(ii) of SEC Regulation S-K.

Liquidity and Capital Resources

Cash generated from operations is used as our primary source of liquidity and capital resources. Our investment portfolio is also available for future cash requirements as is our $400.0 million revolving credit facility entered into in December 2016 (expiring in December 2021). We are not aware of any lack of access to the revolving credit facility; however, we can provide no assurance that access to the revolving credit facility will not be impacted by adverse conditions in the financial markets. Our revolving credit facility is not reliant upon a single bank. There have been no borrowings to date under our existing revolving credit facility.

We repurchased 2.1 million shares of our common stock for $136.8 million during the first quarter of fiscal 2019. During the first quarter of fiscal 2018, we repurchased 1.0 million shares of common stock for a total of $67.1 million. During the first quarter of fiscal 2019, we paid $90.7 million in cash dividends to stockholders, representing $0.36 per common share. During the first quarter of fiscal 2018, we paid $87.3 million in cash dividends to stockholders, representing $0.35 per common share. On July 24, 2018 our Board of Directors declared a cash dividend of $0.36 per common share for the second quarter of fiscal 2019. The dividend is payable on August 28, 2018 to stockholders of record on August 8, 2018. Our common stock and debentures repurchase program and dividend policy could be impacted by, among other items, our views on potential future capital requirements relating to R&D, investments and acquisitions, legal risks, principal and interest payments on our debentures and other strategic investments.

We anticipate that existing sources of liquidity and cash flows from operations will be sufficient to satisfy our cash needs for the foreseeable future. We will continue to evaluate opportunities for investments to obtain additional wafer capacity, to procure additional capital equipment and facilities, to develop new products, and to potentially acquire technologies or businesses that could complement our business. However, the risk factors discussed in Item 1A included in Part II. "Risk Factors" and below could affect our cash positions adversely.

Table of Contents

Item 3. Quantitative and Qualitative Disclosures About Market Risk

Interest Rate Risk

Our exposure to interest rate risk relates to certain types of investments, which consist of fixed income securities with a fair value of approximately $2.93 billion as of June 30, 2018, and to our interest rate swap contracts in relation to the issuance of the 2024 Notes (as our interest rate swap contracts carry a variable interest rate based on LIBOR plus a spread). These investments include mortgage-backed securities, asset-backed securities, financial institution securities, non-financial institution securities, U.S. and foreign government and agency securities, debt mutual funds and commercial mortgage-backed securities. Our primary aim with our investment portfolio is to invest available cash while preserving principal and meeting liquidity needs. In accordance with our investment policy, we place investments with high credit quality issuers and limit the amount of credit exposure to any one issuer based upon the issuer's credit rating. These securities are subject to interest rate risk and will decrease in value if market interest rates increase. A hypothetical 100 basis-point (one percentage point) increase or decrease in interest rates compared to rates at June 30, 2018 would have affected the fair value of our investment portfolio by less than $38.0 million.

Credit Market Risk

The global credit markets may experience adverse conditions that negatively impact the values of various types of investment and non-investment grade securities. The global credit and capital markets may experience significant volatility and disruption due to instability in the global financial system, uncertainty related to global economic conditions and concerns regarding sovereign financial stability. Therefore, there is a risk that we may incur other-than-temporary impairment charges for certain types of investments should credit market conditions deteriorate. See "Note 5. Financial Instruments" to our condensed consolidated financial statements, included in Part 1. "Financial Information."

Foreign Currency Exchange Risk

Sales to all direct OEMs and distributors are denominated in U.S. dollars.

Gains and losses on foreign currency forward contracts that are designated as hedges of anticipated transactions, for which a firm commitment has been attained and the hedged relationship has been effective, are deferred and included in income or expenses in the same period that the underlying transaction is settled. Gains and losses on any instruments not meeting the above criteria are recognized in income or expenses in the condensed consolidated statements of income as they are incurred.

We enter into forward currency exchange contracts to hedge our overseas operating expenses and other liabilities when deemed appropriate. As of June 30, 2018 and March 31, 2018, we had the following outstanding forward currency exchange contracts (in notional amount):

(In millions and U.S. dollars)	June 30, 2018	March 31, 2018
Singapore Dollar	$ 26.4	$ 24.9
Euro	38.6	39.0
Indian Rupee	65.0	62.5
British Pound	8.1	8.1

Japanese Yen	3.9	3.8
Chinese Yuan	13.2	8.3
	$ 155.2	$ 146.6

As part of our strategy to reduce volatility of operating expenses due to foreign exchange rate fluctuations, we employ a hedging program with forward outlook of up to two years for major foreign-currency-denominated operating expenses. The outstanding forward currency exchange contracts expire at various dates through May 2020. The net unrealized losses, which approximate the fair market value of the forward currency exchange contracts, are expected to be realized into net income within the next two years.

Table of Contents

Our investments in several of our wholly-owned subsidiaries are recorded in currencies other than the U.S. dollar. As the financial statements of these subsidiaries are translated at each quarter end during consolidation, fluctuations of exchange rates between the foreign currency and the U.S. dollar increase or decrease the value of those investments. These fluctuations are recorded within stockholders' equity as a component of accumulated other comprehensive income (loss). Other monetary foreign-denominated assets and liabilities are revalued on a monthly basis with gains and losses on revaluation reflected in net income. A hypothetical 10% favorable or unfavorable change in foreign currency exchange rates at June 30, 2018 would have affected the annualized foreign-currency-denominated operating expenses of our foreign subsidiaries by less than $13.0 million. In addition, a hypothetical 10% favorable or unfavorable change in foreign currency exchange rates compared to rates at June 30, 2018 would have affected the value of foreign-currency-denominated cash and investments by less than $7.0 million.

