**CATALYST SEMICONDUCTOR, INC.
NOTES TO UNAUDITED CONDENSED CONSOLIDATED FINANCIAL STATEMENTS**

Note 1 Basis of Presentation:

In the opinion of the management of Catalyst Semiconductor, Inc. (Company), the unaudited condensed consolidated interim financial statements included herein have been prepared on the same basis as the April 30, 2002 audited consolidated financial statements and include all adjustments, consisting of only normal recurring adjustments, necessary to fairly state the information set forth herein. The consolidated statements include the accounts of the Company's wholly owned subsidiary, Nippon Catalyst KK, a sales organization in Japan. The statements have been prepared in accordance with the regulations of the Securities and Exchange Commission (SEC). For further information, refer to the consolidated financial statements and footnotes thereto included in the Company's Annual Report on Form 10-K for the year ended April 30, 2002. The results of operations for the three month period ended October 31, 2002 are not necessarily indicative of the results to be expected for the entire year ending April 30, 2003 or any other future period. Certain prior period balances have been reclassified to conform to the current period presentation.

The Company's business is highly cyclical and has been subject to significant downturns at various times which have been characterized by reduced product demand, production overcapacity and significant erosion of average selling prices. Throughout fiscal 1998 and 1999, the market for certain FLASH and EEPROM devices, which comprise the majority of Catalyst's business, experienced an excess market supply relative to demand which resulted in a significant downward trend in prices. During fiscal 2000, the semiconductor market rebounded from a cyclical decline which had a favorable impact on the Company's revenues and gross margins into fiscal 2001 through the quarter ended October 2000. However, during the one year period from November 2000 through October 2001, the market for the Company's products became more competitive as a result of the increased availability of products when demand was decreasing. During the two quarters from November 2001 through April 2002, unit volumes increased faster than prices declined, resulting in increased sales, margins and profitability. In the most recent quarter ended October 2002, the combined effects of decreased shipments with minimal change in prices resulted in revenues slightly decreased from the previous quarter. The Company could experience other such downward trends in product pricing or volume in the future which could further adversely affect its operating results.

The Company's fiscal year and its first, second and third fiscal quarters end on the Sunday closest to April 30, July 31, October 31 and January 31, respectively. For purposes of financial statement presentation, the year end date is expressed as April 30 and the quarter end dates are expressed as July 31, October 31 or January 31, respectively.

Comprehensive income is defined as the change in equity of a business enterprise during a period from transactions and other events and circumstances from non-owner sources. Through October 31, 2002, the Company has not had any items of comprehensive income other than net income.

In June 2002, the FASB issued SFAS No. 146, Accounting for Exit or Disposal Activities. SFAS No. 146 addresses significant issues regarding the recognition, measurement and reporting of costs that are associated with exit and disposal activities, including restructuring activities that are currently accounted for under EITF No. 94-3, Liability Recognition for Certain Employee Termination Benefits and Other Costs to Exit an Activity (Including Certain Costs Incurred in a Restructuring). The scope of SFAS No. 146 also includes costs related to terminating a contract that is not a capital lease and termination benefits that employees who are involuntarily terminated receive under the terms of a one-time benefit arrangement that is not an ongoing benefit arrangement or an individual deferred-compensation contract. SFAS No. 146 will be effective for exit or disposal activities that are initiated after December 31, 2002 and early adoption is encouraged. We will adopt SFAS No. 146 during the quarter ending January 31, 2003. The provisions of EITF No. 94-3 shall continue to apply for an exit activity initiated under an exit plan that met the criteria of EITF No. 94-3 prior to the adoption of SFAS No. 146. The effect of the adoption of SFAS No. 146 will change on a prospective basis the timing of when restructuring charges are recorded from a commitment date approach to the date the liability is incurred.

Note 2 Net Income (Loss) Per Share:

Basic net income (loss) per share is computed by dividing net income (loss) available to common stockholders (numerator) by the weighted average number of common shares outstanding (denominator) during the

Table of Contents

period and excludes the dilutive effect of stock options. Diluted net income (loss) per share gives effect to all dilutive potential common shares outstanding during a period. In computing diluted net income (loss) per share, the average stock price for the period is used in determining the number of shares assumed to be purchased from the exercise of stock options.

A reconciliation of the numerators and denominators of the basic and diluted income (loss) per share is presented below:

	Three Months Ended		Six Months Ended	
	October 31, 2002	October 31, 2001	October 31, 2002	October 31, 2001
Net income (loss)	\$ 843	\$ (977)	\$ 2,003	\$ (606)
Shares calculation:				
Weighted average shares outstanding basic	16,739	17,815	16,833	17,735
Effect of dilutive securities:				
Stock options	1,603		1,817	
Weighted average shares outstanding diluted	18,342	17,815	18,650	17,735
Net income (loss) per share:				
Basic	\$ 0.05	\$ (0.05)	\$ 0.12	\$ (0.03)
Diluted	\$ 0.05	\$ (0.05)	\$ 0.11	\$ (0.03)

Options to purchase 1,245,000 shares of common stock at prices from \$4.07 to \$9.50 per share outstanding during the quarter ended October 31, 2002 and options to purchase 6,186,000 shares of common stock at prices from \$0.11 to \$9.50 per share outstanding during the quarter ended October 31, 2001 were not included in the computation of diluted income (loss) per share because the inclusion of such options would have been antidilutive.

Options to purchase 1,245,000 shares of common stock at prices from \$4.07 to \$9.50 per share outstanding during the six months ended October 31, 2002 and options to purchase 6,186,000 shares of common stock at prices from \$0.11 to \$9.50 per share outstanding during the six months ended October 31, 2001 were not included in the computation of diluted income (loss) per share because the inclusion of such options would have been antidilutive.

Table of Contents**Note 3 Balance Sheet Components (in thousands):**

Other	1,637	1,481
	<u>\$ 3,487</u>	<u>\$ 2,367</u>

Note 4 1998 Special Equity Incentive Plan:

In December 1998, the Company adopted an additional stock option plan, entitled the 1998 Special Equity Incentive Plan (Special Option Plan), for incentive stock options and non-statutory stock options for certain directors, officers and consultants of the Company. A total of 3.5 million shares of Common Stock have been reserved for issuance under the Special Option Plan. Options granted under the Special Option Plan are for periods not to exceed ten years. Options generally vest over four year periods. During fiscal 1999, options totaling 3.0 million shares were granted under the plan at a price of \$0.125 per share when the market was at \$0.33 per share. As a result, an aggregate of \$483,000 of compensation expense will be recognized over the four year vesting period of the options, \$23,000 of which was recognized during the three month period ended October 31, 2002. An aggregate of \$473,000 of such expense has been recognized through October 31, 2002 and \$10,000 remains to be recognized in future periods.

Table of Contents

Note 5 Contingencies:

In 1989, the Company entered into a license agreement with Philips Export B.V. and U.S. Philips Corporation (Philips) to license technology relating to their I2C bus technology. The Company received a communication from Philips in May 2001 suggesting that royalties may be due and owing on past sales of certain products. The Company continues to investigate this communication.

In the normal course of business, the Company receives notification of threats of legal action in relation to claims of patent infringement by the Company. Although no assurances can be given to the results of these claims, management does not believe that any such results will have a material adverse impact on the Company's financial condition or results of operations.

Note 6 Related Party Transactions:

During the fourth quarter of fiscal 2000, the Company began taking delivery of wafers fabricated at X-fab Texas, Inc. (Xfab), a wholly owned subsidiary of Elex NV, a Belgian holding company that owns 24% of the outstanding shares of the Company as of December 6, 2002. Mr. Roland Duchâtelet, the Chairman and CEO of Elex NV, serves as a member of the Company's Board of Directors. The wafers provided by Xfab supplement the same designs fabricated at Oki Semiconductor in Japan, the Company's principal wafer fab since 1985. Other than the purchase orders currently open with Xfab, there is no purchasing agreement currently in place with Xfab. Each purchase order remains open until the wafers are delivered, generally within two months (or over a one year period in the case of one particular wafer design which calls for monthly deliveries at a set price for each wafer delivered). The prices of wafers purchased from Xfab are determined by periodic negotiations with the management of Xfab and compared to quotes obtained from other prospective wafer fabricators and pricing surveys published by various industry trade organizations. During the six months ended October 31, 2002, the Company's purchases from Xfab totaled \$886,000. As of October 31, 2002, the total amount owed Xfab was \$84,000.

