## NOTES TO QUARTERLY PORTFOLIO OF INVESTMENTS

### FIRST TRUST/FIDAC MORTGAGE INCOME FUND JANUARY 31, 2008 (UNAUDITED)

#### 1. VALUATION AND INVESTMENT PRACTICES

##### A. PORTFOLIO VALUATION:

The net asset value ("NAV") of the Common Shares of the First Trust/FIDAC Mortgage Income Fund (the "Fund") is determined daily as of the close of regular trading on the New York Stock Exchange ("NYSE"), normally 4:00 p.m. Eastern time, on each day the NYSE is open for trading. Domestic debt securities and foreign securities are priced using data reflecting the earlier closing of the principal markets for those securities. The NAV per Common Share is calculated by subtracting the Fund's liabilities (including accrued expenses, dividends payable and all borrowings of the Fund) from the Fund's Total Assets (the value of the securities and other investments the Fund holds plus cash or other assets, including interest accrued but not yet received) and dividing the result by the total number of Common Shares outstanding.

The Fund's investments are valued daily at market value or, in the absence of market value with respect to any portfolio securities, at fair value according to procedures adopted by the Fund's Board of Trustees. Securities for which market quotations are readily available are valued at market value, which is currently determined using the last reported sale price or, if no sales are reported (as in the case of some securities traded over-the-counter), the last reported bid price, except that certain U.S. government securities are valued at the mean between the last reported bid and asked prices. The Fund values mortgage-backed securities and other debt securities not traded in an organized market on the basis of valuations provided by dealers or by an independent pricing service, approved by the Board of Trustees, which uses information with respect to transactions in such securities, quotations from dealers, market transactions for comparable securities, various relationships between securities and yield to maturity in determining value. Debt securities having a remaining maturity of less than sixty days when purchased and debt securities originally purchased with maturities of sixty days or more but which currently have maturities of less than sixty days are valued at cost adjusted for amortization of premiums and accretion of discounts. In the event that market quotations are not readily available, the pricing service does not provide a valuation for a particular security, or the valuations are deemed unreliable, First Trust Advisors L.P. ("First Trust") may use a fair value method to value the Fund's securities and investments. Additionally, if events occur after the close of the principal market for particular securities (e.g., domestic debt and foreign securities), but before the Fund values its assets, that could materially affect NAV, First Trust may use a fair value method to value the Fund's securities and investments. The use of fair value pricing by the Fund is governed by valuation procedures adopted by the Fund's Board of Trustees, and in accordance with the provisions of the Investment Company Act of 1940, as amended.

##### B. SECURITIES TRANSACTIONS:

Securities transactions are recorded as of the trade date. Realized gains and losses from securities transactions are recorded on the identified cost basis. Securities purchased or sold on a when-issued or delayed-delivery basis may be settled a month or more after the trade date; interest income on such securities is not accrued until settlement date. The Fund maintains liquid assets with a current value at least equal to the amount of its when-issued or delayed-delivery purchase commitments. At January 31, 2008, the Fund had no

## Edgar Filing: FIRST TRUST/FIDAC MORTGAGE INCOME FUND - Form N-Q

when-issued or delayed-delivery purchase commitments.

### C. REVERSE REPURCHASE AGREEMENTS:

A reverse repurchase agreement, although structured as a sale and repurchase obligation, acts as a financing under which the Fund pledges its assets as collateral to secure a short-term loan. Generally, the other party to the agreement makes the loan in an amount equal to a percentage of the market value of the pledged collateral. At the maturity of the reverse repurchase agreement, the Fund will be required to repay the loan and correspondingly receive back its collateral. While used as collateral, the assets continue to pay principal and interest which are for the benefit of the Fund.

Information for the three months ended January 31, 2008:

Maximum amount outstanding during the period.....	\$24,663,000
Average amount outstanding during the period*.....	\$23,802,250
Average monthly shares outstanding during the period.....	4,045,236
Average debt per share outstanding during the period.....	\$5.88

\*The average amount outstanding during the period was calculated by adding the borrowings at the end of each day and dividing the sum by the number of days in the three months ended January 31, 2008.

Interest rates ranged from 3.10% to 4.94% during the three months ended January 31, 2008, on borrowings by the Fund under reverse repurchase agreements.

### D. INVERSE FLOATING RATE INSTRUMENTS

An inverse floating rate security is one where the coupon is inversely indexed to a short-term floating interest rate multiplied by a specific factor. As the floating rate rises, the coupon is reduced. Conversely, as the floating rate declines, the coupon is increased. The price of these securities may be more volatile than the price of a comparable fixed-rate security. These instruments are typically used to enhance the yield of the portfolio. The investments are identified on the Portfolio of Investments.

#### 2. UNREALIZED APPRECIATION (DEPRECIATION)

As of January 31, 2008, the aggregate gross unrealized appreciation for all securities in which there was an excess of value over tax cost was \$2,242,058 and the aggregate gross unrealized depreciation for all securities in which there was an excess of tax cost over value was \$1,377,683.