Table of Contents

Item 4. Controls and Procedures

We maintain a system of disclosure controls and procedures designed to ensure that information required to be disclosed in our reports filed or submitted under the U.S. Securities Exchange Act of 1934, as amended (Exchange Act), is recorded, processed, summarized and reported within the time periods specified in the SEC rules and forms. These controls and procedures are also designed to ensure that such information is accumulated and communicated to our management, including the Chief Executive Officer (CEO) and Chief Financial Officer (CFO), as appropriate to allow timely decisions regarding required disclosure. Internal controls are procedures designed to provide reasonable assurance that: transactions are properly authorized; assets are safeguarded against unauthorized or improper use; and transactions are properly recorded and reported, to permit the preparation of our financial statements in conformity with generally accepted accounting principles.

A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance that the control system's objectives will be met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within the company have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty, and that breakdowns can occur because of simple errors or mistakes. Controls can also be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the controls. The design of any system of controls is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Over time, controls may become inadequate because of changes in conditions or deterioration in the degree of compliance with its policies or procedures. Because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected. We continuously evaluate our internal controls and make changes to improve them as necessary. Our intent is to maintain our disclosure controls as dynamic systems that change as conditions warrant.

An evaluation was carried out, under the supervision of and with the participation of our management, including our CEO and CFO, of the effectiveness of our disclosure controls and procedures (as defined in Rules 13a–15(e) and 15d–15(e) under the Exchange Act) as of the end of the period covered by this report. Based upon this evaluation, our CEO and CFO have concluded that, as of the end of the period covered by this Form 10-Q, our disclosure controls and procedures are effective to provide reasonable assurance that information required to be disclosed in our Exchange Act reports is recorded, processed, summarized and reported within the time periods specified in the SEC rules and forms, and is accumulated and communicated to our management, including our CEO and CFO, as appropriate to allow timely decisions regarding required disclosure.

There were no changes in our internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) during the fiscal quarter ended June 30, 2018 that materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Table of Contents

PART II. OTHER INFORMATION

Item 1. Legal Proceedings

See "Note 17. Contingencies" to our condensed consolidated financial statements, included in Item 1. "Financial Statements" for information regarding patent litigation.

Item 1A. Risk Factors

The following risk factors and other information included in this Quarterly Report on Form 10-Q should be carefully considered. The risks and uncertainties described below are not the only risks to the Company. Additional risks and uncertainties not presently known to the Company or that the Company's management currently deems immaterial also may impair its business operations. If any of the risks described below were to occur, our business, financial condition, operating results and cash flows could be materially adversely affected.

Our success depends on our ability to develop and introduce new products and failure to do so would have a material adverse impact on our financial condition and results of operations.

Our success depends in large part on our ability to develop and introduce new products that address customer requirements and compete effectively on the basis of price, density, functionality, power consumption and performance. Consolidation in our industry may increasingly mean that our competitors have greater resources, or other synergies, that provide them with a competitive advantage in those regards. The success of new product introductions is dependent upon several factors, including:

- timely completion of new product designs;
- ability to generate new design opportunities and design wins;
- availability of specialized field application engineering resources supporting demand creation and customer adoption of new products;
- ability to utilize advanced manufacturing process technologies on circuit geometries of 28nm and smaller;
- achieving acceptable yields;
- ability to obtain adequate production capacity from our wafer foundries and assembly and test subcontractors;
- ability to obtain advanced packaging;
- availability of supporting software design tools;
- utilization of predefined IP logic;
- customer acceptance of advanced features in our new products;
- ability of our customers to complete their product designs and bring them to market; and
- market acceptance of our customers' products.

Our product development efforts may not be successful, our new products may not achieve industry acceptance and we may not achieve the necessary volume of production that would lead to further per unit cost reductions. Revenues relating to our mature products are expected to decline in the future, which is normal for our product life cycles. As a result, we may be increasingly dependent on revenues derived from design wins for our newer products as well as anticipated cost reductions in the manufacture of our current products. We rely primarily on obtaining yield improvements and corresponding cost reductions in the manufacture of existing products, and on introducing new products that incorporate advanced features and other price/performance factors that enable us to increase revenues while maintaining consistent margins. To the extent that such cost reductions and new product introductions do not occur in a timely manner, or to the extent that our products do not achieve market acceptance at prices with higher

margins, our financial condition and results of operations could be materially adversely affected.

Table of Contents

We rely on independent foundries for the manufacture of all of our products and a manufacturing problem or insufficient foundry capacity could adversely affect our operations.

Most of our wafers are manufactured in Taiwan by Taiwan Semiconductor Manufacturing Company (TSMC) and United Microelectronics Corporation (UMC). In addition, we also have wafers manufactured in South Korea by Samsung Electronics Co., Ltd. Terms with respect to the volume and timing of wafer production and the pricing of wafers produced by the semiconductor foundries are determined through periodic negotiations with these wafer foundries, which usually result in short-term agreements that do not provide for long-term supply or allocation commitments. We are dependent on these foundries to supply the substantial majority of our wafers. We rely on TSMC, UMC and our other foundries to produce wafers with competitive performance attributes. Therefore, the foundries, particularly TSMC who manufactures our newest products, must be able to transition to advanced manufacturing process technologies and increased wafer sizes, produce wafers at acceptable yields and deliver them in a timely manner. Furthermore, we cannot guarantee that the foundries that supply our wafers will offer us competitive pricing terms or other commercial terms important to our business.