The Company has had an informal arrangement since 1995 to obtain engineering services from Lxi Corporation, a California corporation (Lxi), a provider of engineering services through Essex com SRL (Essex), its wholly owned subsidiary in Romania. Two officers of the Company, Messrs. Voicu and Gay own approximately 3% and 1%, respectively, of Lxi. The Company anticipates that Messrs. Voicu and Gay will divest themselves of their holdings in Lxi in the near future. The number of full-time engineers the Company uses is dependent upon the scope and number of R&D projects in process at a given time. For example, during the month of October 2002, Essex employed the equivalent of approximately 12 engineers to perform services on behalf of Catalyst. These services relate to key development projects of the Company including development, design, layout and test program development services. The Company has taken steps to form a wholly owned subsidiary in Romania to perform these engineering design services on our behalf and anticipates discontinuing its use of the engineering services of Lxi in or around January 2003. During the six months ended October 31, 2002, the Company recorded \$430,000 of engineering fees from Lxi for engineering design services. As of October 31, 2002 the total amount owed to Lxi was \$75,000.

One director, Mr. Allan, also serves as a consultant to the Company through his consulting company, Allan Advisors, Inc. (AAI). Under the terms of the consulting agreement, AAI is paid consulting fees of \$8,333 per month. The consulting agreement will expire on August 14, 2003. Mr. Allan has stated his intention not to renew the Consulting Agreement upon its expiration.

Table of Contents

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

Forward-Looking Statements

The following discussion should be read in conjunction with the consolidated financial statements and notes thereto included in this quarterly report on Form 10-Q. In addition, in order to take advantage of the safe harbor provisions of the Private Securities Litigation Reform Act of 1995, we hereby notify our readers that the factors set forth in Certain Factors That May Affect Our Future Results as set forth below in this Item 2, as well as other factors, in the past have affected and in the future could affect our actual results and could cause our results for future periods to differ materially from those expressed in any forward looking statements made by us or on our behalf including, without limitation, those made in this report. All forward looking statements included in this report are based upon information available to us on the date of filing and we assume no obligation to update such forward-looking statements.

Overview

Catalyst Semiconductor, Inc., incorporated October 8, 1985, designs, develops and markets nonvolatile memory semiconductor products including Serial and Parallel EEPROMs, Flash memory and Mixed Signal devices. Revenues are derived from sales of semiconductor products designed by us and manufactured by other companies to our specifications.

Our business is highly cyclical and has been subject to significant downturns at various times which have been characterized by reduced product demand, production overcapacity and significant erosion of average selling prices. Throughout fiscal 1998 and fiscal 1999, the market for certain FLASH and EEPROM devices, which comprise the majority of our business, experienced an excess market supply relative to demand which resulted in a significant downward trend in prices. During fiscal 2000 and the first half of fiscal 2001, we reduced our manufacturing costs, increased the efficiency of our manufacturing operations and the selling prices for certain products that we produce increased, all contributing to increased gross margin percentages. During the second half of fiscal 2001, we experienced cancellations of orders by our customers, increased supplies of competitive products, decreased prices and decreasing revenues. Revenues, gross profits, selling prices and net income continued to decline through the second quarter of fiscal 2002. In the second half of fiscal 2002, quarterly revenues, gross profits and net income increased. However, in the first quarter of fiscal 2003, these increases appear to have ceased and in the second quarter of fiscal 2003, the revenues and gross profits have decreased due to greater competitive pressures on our products. We could experience future increases in our manufacturing costs, decreases in our unit shipments and further downward trends in our product pricing, all of which are factors that could adversely affect our operating results.

Results of Operations

Revenues. Total revenues consist of net product sales. A substantial portion of our net product sales are made through independent distributors. Revenue from product sales to original equipment manufacturers and from sales to distributors who have no, or limited, product return rights and no price protection rights, is recognized upon shipment net of allowances for estimated returns. When distributors have rights to return products or price protection rights, we defer revenue recognition until the distributor sells the product to the end customer. Total revenues increased \$2.8 million or 30% to \$12.0 million for the quarter ended October 31, 2002 from \$9.2 million for the quarter ended October 31, 2001. The increase is due to increased unit volumes shipped compared to the previous year. Total revenues decreased by \$0.5 million or 4% to \$12.0 million for the quarter ended October 31, 2002 from \$12.5 million for the quarter ended July 31, 2002. The decrease was primarily attributable to a decrease in the average selling price of the products shipped which was caused by deteriorating market conditions and an increase in sales of lower priced products. Total revenues increased \$4.8 million or 24% to \$24.5 million for the six months ended October 31, 2002 from \$19.7 million for the six months ended October 31, 2001. The increase was primarily attributable to an increase in the quantity of our products sold which was caused by improving market conditions. Shipments of our EEPROM devices increased \$4.5 million or 28% to \$20.7 million or 84% of revenues in the six months ended October 31, 2002 compared to \$16.2 million or 83% of revenues in the six months ended October 31, 2001. The increase was also attributable to the improved market conditions. Shipments of our Flash memory devices increased \$0.2 million or 6% to \$3.4 million or 14% of revenues in the six months ended October 31, 2002 compared to \$3.2 million or 16% of revenues in the six months ended October 31, 2001. The increase in Flash product sales was also attributable to the improved market conditions. Shipments of our mixed signal products increased \$0.1 million or 33% to \$0.4 million or 2% of revenues for the six months ended October 31,

Table of Contents

2002, compared to \$0.3 million or 1% of revenues in the six months ended October 31, 2001. The increase in mixed signal product shipments was due to the limited number of products available for sale in the previous year and the recent introduction of those products. International sales contributed 77% of net product sales in the six months ended October 31, 2002 as compared to 69% in the year ended April 30, 2002. The increase in percentage of international revenues in fiscal 2003 is primarily attributable to our increased sales in Japan and Europe due to increased market demand while demand in the US has weakened. All sales of our products are in US dollars, minimizing the effects of currency fluctuations.

Gross Profit. Gross profit increased \$2.3 million or 85% to \$5.0 million, or a gross margin of 41%, for the quarter ended October 31, 2002 compared to gross profit of \$2.7 million, or a gross margin of 29%, for the quarter ended October 31, 2001. The increase in gross profit was primarily attributable to increased revenues and lower costs due to our continuing cost control measures. The effect of changes in inventory reserves in both periods was not a significant factor. Gross profit decreased \$0.4 million or 7% to \$5.0 million, or a gross margin of 41%, for the quarter ended October 31, 2002 compared to a gross profit of \$5.4 million, or a gross margin of 44%, for the quarter ended July 31, 2002. The decrease in gross profit was primarily attributable to the decrease in selling prices for our products due to competitive pricing pressures and decreased unit volumes sold. Gross profit increased \$3.7 million or 55% to \$10.4 million, or a gross margin of 42%, for the six months ended October 31, 2002 compared to a gross profit of \$6.7 million, or a gross margin of 34%, for the six months ended October 31, 2001. The increase in gross profit was primarily attributable to increased unit sales and improved unit costs due to our continuing cost control measures. It is our policy to fully reserve all inventories that are not expected to be sold in a reasonable period of time following the balance sheet date, generally within the ensuing twelve months. We pay certain foreign manufacturing expenses in local currency, primarily Baht in Thailand and Yen in Japan. These expenses in foreign currencies are not material to us.

Research and Development. Research and development (R&D) expenses consist principally of salaries for engineering, technical and support personnel, contract engineering services, depreciation of equipment and the cost of wafers used to evaluate new products and new versions of current products. R&D expenses increased \$0.2 million or 20% to \$1.2 million or 10% of revenues for the quarter ended October 31, 2002 from \$1.0 million, or 11% of revenues, in the quarter ended October 31, 2001. The increase was primarily attributable to a \$0.2 million increase in personnel expense and related costs. R&D expenses decreased \$0.1 million or 8% to \$1.2 million or 10% of revenues for the quarter ended October 31, 2002 from \$1.3 million, or 10% of revenues, in the quarter ended July 31, 2002. The decrease was primarily attributable to a decrease in outside consulting expenses during the quarter. R&D expenses increased \$0.4 million or 19% of revenues to \$2.5 million for the six months ended October 31, 2002 from \$2.1 million or 10% of revenues for the six months ended October 31, 2001. The increase was primarily attributable to a \$0.3 million increase in personnel related expenses and a \$0.1 million increase in the costs of various outside providers of engineering services. As of October 31, 2002, we employed 25 people in research and development activities in addition to the equivalent of 12 more people through our informal arrangement with Lxi, compared to 18 employees plus 11 under the arrangement with Lxi as of October 31, 2001. See *Effects of Transactions with Related Parties* for additional information regarding our arrangement with Lxi.