We cannot guarantee that our foundries will not experience manufacturing problems, including delays in the realization of advanced manufacturing process technologies or difficulties due to limitations of new and existing process technologies. For example, we may experience supply shortages due to the difficulties foundries may encounter if they must rapidly increase their production capacities from low utilization levels to high utilization levels because of an unexpected increase in demand. Furthermore, we cannot guarantee that the foundries will be able to manufacture sufficient quantities of our products or that they will continue to manufacture a given product for the full life of the product. We could also experience supply shortages due to very strong demand for our products, or a surge in demand for semiconductors in general, which may lead to tightening of foundry capacity across the industry. In addition, weak economic conditions may adversely impact the financial health and viability of the foundries and result in their insolvency or their inability to meet their commitments to us. The insolvency of a foundry or any significant manufacturing problem or insufficient foundry capacity would disrupt our operations and negatively impact our financial condition and results of operations.

Earthquakes and other natural disasters could disrupt our operations and have a material adverse effect on our financial condition and results of operations.

Our worldwide operations could be disrupted by earthquakes or other natural disasters such as typhoons, tsunamis, volcano eruptions, fires or floods, as well as disruptions in access to adequate supplies of electricity, natural gas or water. The independent foundries, upon which we rely to manufacture our products, as well as our California and Singapore facilities, are located in regions that are subject to earthquakes and other natural disasters. TSMC's and UMC's foundries in Taiwan and our assembly and test partners in other regions as well as many of our operations in California are located in areas that have been seismically active in the past and some of these areas have also been affected by other natural disasters such as typhoons. Disruption of operations at these foundries and our facilities could cause delays in manufacturing and shipments of our products, and could have a material adverse effect on our results of operations. Any catastrophic event in these locations would disrupt our operations, and our insurance may not cover losses resulting from such disruptions of our operations, thereby materially adversely affecting our financial condition and results of operations. For example, as a result of the March 2011 earthquake in Japan, production at the Seiko factory at Sakata was halted temporarily, impacting production of some of our older devices. In addition, suppliers of wafers and substrates were forced to halt production temporarily. Furthermore, natural disasters can also indirectly impact us. For example, our customers' supply of other complimentary products may be disrupted by a natural disaster and may cause them to delay orders of our products. More vertically-integrated competitors may be less exposed to some or all of these and other risks.

The semiconductor industry is characterized by cyclical market patterns and a significant industry downturn could adversely affect our operating results.

The semiconductor industry is highly cyclical and our financial performance has been affected by downturns in the industry. Down cycles are generally characterized by price erosion and weaker demand for our products. Weaker demand for our products resulting from economic conditions in the end markets we serve and reduced capital spending by our customers can result, and in the past has resulted, in excess and obsolete inventories and corresponding inventory write-downs. We attempt to identify changes in market conditions as soon as possible; however, the dynamics of the market in which we operate make prediction of and timely reaction to such events difficult. Due to these and other factors, our past results are not reliable predictors of our future results.

Table of Contents

The nature of our business makes our revenues difficult to predict which could have an adverse impact on our business.

In addition to the challenging market conditions we may face, we have limited visibility into the demand for our products, particularly new products, because demand for our products depends upon our products being designed into our end customers' products and those products achieving market acceptance. Due to the complexity of our customers' designs, the design to volume production process for our customers requires a substantial amount of time, frequently longer than a year. In addition, other factors may affect our end customers' demand for our products, including, but not limited to, end customer program delays and the ability of end customers to secure other complementary products. We also are dependent upon "turns," orders received and turned for shipment in the same quarter. These factors make it difficult for us to forecast future sales and project quarterly revenues. The difficulty in forecasting future sales impairs our ability to project our inventory requirements, which could result, and in the past has resulted, in inventory write-downs or failure to meet customer product demands in a timely manner. In addition, difficulty in forecasting revenues compromises our ability to provide forward-looking revenue and earnings guidance.

If we are not able to compete successfully in our industry, our financial results and future prospects will be adversely affected.

Our programmable logic devices (PLDs) compete in the integrated circuits (IC) industry, an industry that is intensely competitive, continues to consolidate, and is characterized by rapid technological change, increasing levels of integration, product obsolescence and continuous price erosion. We expect increased competition from our primary PLD competitors, Intel, Lattice and Microsemi, and from new market entrants. In addition, competition from the application specific integrated circuits (ASIC) market and from the application specific standard products (ASSP) market continues. We believe that important competitive factors in the logic IC industry include:

- product pricing;
- time-to-market;
- product performance, reliability, quality, power consumption and density;
- field upgradeability;
- adaptability of products to specific applications;
- ease of use and functionality of software design tools;
- availability and functionality of predefined IP logic;
- inventory and supply chain management;
- access to leading-edge process technology and assembly capacity;
- ability to provide timely customer service and support; and
- access to advanced packaging technology.

Our strategy for expansion in the logic market includes continued introduction of new product architectures that address high-volume, low-cost and low-power applications as well as high-performance, high-density applications. However, we may not be successful in executing this strategy. In addition, we anticipate continued pressure from our customers to reduce prices, which may outpace our ability to lower the cost for established products.

Other competitors include manufacturers of:

- high-density programmable logic products characterized by field programmable gate arrays (FPGA) type architectures;
- high-volume and low-cost FPGAs as programmable replacements for ASICs and ASSPs;

- ASICs and ASSPs with incremental amounts of embedded programmable logic;
- high-speed, low-density complex programmable logic devices;
- high-performance digital signal processing devices;
- products with analog, mixed signal and digital signal processing capabilities;
- products with embedded processors;
- products with embedded multi-gigabit transceivers;
- discrete general purpose GPUs targeting non-graphics applications; and
- other new or emerging programmable logic products.

Several companies have introduced products that compete with ours or have announced their intention to sell PLD products. To the extent that our efforts to compete are not successful, our financial condition and results of operations could be materially adversely affected.

Table of Contents

The benefits of programmable logic have attracted a number of competitors to this segment. We recognize that different applications require different programmable technologies, and we are developing architectures, processes and products to meet these varying customer needs. Recognizing the increasing importance of standard software solutions, we have developed common software design tools that support the full range of our IC products. We believe that automation and ease of design are significant competitive factors in this segment.

We could also face competition from our licensees. In the past we have granted limited rights to other companies with respect to certain aspects of our older technology, and we may do so in the future. Granting such rights may enable these companies to manufacture and market products that may be competitive with some of our older products.

Increased costs of wafers and materials, or shortages in wafers and materials, could adversely impact our gross margins and lead to reduced revenues.

If greater demand for wafers is not offset by an increase in foundry capacity, market demand for wafers or production and assembly materials increases, or if a supplier of our wafers or other materials ceases or suspends operations, our supply of wafers and other materials could become limited. Such shortages raise the likelihood of potential wafer price increases, wafer shortages or shortages in materials at production and test facilities, resulting in potential inability to address customer product demands in a timely manner. For example, in 2011, when certain suppliers located in Japan were forced to temporarily halt production as the result of a natural disaster, this resulted in a tightening of supply for those materials. Such shortages of wafers and materials as well as increases in wafer or materials prices could adversely affect our gross margins and would adversely affect our ability to meet customer demands and lead to reduced revenue.

We depend on distributors, primarily Avnet, to generate a significant portion of our sales and complete order fulfillment.

Resale of product through Avnet accounted for 51% of our worldwide net revenues in the first quarter of fiscal 2019 and as of June 30, 2018, Avnet accounted for 70% of our total net accounts receivable. Any adverse change to our relationship with Avnet or our remaining distributors could have a material impact on our business. Furthermore, if a key distributor materially defaults on a contract or otherwise fails to perform, our business and financial results would suffer. In addition, we are subject to concentrations of credit risk in our trade accounts receivable, which includes accounts of our distributors. A significant reduction of effort by a distributor to sell our products or a material change in our relationship with one or more distributors may reduce our access to certain end customers and adversely affect our ability to sell our products.

In addition, the financial health of our distributors and our continuing relationships with them are important to our success. Unpredictable economic conditions may adversely impact the financial health of some of these distributors, particularly our smaller distributors. This could increase our credit risk exposure relating to the insolvency of certain distributors, the inability of distributors to obtain credit to finance the purchase of our products, or delayed payment for such purchases. Our business could be harmed if the financial health of these distributors impaired their performance and we were unable to secure alternate distributors.

We are dependent on independent subcontractors for most of our assembly and test services, and unavailability or disruption of these services could negatively impact our financial condition and results of operations.

We are dependent on subcontractors to provide semiconductor assembly, substrate, test and shipment services. Any (i) prolonged inability to obtain wafers with competitive performance and cost attributes, adequate yields or timely

delivery, (ii) disruption in assembly, test or shipment services, (iii) delays in stabilizing manufacturing processes and ramping up volume for new products, (iv) transitions to new service providers, or (v) other circumstance that would require us to seek alternative sources of supply, could delay shipments and have a material adverse effect on our ability to meet customer demands. In addition, unpredictable economic conditions may adversely impact the financial health and viability of these subcontractors and result in their insolvency or their inability to meet their commitments to us. These factors would result in reduced net revenues and could negatively impact our financial condition and results of operations.

Table of Contents

A number of factors, including our inventory strategy, can impact our gross margins.

A number of factors can cause our gross margins to fluctuate, including yield, wafer pricing, product mix, market acceptance of our new products, competitive pricing dynamics, licensing costs, geographic and/or market segment pricing strategies. In addition, forecasting our gross margins is difficult because a significant portion of our business is based on turns within the same quarter.

While our overall inventory levels fluctuate over time, the inventory of newer product lines may be higher than other products due to a planned increase in safety stock in anticipation of future revenue growth. In the event demand does not materialize, we may be subject to incremental obsolescence costs. In addition, future product cost reductions could have impact on our inventory valuation as well as our operating results.

Reductions in the average selling prices of our products could have a negative impact on our gross margins.

The average selling prices of our products generally decline as the products mature. We seek to offset the decrease in selling prices through yield improvement, manufacturing cost reductions and increased unit sales. We also continue to develop higher value products or product features that increase the average selling prices of our products or slow the decline of such prices. However, there is no guarantee that our ongoing efforts will be successful or that they will keep pace with the decline in selling prices of our products, which could ultimately lead to a decline in our revenues and gross margins.

General negative economic conditions and any related deterioration in the global business environment could have a material adverse effect on our business, operating results and financial condition.

If weak economic conditions happen, there may be a number of negative effects on our business, including customers or potential customers reducing or delaying orders, the insolvency of key suppliers, potentially causing production delays, the inability of customers to obtain credit, and the insolvency of one or more customers. Any of these effects could impact our ability to effectively manage inventory levels and collect receivables and ultimately decrease our net revenues and profitability.

We are subject to the risks associated with conducting business operations outside of the U.S. which could adversely affect our business.