Selling, General and Administrative. Selling, general and administrative (SG&A) expenses consist principally of salaries for sales, marketing and administrative personnel, commissions, promotional activities, professional fees and director and officer (D&O) insurance. SG&A expenses decreased \$0.4 million or 14% to \$2.5 million, or 21% of revenues, for the quarter ended October 31, 2002 from \$2.9 million, or 31% of revenues, for the quarter ended October 31, 2001. This decrease was primarily attributable to a \$0.2 million decrease in legal expenses and a \$0.2 million decrease in provisions for bad debt. SG&A expenses increased \$0.1 million or 4% to \$2.5 million, or 21% of revenues, for the quarter ended October 31, 2002 compared to \$2.4 million or 19% of revenues, for the quarter ended July 31, 2002. The increase was primarily attributable to an increase in promotional expenses. SG&A expenses decreased \$0.8 million or 14% to \$4.9 million, or 20% of revenues, for the six months ended October 31, 2002 from \$5.7 million, or 29% of revenues, for the six months ended October 31, 2001. This decrease was primarily attributable to a \$0.3 million decrease in personnel related expenses, a decrease of \$0.2 million in the provision for bad debts and a \$0.2 million decrease in commissions paid to outside representatives.

Net Interest Income and Expense. Net interest income decreased \$111,000 or 56% to \$88,000, or 1% of revenues, for the quarter ended October 31, 2002 compared to \$199,000, or 2% of revenues, in the quarter ended October 31, 2001. The decrease in net interest income was primarily attributable to the decreased interest rate paid on our cash balances. Net interest income decreased \$309,000 or 67% to \$154,000, or 1% of revenues, for the six months ended October 31, 2002 compared to \$463,000, or 2% of revenues, for the six months ended October 31, 2001. The decrease in net interest income was primarily attributable to the decreased interest rate paid on our cash balances.

Table of Contents

Income Tax Provision. The provision for income taxes was \$501,000, or 37% of earnings before taxes for the quarter ended October 31, 2002 compared to zero in the quarter ended October 31, 2001. There was no provision made for income taxes in the previous fiscal year due to the loss incurred. The provision for income taxes was \$1,196,000, or 37% of earnings before taxes, for the six months ended October 31, 2002 compared to \$49,000 for the six months ended October 31, 2001. The provision for income taxes for the quarter and six months ended October 31, 2002 differs from the statutory rate primarily due to increases for domestic state taxes and foreign taxes and a reduction due to R&D credits.

Critical Accounting Policies and Estimates

The preparation of consolidated financial statements in conformity with generally accepted accounting principles (GAAP) in the United States of America requires management to make estimates and judgments that affect the reported amounts of assets, liabilities, revenues and expenses, and related disclosures. On an on-going basis, we evaluate our estimates, including those related to product shipments and returns, bad debts, inventories, income taxes, warranty obligations, contingencies and litigation. We base these estimates on historical experience and on various other assumptions that are believed to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates under different assumptions or conditions.

Specifically, we believe that the following accounting policies and estimates are most important to the portrayal of our financial condition and results and require management's most difficult judgments:

Inventory Reserves.

We record inventory reserves for estimated unmarketable inventory equal to the cost of inventory estimated to be in excess based upon assumptions about future demand and market conditions. If actual market conditions are less favorable than those projected by management, inventory write-downs are also required. Inventory reserves are also taken based upon our estimate of the future selling prices of our inventories. Whenever the estimated future selling price is less than the value of and the estimated cost to sell any portion of our inventory, a reserve is taken for the amount by which the cost of the inventory plus the estimated costs to sell exceeds the estimated future selling price. If we overestimate the future selling prices, we will incur additional losses when the inventory is sold for a lower price or when we establish additional reserves to cover the further decreases in estimated sales price.

Revenue Recognition.

For products sold directly to end-users, or to distributors that do not receive price concessions and do not have rights of return, we recognize revenue upon shipment and title transfer if we believe collection is reasonably assured. Reserves for sales returns and allowances are estimated based primarily upon historical experience and provided at the time of shipment.

For sales to distributors with agreements allowing for price concessions or product returns, we recognize revenue at the time the distributor sells the product to its end customer. Revenue is not recognized upon shipment since, due to various forms of price concessions, the sales price is not substantially fixed or determinable at that time. Additionally, these distributors have contractual rights to return products, up to a specified amount, for a given period of time. Revenue is recognized when a distributor sells the product to an end-user, at which time the sales price becomes fixed.

On our sales to end-users, we record estimated reductions to revenue for the return of products at the time revenue is recognized. If market conditions were to weaken, we may face higher volumes of product returns, resulting in an incremental reduction of revenue at the time products are returned. If we were to experience an increased rate of product returns, our sales would be further reduced by the increased reserves taken to cover the increased amount of our products expected to be returned.

At the time of shipment to distributors, we record a trade receivable for the selling price since there is a legally enforceable right to payment, we relieve inventory for the carrying value of the goods shipped since legal title has passed to the distributor and we record the gross margin in deferred gross profit on shipments to distributors, a component of current liabilities on our balance sheet. Deferred margin represents the gross margin on the sale to the distributor; however, the amount of gross margin we recognize in future periods could be less than

Table of Contents

the deferred margin as a result of price concessions. We do not reduce deferred margin by estimated future price concessions; instead, price concessions are recorded when incurred, which is generally at the time the distributor sells the product to an end-user. The difference between deferred margin and the margin actually recognized has not been material in the past, however, since price concessions are highly dependent upon market conditions, there can be no assurance that the difference will not be material in the future. Price concessions are not granted for amounts in excess of the deferred margin.

Allowances for Doubtful Accounts.

We maintain allowances for doubtful accounts for estimated losses resulting from the inability of our customers to make required payments. If the financial condition of our customers were to deteriorate, resulting in an impairment of their ability to make payments, additional allowances may be required.

Valuation Allowances.

We record a full valuation allowance to reduce our deferred tax assets to the amount that is more likely than not to be realized. We have considered estimated future taxable income in assessing the need for the valuation allowance. In the event we are to determine that we would be able to realize our deferred tax assets in the future in excess of the net recorded amount, an adjustment to the deferred tax asset would increase income or stockholders' equity in the period such determination is made.

Liquidity and Capital Resources

Total cash increased \$1.7 million to \$28.0 million as of October 31, 2002 from \$26.3 million as of April 30, 2002. Net cash provided by operations was \$4.0 million for the six months ended October 31, 2002, which was due primarily to net income of \$2.0 million, adjusted for depreciation and amortization of \$501,000, a decrease in gross accounts receivable of \$1.2 million related to increased collections activity, increases in accrued expenses of \$1.3 million due to income tax provisions and an increase in other assets of \$234,000. Such increases were partially offset by an increase in gross inventories of \$136,000 and a decrease in accounts payable of \$982,000. Net cash provided by operations was \$503,000 for the six months ended October 31, 2001, which was due primarily to depreciation and amortization of \$525,000, an addition to a provision for doubtful accounts of \$200,000, a decrease in gross accounts receivable of \$2.3 million and a decrease in other assets of \$303,000. Such increases were partially offset by a net loss of \$606,000, a reduction in the provision for excess and obsolete inventory of \$63,000, an increase in gross inventories of \$515,000, principally caused by our increased wafer purchases, a decrease in accounts payable of \$237,000, a decrease in accrued expenses of \$760,000 and a \$610,000 decrease in the deferred gross profits from sales to distributors.

Our investing activities used \$852,000 during the six months ended October 31, 2002 which were related primarily to the acquisition of equipment for our manufacturing operations and purchases of software to support our development activities. Cash used in investing activities for the six months ended October 31, 2001 was \$415,000 which was primarily related to the purchase of equipment for our manufacturing operations.