In addition to international sales and support operations and development activities, we purchase our wafers from foreign foundries, have our commercial products assembled, packaged and tested by subcontractors located outside the U.S. and utilize third party warehouse operators to store and manage inventory levels for certain of our products. All of these activities are subject to the uncertainties associated with international business operations, including global laws and regulations, trade barriers, economic sanctions, tax regulations, import and export regulations, duties and tariffs and other trade restrictions, changes in trade policies, anti-corruption laws, foreign governmental regulations, potential vulnerability of and reduced protection for IP, longer receivable collection periods and disruptions or delays in production or shipments, any of which could have a material adverse effect on our business, financial condition and/or operating results. As an example of such uncertainties, in recent years ZTE Corporation (ZTE) has been subject to a number of government restrictions affecting our ability to do business with ZTE; the terms and duration of any such restriction have not been known to us in advance and have been subject to ongoing modifications. Additional factors that could adversely affect us due to our international operations include rising oil prices and increased costs, or limited supply of other natural resources. Moreover, our financial condition and results of operations could be adversely affected in the event of political conflicts, economic crises or changes in international relations affecting countries where our main wafer providers, warehouses, end customers and contract manufacturers

who provide assembly and test services worldwide, are located. For example, the United Kingdom's pending exit from the European Union, commonly referred to as "Brexit", has led to significant instability and uncertainty in such regions, which could have a material adverse effect on our business. In addition, in the first half of 2018, the U.S and China began threatening to impose tariffs on each other's products, leading to fears of a trade war, which, if were to materialize, could result in general economic downturn or otherwise have a material adverse effect on our business.

Table of Contents

Because of our international business and operations, we are vulnerable to the economic conditions of the countries in which we operate and currency fluctuations could have a material adverse effect on our business and negatively impact our financial condition and results of operations.

In addition to our U.S. operations, we also have significant international operations, including foreign sales offices to support our international customers and distributors, our regional headquarters in Ireland and Singapore and an R&D site in India. Sales and operations outside of the U.S. subject us to the risks associated with conducting business in foreign economic and regulatory environments. Our financial condition and results of operations could be adversely affected by unfavorable economic conditions in countries in which we do significant business or by changes in foreign currency exchange rates affecting those countries. We derive more than half of our revenues from international sales, primarily in the Asia Pacific region, Europe and Japan where economic weaknesses have adversely affected our revenues in the past. Sales to all direct OEMs and distributors are denominated in U.S. dollars. While the recent movements of the Euro and Yen exchange rates against the U.S. dollar had no material impact on our business, increased volatility could impact our European and Japanese customers. Currency instability and volatility and disruptions in the credit and capital markets may increase credit risks for some of our customers and may impair our customers' ability to repay existing obligations. For example, the United Kingdom's 2016 referendum vote to approve "Brexit" has created economic uncertainty and currency volatility in the European Union. Increased currency volatility could also positively or negatively impact our foreign-currency-denominated costs, assets and liabilities. In addition, any devaluation of the U.S. dollar relative to other foreign currencies may increase the operating expenses of our foreign subsidiaries adversely affecting our results of operations. Furthermore, because we are increasingly dependent on the global economy, instability in worldwide economic environments occasioned, for example, directly or indirectly by political instability (such as due to Brexit), terrorist activity, U.S. or other military actions, changes to U.S. domestic and foreign policy and international sanctions or other diplomatic actions (potentially including sanctions adopted or under consideration by the U.S. or European Union with respect to Russia or Russian individuals or businesses), could adversely impact economic activity and lead to a contraction of capital spending by our customers generally or in specific regions. Any or all of these factors could adversely affect our financial condition and results of operations in the future.

We are exposed to fluctuations in interest rates and changes in credit rating and in the market values of our portfolio investments which could have a material adverse impact on our financial condition and results of operations.

Our cash, short-term and long-term investments represent significant assets that may be subject to fluctuating or even negative returns depending upon interest rate movements, changes in credit rating and financial market conditions. Global credit market disruptions and economic slowdown and uncertainty have in the past negatively impacted the values of various types of investment and non-investment grade securities. The global credit and capital markets may again experience significant volatility and disruption due to instability in the global financial system, uncertainty related to global economic conditions and concerns regarding sovereign financial stability.

Therefore, there is a risk that we may incur other-than-temporary impairment charges for certain types of investments should credit market conditions deteriorate or the underlying assets fail to perform as anticipated. Our future investment income may fall short of expectations due to changes in interest rates or if the decline in fair values of our debt securities was judged to be other than temporary. Furthermore, we may suffer losses in principal if we are forced to sell securities that have declined in market value due to changes in interest rates or financial market conditions.

Our failure to protect and defend our IP could impair our ability to compete effectively.

We rely upon patent, copyright, trade secret, mask work and trademark laws to protect our IP. We cannot provide assurance that such IP rights can be successfully asserted in the future or will not be invalidated, violated,

circumvented or challenged. From time to time, third parties, including our competitors, have asserted against us patent, copyright or other IP rights to technologies that are important to us. Third parties may attempt to misappropriate our IP through electronic or other means or assert infringement claims against us or parties we have agreed to indemnify. Such assertions by third parties may result in costly litigation, indemnity claims or other legal actions, and we may not prevail in such matters or be able to license any valid and infringed patents from third parties on commercially reasonable terms. This could result in the loss of our ability to import and sell our products or require us to pay costly royalties to third parties in connection with sales of our products. Any infringement claim, indemnification claim, or impairment or loss of use of our IP could materially adversely affect our financial condition and results of operations.

Table of Contents

Our ability to design and introduce new products in a timely manner is dependent upon third-party IP.

In the design and development of new products and product enhancements, we rely on third-party intellectual property such as software development tools and hardware testing tools. Furthermore, certain product features may rely on intellectual property acquired from third parties, including hardware and software tools and products. The design requirements necessary to meet future consumer demands for more features and greater functionality from semiconductor products may exceed the capabilities of the third-party intellectual property or development tools that are available to us. In addition, hardware and software tools and products procured from third parties may contain design or manufacturing defects, including flaws that could unexpectedly interfere with the operation of our products. If the third-party intellectual property that we use becomes unavailable or fails to produce designs that meet consumer demands, our business could be adversely affected.