Financing activities used \$1.4 million during the six months ended October 31, 2002, consisting primarily of \$1.6 million utilized for the repurchase of an aggregate of 622,900 shares of our common stock for an average price per share of \$2.58 on the open market through our announced open market repurchase program. Net cash provided by the sale of common stock through the exercise of stock options totaled \$195,000 during the six months ended October 31, 2002. During the six months ended October 31, 2001, the cash utilized by financing activities was \$2.3 million, consisting primarily of the \$2.0 million used to pay off our outstanding bank obligation relating to our line of credit which we cancelled on June 30, 2001, \$262,000 utilized for the repurchase of an aggregate of 130,000 shares of our common stock, and \$43,000 for payments of capitalized leases. Net cash provided by the sale of common stock through the exercise of stock options totaled \$40,000 during the six months ended October 31, 2001.

As of October 31, 2002, we were indebted to various creditors in the amount of approximately \$4.0 million. This amount is comprised of approximately \$3.3 million for wafers and inventory processing and approximately \$0.7 million for other goods and services.

We do not have any material contractual obligations or commercial commitments to make any future payments other than with respect to the facilities lease for our principal business office in Sunnyvale which will expire in 2006. Further, we do not engage in any off-balance sheet arrangements or transactions. The following table shows the aggregate future minimum lease payments, by fiscal year, that we are obligated to pay under the

Table of Contents

terms of the non-cancelable operating leases we currently have for our various facilities, principally our headquarters building in Sunnyvale, California (in thousands):

Years ending April 30,	Operating Leases
2003	\$ 566
2004	561
2005	574
2006	550
2007	120
	<hr/> \$2,371 <hr/>

In light of the current economic and competitive climate, we continue to monitor our liquidity resources. We believe our existing cash and cash equivalents and anticipated cash flows from our operating activities will be sufficient to fund our working capital and capital expenditure needs for at least the next 12 months. In our competitive industry, we must constantly consider the need to make significant expenditures in connection with our research and development efforts. We may use cash to invest in businesses, products and/or technologies which we believe to be strategic. However, we have no present commitments or obligations with respect to any acquisition of other businesses or technology. Following our cancellation of our line of credit in June 2001, we have not established a borrowing relationship with any lending institution, although we do not anticipate any difficulty in doing so should the need arise. We have no present intention to seek additional debt or equity financing, but our need to do so is highly dependent upon factors such as the demand for our products and changes in industry and general economic conditions. In the event that we do determine to seek such financing, there can be no assurance that such financing will be available on acceptable terms, if at all, and any additional equity financing could result in incremental dilution to our existing investors.

Effects of Transactions with Related Parties

During the fourth quarter of fiscal 2000, we began taking delivery of wafers fabricated at X-fab Texas, Inc. (Xfab), a wholly owned subsidiary of Elex NV, a Belgian holding company that owns 24% of the outstanding shares of Catalyst. Mr. Roland Duchâtelet, the Chairman and CEO of Elex NV, serves as a member of our Board of Directors. The wafers provided by Xfab supplement the same designs fabricated at Oki Semiconductor in Japan, our principal wafer fab since 1985. Other than purchase orders currently open with Xfab, there is no purchasing agreement in place with Xfab. Each purchase order remains open until the wafers are delivered, which is generally within two months of placement of the order although, in the case of one particular wafer design, the purchase order calls for monthly deliveries over a one year period at a set price for each wafer delivered. The prices of wafers purchased from Xfab are determined by periodic negotiations with the management of Xfab and compared to quotes obtained from other prospective wafer fabricators and pricing surveys published by various industry trade organizations. During the six months ended October 31, 2002, our purchases from Xfab totaled \$886,000. As of October 31, 2002, the total amount owed Xfab was \$84,000.

We have had an informal arrangement since 1995 to obtain engineering services from Lxi Corporation, a California corporation (Lxi), a provider of engineering services through Essex com SRL (Essex), its wholly owned subsidiary in Romania. Our officers, Messrs. Voicu and Gay, own approximately 3% and 1%, respectively, of Lxi. We anticipate that Messrs. Voicu and Gay will divest themselves of their holdings in Lxi in the near future. During the month of October 2002, Essex employed the equivalent of approximately 12 full-time engineers to perform the services on our behalf. These services relate to key development projects of Catalyst including development, design, layout and test program development services. We anticipate continuing to use the engineering services of Lxi for the near term, but given the fact that we do not have any contractual commitment to obtain these services from Lxi, nor does Lxi have any obligation to provide these services to Catalyst, we cannot be assured of the availability of these services. As a result of these and other circumstances, we have recently taken steps to form a wholly owned subsidiary in Romania to perform these engineering design services on our behalf and anticipate discontinuing our use of the engineering services of Lxi in or around January 2003. During the six months ended October 31, 2002, we recorded \$430,000 of engineering fees from Lxi for engineering design services. As of October 31, 2002 the total amount owed to Lxi was \$75,000.

One of our directors, Mr. Lionel Allan, also serves as a consultant to us through his consulting company, Allan Advisors, Inc. Under the terms of his consulting agreement, we pay consulting fees of \$8,333 per month. The consulting agreement will expire on August 14, 2003. Mr. Allan has stated his intention not to renew the consulting agreement upon its expiration.

Table of Contents

Recent Accounting Pronouncements

In June 2002, the FASB issued SFAS No. 146, Accounting for Exit or Disposal Activities. SFAS No. 146 addresses significant issues regarding the recognition, measurement and reporting of costs that are associated with exit and disposal activities, including restructuring activities that are currently accounted for under EITF No. 94-3, Liability Recognition for Certain Employee Termination Benefits and Other Costs to Exit an Activity (Including Certain Costs Incurred in a Restructuring). The scope of SFAS No. 146 also includes costs related to terminating a contract that is not a capital lease and termination benefits that employees who are involuntarily terminated receive under the terms of a one-time benefit arrangement that is not an ongoing benefit arrangement or an individual deferred-compensation contract. SFAS No. 146 will be effective for exit or disposal activities that are initiated after December 31, 2002 and early adoption is encouraged. We will adopt SFAS No. 146 during the quarter ending January 31, 2003. The provisions of EITF No. 94-3 shall continue to apply for an exit activity initiated under an exit plan that met the criteria of EITF No. 94-3 prior to the adoption of SFAS No. 146. The effect of the adoption of SFAS No. 146 will change on a prospective basis the timing of when restructuring charges are recorded from a commitment date approach to the date the liability is incurred.

Certain Risks that May Affect Our Future Results

We desire to take advantage of certain provisions of the Private Securities Litigation Reform Act of 1995, enacted in December 1995 (the Reform Act) that provides a safe harbor for forward-looking statements made by or on our behalf. We hereby caution stockholders, prospective investors in Catalyst and other readers that the following important factors, among others, in some cases have affected and in the future could affect, our stock price or cause our actual results for the quarter ending January 31, 2003 or the fiscal year ending April 30, 2003 and future fiscal years and quarters to differ materially from those expressed in any forward-looking statements, oral or written, made by us or on our behalf.

Our quarterly operating results may fluctuate due to many factors and are difficult to forecast.

Our operating results have historically been and in future quarters may be adversely affected or otherwise fluctuate due to factors such as:

fluctuations in customer demand for our products;

volatility in supply and demand affecting market prices generally;

the need to establish additional inventory reserves due to the expected selling prices falling below the amounts paid to produce and sell certain parts, or if our expectations for sales of our inventory fall below the quantities that we have on hand;

charges to bad debt expense caused by accounts receivable that become unlikely to be collected in a reasonable amount of time, if ever;

the timing of new product introductions and significant orders of our products;

increased expenses associated with new product introductions, process changes and/or expanding our sales channels;

gains or losses of significant customers;

fluctuations in manufacturing yields;

changes in our product mix;

increases in wafer prices due to increased market demand and other factors;

prices charged by our suppliers due to increased costs, decreased competition and other factors;

foreign currency fluctuations; and

general economic conditions.

We anticipate that a significant portion of our revenue may be derived from a limited number of large orders and we expect that the timing of receipt and fulfillment of these orders may cause fluctuations which could be material to our operating results, particularly on a quarterly basis.

Table of Contents

Our quarterly revenue and operating results are difficult to forecast due to the previously described factors. We base our expense levels, in significant part, on our expectations as to future revenue and our expenses are therefore relatively fixed in the short term. If our expected revenue levels fall below our forecasts, as has occurred during the most recent fiscal year, net income is likely to be disproportionately adversely affected because a proportionately smaller amount of our expenses vary with our revenue.

The semiconductor industry is highly cyclical in nature.