Any failure of our information technology systems to function properly could result in business disruption.

We rely in part on various information technology (IT) systems to manage our operations, including, but not limited to, financial reporting, and we regularly evaluate these systems and make changes to improve them as necessary. Consequently, we periodically implement new, or upgrade or enhance existing, operational and IT systems, procedures and controls. Any delay in the implementation of, or disruption in the transition to, new or enhanced systems, procedures or controls, could harm our ability to record and report financial, management, or operational information on a timely and accurate basis. In addition, hardware and software tools and products procured from third parties included in our IT systems could contain design or manufacturing defects, including flaws that could unexpectedly interfere with the operation of our IT systems. These systems are also subject to power and telecommunication outages or other general system failures. Failure of our IT systems or difficulties in managing them could result in business disruption.

Cyber-attacks and data breaches could have an adverse effect on our business and reputation and negatively impact our financial condition and results of operations.

Security breaches, including cyber-attacks, phishing attacks or attempts to misappropriate or compromise confidential or proprietary information or sabotage enterprise IT systems, are becoming increasingly frequent and more sophisticated. We depend on the uninterrupted operation of our IT systems to manage our operations, store and retrieve business and financial data and facilitate internal communications and communications with customers, subcontractors, suppliers and distribution partners. We experience security incidents of varying degrees on an ongoing basis. We take steps to detect and investigate any security incidents and prevent their recurrence, but, in some cases, we might be unaware of an incident or its magnitude and effects. Because the techniques used to obtain unauthorized access to or sabotage networks and systems change frequently, we may be unable to anticipate these techniques or to implement adequate protections. These security incidents may involve unauthorized access, misuse or disclosure of intellectual property or confidential or proprietary information regarding our business or that of our customers or business partners. We also may be subject to unauthorized access to our IT systems through a security breach or cyber-attack. In the past there have been attempts by third parties to penetrate and/or infect our network and systems with malicious software in an effort to gain access to our network and systems. Recently, several large organizations have been infected by “ransomware,” through which an attacker gains access to the organization’s computer files, renders them temporarily inaccessible and threatens to permanently delete them if a cash ransom is not paid by a specified deadline. Third parties may continue to attempt to fraudulently induce employees, users, or customers to disclose sensitive information in order to gain access to our network and systems. The IT systems of our customers, suppliers, and distribution partners and the links between our IT systems and our customers are subject to the same risks as those of our IT systems. In the event of a security breach, our business and reputation could be harmed and we could be subject to legal and regulatory claims which could negatively impact our financial condition and results of operations.

Acquisitions and strategic investments present risks, and we may not realize the goals that were contemplated at the time of a transaction.

In the past, we have acquired technology companies whose products complement our products. We also have made a number of strategic investments in other technology companies. We may make similar acquisitions and strategic investments in the future. Acquisitions and strategic investments present risks, including:

- our ongoing business may be disrupted and our management's attention may be diverted by investment, acquisition, transition or integration activities;
- an acquisition or strategic investment may not further our business strategy as we expected, and we may not integrate an acquired company or technology as successfully as we expected;
- our operating results or financial condition may be adversely impacted by claims or liabilities that we assume from an acquired company or technology or that are otherwise related to an acquisition;

Table of Contents

- we may have difficulty incorporating acquired technologies or products with our existing product lines;
- we may have higher than anticipated costs in continuing support and development of acquired products, and in general and administrative functions that support such products;
- our strategic investments may not perform as expected; and
- we may experience unexpected changes in how we are required to account for our acquisitions and strategic investments pursuant to U.S. GAAP.

The occurrence of any of these risks could have a material adverse effect on our business, results of operations, financial condition or cash flows, particularly in the case of a larger acquisition or several concurrent acquisitions or strategic investments.

If we are unable to maintain effective internal controls, our stock price could be adversely affected.

We are subject to the ongoing internal control provisions of Section 404 of the Sarbanes-Oxley Act of 2002 (the Sarbanes-Oxley Act). Our controls necessary for continued compliance with the Sarbanes-Oxley Act may not operate effectively at all times and may result in a material weakness disclosure. The identification of material weaknesses in internal control, if any, could indicate a lack of proper controls to generate accurate financial statements and could cause investors to lose confidence and our stock price to drop.

We compete with others to attract and retain key personnel, and any loss of, or inability to attract, such personnel would harm us.

We depend on the efforts and abilities of certain key members of management and other technical personnel. Our future success depends, in part, upon our ability to retain, develop and transition such personnel and attract and retain other highly qualified personnel, particularly product engineers. Competition for such personnel is intense and we may not be successful in hiring or retaining new or existing qualified personnel. Changes to the U.S. immigration laws may also impact the availability of qualified personnel. From time to time we have effected restructuring that eliminate a number of positions. Even if such personnel are not directly affected by the restructuring effort, such terminations can have a negative impact on morale and our ability to attract and hire new qualified personnel in the future. If we are unable to retain or develop existing qualified personnel or are unable to hire new qualified personnel, as needed, our business, financial condition and results of operations could be seriously harmed. Further, changes to our qualified personnel, including key members of management, may be disruptive to our business, and any failure to successfully assimilate key new hires, or to successfully retain, develop and transition promoted employees, could adversely affect our business and results of operations.

Unfavorable results of legal proceedings could adversely affect our financial condition and operating results.