We operate in a highly cyclical industry that has been subject to significant economic downturns often in connection with, or in anticipation of, maturing product cycles and declines in general economic conditions. This type of downturn occurred in calendar years 1997 and 1998 and again during 2001. We currently face, and in the future may face, diminished product demand, accelerated erosion of average selling prices and gross margins and production overcapacity during such downturns, which may last for more than a year. Accordingly, we may experience substantial period to period fluctuations in future operating results due to general semiconductor industry conditions, overall economic conditions or other factors.

For example, we experienced accelerated erosion of average selling prices caused by adverse industry-wide conditions during fiscal 1998 and throughout calendar year 1999 and incurred substantial losses during that period. During fiscal 2000, the semiconductor market rebounded from its cyclical decline which had a favorable impact on both our revenues and our gross margins into fiscal 2001 through the quarter ended October 2000. During each of the fiscal quarters ended January 2001, April 2001, July 2001 and October 2001, however, the market for our products became more competitive as a result of increased availability of products when demand was decreasing. Since the one year period ended October 2001, we have seen increased quarterly revenues but the rate of revenue growth that we have experienced may not be sustained and could be reversed. For example, during the quarter ended October 31, 2002, our average selling prices trended slightly upward, while our unit sales volume decreased. Thus we are concerned about the ability of continued price and other competitive pressures to adversely affect our future operating results similar to the adverse affects on our 1998 and 1999 operating results.

Our continued success depends in large part on the continued growth of various electronics industries that use semiconductors. The improved market conditions we experienced in calendar year 1999 and the first ten months of calendar year 2000 have deteriorated significantly. During the latter half of the fiscal year ended April 30, 2001 and in the first half of fiscal 2002, we experienced decreases in orders from customers and found that lower selling prices were necessary to remain competitive in the market. We attempt to identify changes in market conditions as soon as possible; however, market dynamics make our prediction of and timely reaction to such events difficult. Our business could be harmed in the future by additional cyclical downturns in the semiconductor industry or by slower growth by any of the markets served by our customers products.

General economic conditions may reduce our revenues and harm our business.

We are subject to the risks arising from adverse changes in domestic and global economic conditions, including the possible disruption in commercial activities occasioned by terrorist activity and armed conflict. Because of the current worldwide economic slowdown and, in the United States in particular, many industries are delaying or reducing technology purchases. The impact of this slowdown on us is difficult to predict, but it may result in reductions in purchases of our products by our customers, longer sales cycles and increased price competition. As a result, if the current economic slowdown continues or worsens, we may fall short of our revenue expectations for any given quarter in fiscal 2003 or for the entire year. These conditions would negatively affect our business, financial condition and results of operations.

If our products fail to keep pace with the rapid technological changes in the semiconductor industry, we could lose customers and revenue.

Our product markets are characterized by rapidly changing technology and product obsolescence. A key factor to our business success is the timely introduction of new products at competitive price and performance levels. In particular, our future success will depend on our ability to develop and implement new design and process technologies which enable us to achieve higher product densities and thereby reduce product costs. For example, most of our products are currently designed and manufactured using a 0.8 micron CMOS EEPROM process or a 0.6 micron Flash memory process. We may not be able to select and develop new products and technologies and introduce them to the market in a timely manner and with acceptable fabrication yields and production costs. Furthermore, our products may not achieve market acceptance. Our failure to complete and introduce new products

Table of Contents

at competitive price/performance levels could materially and adversely affect our business, financial condition and operating results. Our business, financial condition and results of operations could be materially adversely affected by delays in developing new products, achievement of volume production of new products, successful completion of technology transitions with acceptable yields and reliability, or the lack of commercial acceptance of new products we introduce to the market.

We depend on a small number of suppliers for the supply of wafers.

We do not manufacture the semiconductor wafers used for our products. Oki Electric Industry, Co., Ltd. (Oki) in Japan has supplied wafers to us since 1987 and was our sole foundry source until the quarter and fiscal year ended April 30, 2000. At that time, an additional foundry, Xfab, began to provide a limited number of products to us and the volumes currently provided by Xfab are considerably less than Oki currently provides. We do not presently have a wafer supply agreement with Oki or Xfab and instead purchase wafers on a purchase order and acceptance basis. Our almost exclusive reliance on these independent foundries involves a number of risks, including:

- the risk of inadequate wafer supplies to meet our production needs;
- increased prices charged by such independent foundries;
- the unavailability of or interruption in access to required or more cost effective process technologies;
- reduced control over delivery schedules, manufacturing yields and costs; and
- the risks associated with international operations more fully described below.

We are not always able to obtain sufficient increased quantities of wafers from Oki to fulfill some of the current customer demand. Although we have a wafer purchase agreement with United Microelectronics Corp. (UMC) for certain Flash products which runs through February 2006, due to declining Flash bookings and other circumstances, we have not ordered any wafers from UMC since December 1997.

On September 6, 2000, we announced an agreement with Oki that resulted in a significant increase in foundry capacity available to us for a one year period that commenced in September 2000 in return for two payments totaling \$10.0 million. These payments were added to the cost of inventories purchased during the ten month period ended March 2001 and were reflected in our cost of sales as the associated inventory was sold. The last of the inventories associated with the payment for additional foundry capacity was sold in the quarter ended October 2001. As market conditions deteriorated before that inventory was sold, we were expensing a portion of such payments during a period in which the selling price of that product decreased, adversely affecting our gross margins.

To address our wafer supply concerns, we plan to continue working on expanding our primary foundry capability at Oki and our secondary foundry capability with Xfab at its facility in Lubbock, Texas. Xfab is owned by Elex NV, which is a 24% stockholder of Catalyst as of December 6, 2002, and Mr. Roland Duchâtelet, the chairman and CEO of Elex NV, serves as a member of our Board of Directors. The addition of Xfab as a second foundry source has enabled us to somewhat reduce the risks associated with the sourcing and quantity of our wafer supply and thereby improve control over an important component of our business; however, sufficient capacity may not be available from Xfab. Additionally, Oki may not continue to provide sufficient capacity in the future and that capacity may not be available from another manufacturer at prices acceptable to us. Even if such capacity is available from another manufacturer, the qualification process and time required to make the foundry fully operational for us could take many months or longer and be subject to other factors described below and the prices could be materially higher. Our business, financial condition and results of operations could be materially adversely affected by:

- the loss of Oki or Xfab as a supplier;
- our inability to obtain additional capacity at Oki or Xfab;
- our inability to qualify Xfab for additional products;
- our ability to qualify other wafer manufacturers for desired foundry capacity; or
- any other circumstances causing a significant interruption in our supply of semiconductor wafers.

Table of Contents

We have a history of incurring significant losses or experiencing significant negative cash flow from operations and we may not be able to maintain recent profitability.

We have incurred significant losses or experienced significant negative cash flow from operations during several prior fiscal years. In the most recent example, the negative cash flow we experienced from operations that occurred during fiscal 1998 and 1999 significantly reduced our available capital in those years. During fiscal 1999, we successfully took steps to address and resolve issues relating to our poor cash flow position and have maintained an improved cash position through October 31, 2002. During the fiscal year ended April 30, 2002, our cash on hand decreased by \$4.2 million, principally due to an aggregate of \$5.1 million in repurchases of our common stock pursuant to our open market repurchase program and our block repurchase from Elex in April 2002. Although, as of October 31, 2002, we had cash on hand of \$28.0 million, we may not continue to generate sufficient revenue and profits to fund our operations. We have pursued many measures designed to reduce expenses and conserve our cash in prior periods when we experienced decreased or negative cash flow and we continue to monitor expenses and to conserve our available cash. However, to the extent we suffer any adverse effects to our revenues or margins because of delays in new product introductions, price competition or other competitive factors, our cash position and our business, operating results and financial condition will be adversely affected.

We may need to seek additional equity or debt financing to address our working capital needs and to provide funding for capital expenditures, although we have no present intention to do so. If required, additional funding may not be available at acceptable terms, if at all. If we are successful in raising additional funds through the issuance of equity securities, our existing stockholders could experience significant dilution or the securities may have rights, preferences or privileges senior to those of our common stock. If adequate funds are not available to us or are not available on acceptable terms, further reductions in our operating expenses and capital expenditures may be required to continue operations, either of which could have a material adverse effect on our business, operating results and financial condition.