From time to time we are subject to various legal proceedings and claims that arise out of the ordinary conduct of our business. The amount of damages alleged in certain legal claims may be significant. Certain other claims involving the Company are not yet resolved, including those that are discussed under "Note 16. Litigation Settlement and Contingencies" to our consolidated financial statements, included in Item 8. "Financial Statements and Supplementary Data" of this Form 10-K, and additional claims may arise in the future. Results of legal proceedings cannot be predicted with certainty. Regardless of its merit, litigation may be both time-consuming and disruptive to our operations and cause significant expense and diversion of management attention and we may enter into material settlements to avoid these risks. Entering into settlements may result in payment of significant amounts which may materially and adversely affect our financial condition and operation results. Should we fail to prevail in certain matters, or should several of these matters be resolved against us, we may be faced with significant monetary damages or injunctive relief against us that would materially and adversely affect a portion of our business and might materially

and adversely affect our financial condition and operating results.

Our products could have defects which could result in reduced revenues and claims against us.

We develop complex and evolving products that include both hardware and software. Despite our testing efforts and those of our subcontractors, defects may be discovered in existing or new products. Such defects may cause us to incur significant warranty, support and repair or replacement costs, divert the attention of our engineering personnel from our product development efforts and harm our relationships with customers. Subject to certain terms and conditions, we have agreed to compensate certain customers for limited specified costs they actually incur in the event our hardware products experience epidemic failure. As a result, epidemic failure and other performance problems could result in claims against us or the delay or loss of market acceptance of our products and would likely harm our business. Our customers could also seek damages from us for their losses.

Table of Contents

In addition, we could be subject to product liability claims. A product liability claim brought against us, even if unsuccessful, would likely be time-consuming and costly to defend. Product liability risks are particularly significant with respect to aerospace, automotive and medical applications because of the risk of serious harm to users of these products. Any product liability claim, whether or not determined in our favor, could result in significant expense, divert the efforts of our technical and management personnel, and harm our business.

In preparing our financial statements, we make good faith estimates and judgments that may change or turn out to be erroneous.

In preparing our financial statements in conformity with accounting principles generally accepted in the U.S., we must make estimates and judgments in applying our critical accounting policies. Those estimates and judgments have a significant impact on the results we report in our consolidated financial statements. The most difficult estimates and subjective judgments that we make concern valuation of marketable and non-marketable securities, revenue recognition, inventories, long-lived assets including acquisition-related intangibles, goodwill, taxes and stock-based compensation. We base our estimates on historical experience, input from outside experts and various other assumptions that we believe to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. We also have other key accounting policies that are not as subjective, and therefore, their application would not require us to make estimates or judgments that are as difficult, but which nevertheless could significantly affect our financial reporting. Actual results may differ materially from these estimates. If these estimates or their related assumptions change, our operating results for the periods in which we revise our estimates or assumptions could be adversely and materially affected.

Our failure to comply with the requirements of the Export Administration Regulations (EAR) and the International Traffic and Arms Regulations (ITAR) could have a material adverse effect on our financial condition and results of operations.

Our FPGAs and related technologies are subject to EAR, which are administered by the U.S. Department of Commerce. In addition, we may, from time to time, receive technical data from third parties that is subject to the ITAR, which are administered by the U.S. Department of State. EAR and ITAR govern the export and re-export of these FPGAs, the transfer of related technologies, whether in the U.S. or abroad, and the provision of services. We are required to maintain an internal compliance program and security infrastructure to meet EAR and ITAR requirements.

An inability to obtain the required export licenses, or to predict when they will be granted, increases the difficulties of forecasting shipments. In addition, security or compliance program failures that could result in penalties or a loss of export privileges, as well as stringent licensing restrictions that may make our products less attractive to overseas customers, could have a material adverse effect on our business, financial condition and/or operating results.

Our inability to effectively control the sale of our products on the gray market could have a material adverse effect on us.

We market and sell our products directly to OEMs and through authorized third-party distributors which helps to ensure that products delivered to our customers are authentic and properly handled. From time to time, customers may purchase products bearing our name from the unauthorized "gray market." These parts may be counterfeit, salvaged or re-marked parts, or parts that have been altered, mishandled, or damaged. Gray market products result in shadow inventory that is not visible to us, thus making it difficult to forecast supply or demand. Also, when gray market products enter the market, we and our authorized distributors may compete with brokers of these discounted products, which can adversely affect demand for our products and negatively impact our margins. In addition, our

reputation with customers may be negatively impacted when gray market products bearing our name fail or are found to be substandard.

Table of Contents

The conflict minerals provisions of the Dodd-Frank Wall Street Reform and Consumer Protection Act could result in additional costs and liabilities.

In accordance with the Dodd-Frank Wall Street Reform and Consumer Protection Act, the SEC established disclosure and reporting requirements for companies whose products incorporate "conflict" minerals mined from the Democratic Republic of Congo and adjoining countries, regardless of whether such products are manufactured by those companies or by third parties. These requirements could affect the sourcing and availability of minerals used in the manufacture of our semiconductor products. The costs associated with complying with the disclosure requirements include those for due diligence in regard to the sources of any conflict minerals used in our products, remediation and other changes to products, processes, or sources of supply as a consequence of such verification activities. We may face reputational challenges if we are unable to sufficiently verify the origins for all minerals used in our products through the due diligence process we implement. Moreover, some of our customers may require that all of the components of our products are certified as conflict-free, and we may be unable to verify the origin of the raw materials used in our products to the extent necessary to make this certification.

Exposure to greater than anticipated income tax liabilities, changes in tax rules and regulations, changes in interpretation of tax rules and regulations, or unfavorable assessments from tax audits could affect our effective tax rates, financial condition and results of operations.

We are a U.S.-based multinational company subject to tax in multiple U.S. and foreign tax jurisdictions. Our income tax obligations could be affected by many factors, including but not limited to changes to our corporate operating structure, intercompany arrangements and tax planning strategies.