The trading price of our common stock could be subject to wide fluctuations in response to a variety of factors.

Our stock price has been and may continue to be subject to significant volatility. Any shortfall in revenues or earnings from levels expected or projected by investors or others could have an immediate and significant adverse effect on the trading price of our common stock in any given period. In addition, the stock market in general has experienced extreme price and volume fluctuations, affecting the market prices for many high technology companies and small capitalization companies and these fluctuations have often been unrelated to the operating performance of the specific companies. These broad fluctuations may adversely affect the market price for our common stock.

The manufacture of semiconductor wafers is highly complex and sensitive to a wide variety of factors that may adversely affect our ability to generate future revenues.

The manufacture of semiconductor wafers for our products is highly complex and sensitive to a wide variety of factors typical in the semiconductor industry such as:

- lower than anticipated production yields experienced by outside wafer foundries from time to time;
- incurring the time and expense to develop alternative foundry sources;
- experiencing substandard yield during the initial developmental stages of a new process;
- inability to receive sufficient quantities of wafers at favorable prices on a timely basis, especially in periods of increased demand;
- material disruptions in the supply of wafers as a result of low manufacturing yield or other manufacturing problems; and
- production transition delays.

Our ability to generate future revenues may be adversely affected by such delays and reductions that result in the cancellation of customer orders. Thus, any of the following events could delay shipments, result in the loss of customers and have a material adverse effect on our business and operating results:

- the loss of Oki or Xfab as a supplier;
- the failure to further develop Xfab as a reliable foundry in an expeditious and cost-effective manner;
- any prolonged inability to obtain adequate yields or deliveries from Oki or Xfab; and

Table of Contents

any other circumstance that would require us to seek and qualify alternative sources of supply of such products. Although we are exploring and seeking to develop alternative wafer supply sources to Oki such as Xfab, we may not be able to obtain such alternative sources nor may we have adequate facilities available. Failure to have such alternative sources available would have a material adverse effect on our business, financial condition and results of operations.

Intense competition in our markets may lead to reduced average selling prices of our products, reduced sales of our products and reduced gross margins.

The semiconductor industry is intensely competitive and has been characterized by rapid price erosion, declining gross margins, rapid technological change, product obsolescence and heightened international competition in many markets. Average selling prices in the semiconductor industry generally and, for our products in particular, have decreased significantly and rapidly over the life of each product. We expect that average selling prices for our existing products will decline rapidly in the future and that average selling prices for each new product will decline significantly over the life of the product. Declines in average selling prices for our products, if not offset by reductions in the cost of producing those products or by sales of new products with higher gross margins, would decrease our overall gross margins, could cause a negative adjustment to the valuation of our inventories and could materially and adversely affect our operating results.

We compete with major domestic and international semiconductor companies, most of which have substantially greater financial, technical, sales, marketing, production, distribution and other resources. We may not be able to compete successfully in the future. Our more mature products, such as Serial and Parallel EEPROM devices, compete on the basis of product performance, price and customer service. We believe that we compete successfully with respect to each of these factors; however price competition is significant and expected to continue. Principal competitors with respect to our EEPROM products currently include STMicroelectronics, Atmel, Microchip, Fairchild Semiconductor and Xicor, most of which have substantially greater resources than us.

The market for Flash memory products has been characterized by long production cycles, irregular yields, competing technologies and, particularly since the first quarter of fiscal 1997, intense price competition resulting in major reductions in average selling prices and corresponding reductions in margins. Our Flash memory products compete on the basis of product performance, price and customer service. However, given the development of higher density/lower cost products and the intense price competition prevalent for these products, we may not be able to compete successfully in the future against our competitors on the bases of these or other competitive factors.

We periodically experience an oversupply or shortage of wafer fabrication capacity due to volatile demand and thus we risk forecasting incorrectly and producing excess or insufficient inventories of particular products, which may adversely affect our results.

We have previously experienced periodic oversupply or shortages of wafer fabrication capacity due to the cyclical nature of the semiconductor industry. Since we must order products and build inventory substantially in advance of product shipments, we risk forecasting incorrectly and producing excess or insufficient inventories of particular products. Demand for our products is volatile and customers often place orders with short lead times. The ability of our customers to reschedule or cancel orders without significant penalty could adversely affect our liquidity, as we may be unable to adjust our purchases from our wafer suppliers to match any customer changes and cancellations. Our inventory may not be reduced by the fulfillment of customer expected orders and in the future we may produce excess quantities of our products. To the extent we produce excess inventories of particular products, our operating results could be adversely affected by charges to income that we would be required to recognize due to significant reductions in demand for our products or rapid declines in the market value of inventory, resulting in inventory writedowns or other related factors.

For example, during the last half of fiscal 1998, we recorded charges of approximately \$7.5 million due to the rapid decrease in demand for and the selling prices of our products. Such adjustments amounted to less than \$0.5 million in fiscal 1999 and were not material in fiscal 2000. Inventory reserve adjustments in fiscal 2001 totaled \$4.7 million which were partially offset by the release of \$2.0 million of inventory reserves taken in previous periods relating to products that were sold during fiscal 2001. During fiscal 2002 and through the first half of fiscal 2003, the net effect of inventory reserve adjustments was minimal.

Table of Contents

In addition, in fiscal 1998 and to some extent during fiscal 2001 and fiscal 2002, our ability to forecast future demand and selling prices diminished. It is our policy to fully reserve all inventories that we do not expect to be sold in a reasonable period of time from the balance sheet date, generally within the ensuing twelve months. During most of our recent fiscal periods, as a result of reductions in estimated demand for our various products, we have provided additional reserves for excess quantities and obsolescence for certain products, primarily our Flash and EEPROM products. In fiscal 1998, the rapid erosion of selling prices also left us with significant amounts of inventory with a carrying value that exceeded its current selling price resulting in adjustments to the carrying value of the inventory to the lower of cost or market value. We may suffer similar reductions in values of our inventories in the future and we may be unable to liquidate our inventory at acceptable prices.

We rely on outside providers of engineering services and the loss of these services or our failure to successfully transition the provision of such services to our newly established, wholly owned subsidiary may cause a significant interruption in our supply of engineering resources.

To supplement our limited engineering staff dedicated to product research and development activities, we utilize the services of various outside semiconductor design services. The most significant is an informal arrangement we have had in place since 1995 to obtain engineering services from Lxi Corporation (Lxi) of which our officers Messrs. Voicu and Gay own approximately 3% and 1%, respectively. Lxi provides these services through Essex com SRL (Essex), its wholly owned subsidiary in Romania. The aggregate number of hours of engineering services provided to us varies by quarter. During the month of October 2002, Essex employed the equivalent of approximately 12 full-time engineers to perform services relating to key development projects including development, design, layout and test program development services. Because we do not have a formal contractual arrangement with Lxi, Lxi is not obligated to continue to perform these services. In light of this fact, we have taken steps to establish a wholly owned subsidiary in Romania to provide an increased level of engineering services more efficiently and at a lower cost. That subsidiary has leased a facility suitable for up to 60 employees. We expect this process to be completed in January 2003, at which time we will discontinue completely the current arrangement under which Lxi provides engineering services. Our business, financial condition and results of operations could be materially adversely affected if the planned transition of engineering services to our subsidiary from Lxi is not completed substantially as planned.

We may not be able to sustain market acceptance for our Flash memory products.

A significant amount of our net revenues have been and continue to be derived from sales of Flash memory products. Flash memory products represented 14% of our shipments during the six months ended October 31, 2002 and represented 16%, 17% and 18% of our shipments, respectively, in each of fiscal years 2002, 2001 and 2000. The market for Flash memory products has been characterized by intense price competition, long production cycles, inconsistent yields, competing technologies, rapidly declining average selling prices, declines in gross margins and intense overall competition. Our operating results in fiscal 1999 and 1998 were adversely affected by intense price competition caused by increased supplies of competing products and other adverse industry-wide conditions. Intel and other competitors (which include Advanced Micro Devices, Atmel, Fujitsu, Hitachi, Micron, Mitsubishi, STMicroelectronics, Sharp, Texas Instruments and Toshiba) are expected to further increase Flash memory production. Most of these competitors are manufacturing and selling devices with larger memories which are utilized in more recently developed products such as digital cameras. Due to intense competition, limited development resources and other factors, we have decided not to develop any of the higher density Flash memory devices at this time. We may not be able to sustain the market acceptance for our Flash memory products. We anticipate continued price and other competitive pressures, which adversely affected our fiscal 1998 and 1999 operating results, to adversely affect our future operating results.

We rely on third-party subcontractors to sort, assemble, test and ship our products to customers.

We outsource portions of our planning, finish work and test functions for certain products, as well as our inventory management (shipping and receiving) function to subcontractors who are primarily located in Thailand and The Philippines. This reliance on third parties subjects us to risks such as reduced control over delivery schedules and quality, a potential lack of adequate capacity during periods when demand is high and potential increases in product costs due to factors outside our control such as capacity shortages and currency risks. Such risks could lead to delays in product deliveries, lost sales and increased costs which could harm our customer relationships and result in lower profitability.

Table of Contents

International sales comprise a significant portion of our product sales, which exposes us to foreign political and economic risks.

For the six months ended October 31, 2002, international sales comprised 77% of our product sales. Additionally, for fiscal 2002, 2001 and 2000, international sales accounted for approximately 69%, 60% and 61%, respectively, of our product sales. We expect that international sales will continue to represent a significant portion of our product sales in the future. However, our international operations may be adversely affected by the following factors:

greater fluctuations in demand for our products due to the increased sensitivity to pricing changes in certain markets, particularly the Far East;

fluctuations in exchange rates;

imposition of government controls;

political and financial instability;

trade restrictions;

changes in regulatory requirements;

difficulties in staffing international operations; and

longer payment cycles.

Currently, all our sales are invoiced and paid in U.S. Dollars, reducing our direct exposure to currency fluctuations. Recently, several customers in Europe have requested that we develop the ability to invoice them in Euros. Except for Yoshikawa Semiconductor in Japan, a provider of wafer sorting services and certain contract personnel costs and incidental manufacturing supply purchases in Thailand, over 98% of our purchases are in U.S. Dollars, minimizing any direct currency fluctuation risk. Our business however, is subject to other risks generally associated with doing business with foreign subcontractors including, but not limited to foreign government regulations and political and financial unrest which may cause disruptions or delays in shipments to our customers or access to our inventories. Our business, financial condition and results of operations may be materially adversely affected by these or other factors related to our international operations.

A relatively small number of customers have accounted for a significant portion of our net revenue in the past and the loss of one or more of our current customers, additional volume pricing arrangements or an early termination or delay in shipments can affect our results adversely.

A relatively small number of customers have accounted for a significant portion of our net revenue in the past. For the six months ended October 31, 2002, no single customer represented 10% or more of our sales. For the fiscal year ended April 30, 2002, sales to Future Electronics, Inc., a worldwide distributor, represented 11% of our revenues. For the fiscal year ended April 30, 2001, sales to Future Electronics, Inc. represented 14% of our revenues. For the fiscal year ended April 30, 2000, sales to Memec (Asia Pacific) Ltd., a distributor in Asia, Future Electronics, Inc. and Yosun Industrial Corp., a reseller located in Taiwan, each represented more than 10% of our revenues (13%, 12% and 11% respectively).

In addition, we have experienced and may continue to experience lower margins on sales to significant customers as a result of volume pricing arrangements. We also do not typically enter into long term contracts with our customers and we cannot be certain as to future order levels from our customers. When we do enter into a long term contract, the contract is generally terminable at the convenience of the customer and it may be difficult to replace that revenue source in the short term upon cancellation.

Our business, operating results and financial condition could be materially adversely affected by the loss of one or more of our current customers, additional volume pricing arrangements, an early termination or delay in shipments by one of our major customers.

We have been unable to fulfill all our customers' orders according to the schedule originally requested due to the constraints in our wafer supply.

Table of Contents

Due to constraints in our wafer supply, from time to time we have been unable to fulfill all our customers' orders according to the schedule originally requested. Although we strive to increase our supply of wafers and communicate to our customers the scheduled delivery dates that we believe that we can reasonably expect to meet, our customers may not accept the alternative delivery date or may seek to cancel their outstanding orders. This would result in lower revenues and profits, excess inventories and increased inventory reserves. Our operating results have historically been and in future quarters may be adversely affected or otherwise fluctuate due to factors such as timing of new product introductions and announcements by us and our competitors, fluctuations in customer demand for our products, volatility in supply and demand affecting market prices generally (such as the increases in supply of competitive products and significant declines in average selling prices experienced by us in recent fiscal years).

We rely upon our intellectual property and proprietary technology and may receive notices from time to time that allege we have infringed the intellectual property rights of others.

In the semiconductor industry, companies place extensive reliance upon their intellectual property and proprietary technology and it is typical for companies to receive notices from time to time that allege infringement of patents or other intellectual property rights of others. For example, in April 2001, we were served with a complaint alleging that we were infringing the intellectual property rights of Xicor, Inc., a maker of nonvolatile memory products. We entered into a settlement agreement with Xicor in June 2002 pursuant to which we have received a license to manufacture the disputed products in exchange for certain royalty payments to Xicor in connection with shipments of certain of our digital potentiometer products made subsequent to July 22, 2002, the date on which the complaint was dismissed. We may receive other notices and/or become a party to proceedings alleging our infringement of intellectual property rights in the future. Such claims, if successful, could require us to pay royalties on previous sales of the products which are alleged to infringe. Additionally, in such event, we may not be able to obtain any required licenses of third party intellectual property rights or be able to obtain such licenses on commercially reasonable terms. Failure to obtain such a license in any event could require us to cease production of our products until we develop a non-infringing design or process. Our business, financial condition and results of operations could be materially adversely affected by the cost of litigation of any such claim or resulting damage award.

Our securities are traded in a limited market.

Our common stock was traded on the Nasdaq National Market from May 1993 until it was delisted in August 1998 for sustained trading below the minimum level of \$1.00 per share required by the Nasdaq stock exchange for continued listing. Our stock was traded on the Over-The-Counter Bulletin Board market until September 6, 2000 when we were re-listed on the Nasdaq SmallCap Market. The over-the-counter market was generally less visible to investors and therefore we were unable to meet the liquidity requirements of some major commercial, institutional and private investors thus limiting the market for our securities. We intend to reapply for Nasdaq National Market listing if and when our shares trade for an extended period above the \$5.00 level which is required to qualify for National Market listing, but we are unable to ascertain the amount of time Nasdaq will take to consider such application, if Nasdaq will reply favorably to such application or, if additional information is requested, how much time and effort will be required on our part to adequately demonstrate and verify our qualifications.

Our backlog may not result in future revenue, which may adversely affect our business.

Due to possible customer changes in delivery schedules and cancellations of orders, our backlog at any particular date is not necessarily indicative of actual sales for any succeeding period. A reduction of backlog during any particular period or the failure of our backlog to result in future revenue could harm our business.

Our ability to operate successfully depends upon the continued service of certain key employees and the continued ability to attract and retain additional highly qualified personnel.

Our ability to operate successfully depends, to a large extent, upon the continued service of certain key employees and the continued ability to attract and retain additional highly qualified personnel. Competition for such personnel, particularly for highly skilled design, process and test engineers, is intense and we may not be able to retain such personnel or attract other highly qualified personnel. Our business, financial condition and results of operations could be materially adversely affected by the loss of or failure to attract and retain any such highly qualified personnel.

Table of Contents

We must effectively manage and support our planned growth in order for our business strategy to succeed.

We will need to continue to grow in all areas of operation and successfully integrate and support our existing and new employees into our operations, or we may be unable to implement our business strategy in the time frame we anticipate, if at all. We will need to upgrade our accounting system in the near future, which will result in significant cost and could result in reporting errors and other difficulties that may disrupt our business operations and distract our management. In addition, we will need to expand our intranet to support our new operations and to enhance our research and development efforts. Our intranet is expensive to expand and must be highly secure due to the sensitive nature of the information that we transmit. Building and managing the support necessary for our growth places significant demands on our management and resources. These demands may divert these resources from the continued growth of our business and implementation of our business strategy. Further, we must adequately train our new personnel, especially our engineering design personnel, to adequately anticipate and satisfy our customers' needs for faster and better products. If we fail to do this, it could lead to dissatisfaction among our customers, which could slow our growth.

We depend on manufacturers' representatives and distributors to distribute our products.