Our income tax expense is computed based on tax rates at the time of the respective financial period. Our future effective tax rates, financial condition and results from operations could be unfavorably affected by changes in the tax rates in jurisdictions where our income is earned, by changes in the tax rules and regulations or the interpretation of tax rules and regulations in the jurisdictions in which we do business or by changes in the valuation of our deferred tax assets.

Recently enacted U.S. tax legislation significantly changed the taxation of U.S.-based multinational corporations, by, among other things, reducing the U.S. corporate income tax rate, adopting elements of a territorial tax system, assessing a one-time transition tax on earnings of certain foreign subsidiaries that were previously tax deferred, and imposing new taxes on certain foreign-sourced earnings. The legislation is unclear in some respects and will require interpretations and implementing regulations by the Internal Revenue Service, as well as state tax authorities, and the legislation could be subject to amendments and technical corrections, any of which could lessen or increase certain adverse impacts of the legislation. A significant portion of our earnings are earned by our subsidiaries outside the U.S. Changes to the taxation of certain foreign earnings resulting from the newly enacted U.S. tax legislation, along with the state tax impact of these changes, may have an adverse effect on our effective tax rate. Furthermore, changes to the taxation of undistributed foreign earnings could change our future intentions regarding reinvestment of such earnings. The foregoing items could have a material effect on our business, cash flow, results of operations or financial condition.

In addition, we are subject to examinations of our income tax returns by domestic and foreign tax authorities. We regularly assess the likelihood of outcomes resulting from these examinations to determine the adequacy of our provision for income taxes and have reserved for potential adjustments that may result from the current examinations. There can be no assurance that the final determination of any of these examinations will not have an adverse effect on our effective tax rates, financial condition and results of operations.

Considerable amounts of shares of our common stock are available for issuance under our equity incentive plans, and significant issuances in the future may adversely impact the market price of our common stock.

As of June 30, 2018 we had 2.00 billion authorized common shares, of which 247.9 million shares were outstanding. In addition, 27.4 million shares of common stock were reserved for issuance pursuant to our equity incentive plans and Amended and Restated 1990 Employee Qualified Stock Purchase Plan (ESPP). The availability of substantial amounts of our common stock resulting from the exercise or settlement of equity awards outstanding under our equity incentive plans, which would be dilutive to existing stockholders, could adversely affect the prevailing market price of our common stock and could impair our ability to raise additional capital through the sale of equity securities.

We have indebtedness that could adversely affect our financial condition and prevent us from fulfilling our debt obligations.

The aggregate amount of our consolidated indebtedness as of June 30, 2018 was $1.75 billion (principal amount), which consists of $500.0 million in aggregate principal amount of our 2.125% Notes due 2019 (2019 Notes), $500.0 million in aggregate principal

Table of Contents

amount of our 3.000% Notes due 2021 (2021 Notes) and $750.0 million in aggregate principal amount of our 2.950% senior notes due 2024 (2024 Notes). We also may incur additional indebtedness in the future. Our indebtedness may:

- make it difficult for us to satisfy our financial obligations, including making scheduled principal and interest payments on the debentures and our other indebtedness;
- limit our ability to borrow additional funds for working capital, capital expenditures, acquisitions or other general corporate purposes;
- limit our ability to use our cash flow or obtain additional financing for future working capital, capital expenditures, acquisitions or other general business purposes;
- require us to use a portion of our cash flow from operations to make debt service payments;
- limit our flexibility to plan for, or react to, changes in our business and industry;
- place us at a competitive disadvantage compared to our less leveraged competitors; and
- increase our vulnerability to the impact of adverse economic and industry conditions;

Our ability to meet our debt service obligations will depend on our future performance, which will be subject to financial, business and other factors affecting our operations, many of which are beyond our control.

The agreements governing the 2019 Notes, 2021 Notes and 2024 Notes contain covenants that may adversely affect our ability to operate our business.

The indentures governing the 2019 Notes, 2021 Notes and 2024 Notes contain various covenants limiting our and our subsidiaries' ability to, among other things:

- create certain liens on principal property or the capital stock of certain subsidiaries;
- enter into certain sale and leaseback transactions with respect to principal property; and
- consolidate or merge with, or convey, transfer or lease all or substantially all our assets, taken as a whole, to, another person.

A failure to comply with these covenants and other provisions in these indentures could result in events of default under the indentures, which could permit acceleration of the 2019 Notes, the 2021 Notes and the 2024 Notes. Any required repayment as a result of such acceleration could have a material adverse effect on our business, results of operations, financial condition or cash flows.

Item 2. Unregistered Sale of Equity Securities and Use of Proceeds

On May 16, 2016, the Board authorized 2016 Repurchase Program to repurchase of up to $1.00 billion of shares of our common stock and debentures. The 2016 Repurchase Program has no stated expiration date. Through June 30, 2018, we have used $929.4 million of the $1.00 billion authorized under the 2016 Repurchase Program, leaving $70.6 million available for future purchases. On May 16, 2018, the Board authorized 2018 Repurchase Program to repurchase the Company's common stock and debentures up to $500.0 million.

The following table summarizes our repurchase of shares of our common stock during the first quarter of fiscal 2019:

(In thousands, except per share amounts) Period	Total Number of Shares Purchased	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Program	Approximate Dollar Value of Shares that May Yet Be Purchased

				Under the Program
April 1, 2018 to May 5, 2018	1,395	$ 65.77	1,395	$ 115,587
May 6, 2018 to June 2, 2018	224	$ 67.88	224	$ 100,411
June 3, 2018 to June 30, 2018	445	$ 67.04	445	$ 70,580
Total for the Quarter	2,064		2,064