We market and distribute our products primarily through manufacturers' representatives and independent distributors. Our distributors typically offer competing products. The distribution channels have been characterized by rapid change, including consolidations and financial difficulties. Our operating results could be materially adversely affected by the loss of one or more manufacturers' representatives or distributors, or the decision by one or more distributors to reduce the number of our products offered by such distributors or to carry the product lines of our competitors.

We may not be able to expand our proprietary technology if we do not acquire rights to use key technologies, consummate potential acquisitions or investments or successfully integrate them with our business.

To expand our proprietary technologies, we may acquire or make investments in complementary businesses, technologies or products if appropriate opportunities arise. We may be unable to identify suitable acquisition or investment candidates at reasonable prices or on reasonable terms or consummate transactions with such candidates, the failure of which could slow our growth strategy. We may also have difficulty in acquiring licenses to use proprietary technologies of third parties to expand our product lines. We may have difficulty integrating the acquired products, personnel or technologies of any acquisition we might make. These difficulties could disrupt our ongoing business, distract our management and employees and increase our expenses.

Our operations could be harmed by earthquakes and other natural disasters.

Our corporate headquarters are located in California near major earthquake faults. Additionally, our principal wafer supplier, Oki, is located in Japan which is also subject to the risk of business disruption by earthquakes. Our operations could be harmed in the event of a major earthquake or other natural disaster near our headquarters or other key areas of the world.

We may not carry adequate insurance coverage to protect our business from certain types of loss.

Although we carry general comprehensive liability insurance and other types of insurance coverages typical for most publicly-traded companies, the insurance coverage we retain may not cover the specific damages that we incur. For example, we do not carry earthquake insurance coverage and our commercial coverage does not include protection for lost profits. Consequently, our business may not be protected if we incur losses of a type for which we do not retain coverage. Additionally, disputes with our carriers regarding policy coverages might occur which could mean that we would be unable to recover all of our damages in the event of a loss. Such occurrences could negatively affect our business, financial condition and results of operations.

A change of control may be delayed by resistive measures adopted by us.

Our Stockholder Rights Plan, which provides stockholders with certain rights to acquire shares of common stock in the event a third party acquires more than 15% of our stock, our Board's ability to issue blank check Preferred Stock without stockholder approval and our staggered terms for our directors, could have the effect of delaying or preventing a change in control of Catalyst.

Table of Contents

Item 3. Quantitative and Qualitative Disclosures About Market Risk

Interest Rate Risk. We do not use derivative financial instruments in our investment portfolio. Our investment portfolio is generally comprised of cash deposits. Our policy is to place these investments in instruments that meet high credit quality standards. These securities are subject to interest rate risk and could decline in value if interest rates fluctuate. Due to the short duration and conservative nature of our investment portfolio, we do not expect any material loss with respect to our investment portfolio.

Foreign Currency Exchange Rate Risk. The majority of our sales, cost of manufacturing and marketing are transacted in U.S. Dollars. Accordingly, our results of operations are not currently subject to foreign exchange rate fluctuations. Gains and losses from such fluctuations have not been material to us to date.

Item 4. Controls and Procedures

(a) *Evaluation of disclosure controls and procedures.* Our chief executive officer and our chief financial officer, after evaluating the effectiveness of our disclosure controls and procedures (as defined in the Securities Exchange Act of 1934 Rules 13a-14(c) and 15-d-14(c)) as of a date (the Evaluation Date) within 90 days before the filing date of this quarterly report, have concluded that as of the Evaluation Date, our disclosure controls and procedures were adequate and designed to ensure that material information relating to us and our consolidated subsidiaries would be made known to them by others within those entities so that we are able to record, process, summarize and disclose such information in the reports we file with the SEC within the time periods specified in the SEC's rules and forms.

(b) *Changes in internal controls.* During the fiscal quarter ended October 31, 2002, there were no significant changes in our internal controls or in other factors that could significantly affect these controls subsequent to the Evaluation Date.

Table of Contents**PART II
OTHER INFORMATION****Item 5. Other Information.**

In accordance with Section 10A(i)(2) of the Securities Exchange Act of 1934, as added by Section 202 of the Sarbanes-Oxley Act of 2002 (Act), we are required to disclose the non-audit services approved by our Audit Committee to be performed by PricewaterhouseCoopers LLP (PWC), our external auditor. Non-audit services are defined in the Act as services other than those provided in connection with an audit or a review of the financial statements of a company. The Audit Committee has approved the engagement of PWC for the following non-audit services: (1) a Research and Development tax credit study and (2) consulting services regarding the establishment of various foreign operating subsidiaries.

Item 6. Exhibits and Reports on Form 8-K**(a) Exhibits:**

Exhibit Number	Description
3.2	(1) Restated Certificate of Incorporation of Registrant.
3.4	(2) Bylaws of Registrant
4.1	(3) Preferred Shares Rights Agreement, dated as of December 3, 1996, between Catalyst Semiconductor, Inc. and First National Bank of Boston, including the Certificate of Designation of Rights, Preferences and Privileges of Series A Participating Preferred Stock, the Form of Rights Certificate and the Summary of Rights attached thereto as Exhibits A, B and C respectively.
4.2	(4) Amendment No. 1 to Preferred Shares Rights Agreement dated as of May 22, 1998 between Registrant and BankBoston, N. A., as rights agent.
4.3	(4) Amendment No. 2 to Preferred Shares Rights Agreement dated as of September 14, 1998 between Registrant and BankBoston, N. A., as rights agent.
4.4	(5) Amendment No. 3 to Preferred Shares Rights Agreement dated as of September 27, 2001 between Registrant and EquiServe Trust Company N.A., as rights agent.
4.5	(4) Amendment No. 4 to Preferred Shares Rights Agreement dated as of July 17, 2002 between Registrant and EquiServe Trust Company N.A., as rights agent.
99.1	Certification pursuant to 18 U.S.C. Section 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002

- (1) Incorporated by reference to an Appendix to Registrant's Definitive Proxy Statement filed December 18, 1998.
- (2) Incorporated by reference to Registrant's Form 10-Q/A (Am. No. 1) filed for the quarter ended November 1, 1998.
- (3) Incorporated by reference to Exhibit 1 to Registrant's Form 8-A filed on January 22, 1997.
- (4) Incorporated by reference to Registrant's Form 10-K filed July 29, 2002.
- (5) Incorporated by reference to Registrant's Form 10-Q filed December 12, 2001.

Table of Contents

(b) Reports on Form 8-K:

Catalyst filed two Reports on Form 8-K during the twelve months ended October 31, 2002, as follows:

(i) On August 22, 2002, we filed a Report on Form 8-K announcing the appointment of Mr. Henry C. Montgomery as the Chairman of our Board, replacing Mr. Radu Vanco who left our employment as President and Chief Executive Officer on August 21, 2002 and the appointment of Mr. Gelu Voicu as our Executive Vice President and Chief Operating Officer.

(ii) On October 31, 2002, we filed a Report on Form 8-K announcing the promotion of Mr. Gelu Voicu to President and Chief Executive Officer of Catalyst and Mr. Voicu's appointment to our Board of Directors.

CERTIFICATIONS

I, Gelu Voicu, certify that:

1. I have reviewed this quarterly report on Form 10-Q of Catalyst Semiconductor, Inc.;
2. Based on my knowledge, this quarterly report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this quarterly report;
3. Based on my knowledge, the financial statements, and other financial information included in this quarterly report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this quarterly report;
4. The registrant's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-14 and 15d-14) for the registrant and we have:
 - a) Designed such disclosure controls and procedures to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this quarterly report is being prepared;
 - b) Evaluated the effectiveness of the registrant's disclosure controls and procedures as of a date within 90 days prior to the filing date of this quarterly report (the Evaluation Date); and
 - c) Presented in this quarterly report our conclusions about the effectiveness of the disclosure controls and procedures based on our evaluation as of the Evaluation Date;
5. The registrant's other certifying officers and I have disclosed, based on our most recent evaluation, to the registrant's auditors and the audit committee of registrant's board of directors (or persons performing the equivalent function):
 - a) All significant deficiencies in the design or operation of internal controls which could adversely affect the registrant's ability to record, process, summarize and report financial data and have identified for the registrant's auditors any material weaknesses in internal controls; and
 - b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal controls; and
6. The registrant's other certifying officers and I have indicated in this quarterly report whether or not there were significant changes in internal controls or in other factors that could significantly affect internal controls subsequent to the date of our most recent evaluation, including any corrective actions with regard to significant deficiencies and material weaknesses.
