SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, D.C. 20549

FORM 10-Q

Quarterly Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934 for the Quarterly Period Ended March 31, 2013.

or

Transition Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934 for the Transition Period from to .

Commission File Number: 001-14785

GSE SYSTEMS, INC.

(Exact name of registrant as specified in its charter)

Delaware
(State of incorporation)

52-1868008
(I.R.S. Employer Identification No.)

1332 Londontown Blvd., Suite 200, Sykesville, MD 21784
(Address of principal executive office and zip code)

Registrant's telephone number, including area code: (410) 970-7800

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Sections 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the Registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such period that the registrant was required to submit and post such files). Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer", "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company

Edgar Filing: GSE SYSTEMS INC - Form 10-Q

(Do not check if a smaller
reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in rule 12(b)-2 of the Exchange Act). Yes [] No [X]

There were 18,349,838 shares of common stock, with a par value of \$.01 per share outstanding as of May 13, 2013.

The accompanying notes are an integral part of these consolidated financial statements.

1. Basis of Presentation and Revenue Recognition

Basis of Presentation

The consolidated interim financial statements included herein have been prepared by GSE Systems, Inc. (the “Company” or “GSE”) without independent audit. In the opinion of the Company's management, all adjustments and reclassifications of a normal and recurring nature necessary to present fairly the financial position, results of operations and cash flows for the periods presented have been made. Certain information and footnote disclosures normally included in financial statements prepared in accordance with U.S. generally accepted accounting principles (“GAAP”) have been condensed or omitted. The results of operations for interim periods are not necessarily an indication of the results for the full year. These consolidated financial statements should be read in conjunction with the consolidated financial statements and notes thereto included in the Company's Annual Report on Form 10-K for the year ended December 31, 2012 filed with the Securities and Exchange Commission on March 11, 2013.

The Company has only one reportable segment. The Company has a wide range of knowledge of simulation systems and the processes those systems are intended to control and model. The Company's knowledge is concentrated heavily in simulation technology and model development. The Company is primarily engaged in simulation for the power generation industry and the process industries. Contracts typically range from twelve months to three years.

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements as well as reported amounts of revenues and expenses during the reporting period. The Company's most significant estimates relate to revenue recognition, capitalization of software development costs, valuation of intangible assets acquired, contingent consideration issued in business acquisitions, and the recoverability of deferred tax assets. Actual results could differ from these estimates and those differences could be material.

Revenue Recognition

The majority of the Company's revenue is derived through the sale of uniquely designed systems containing hardware, software and other materials under fixed-price contracts. Revenue under these fixed-price contracts is accounted for on the percentage-of-completion method. This methodology recognizes revenue and earnings as work progresses on the contract and is based on an estimate of the revenue and earnings earned to date, less amounts recognized in prior periods. The Company bases its estimate of the degree of completion of the contract by reviewing the relationship of costs incurred to date to the expected total costs that will be incurred on the project. Estimated contract earnings are reviewed and revised periodically as the work progresses, and the cumulative effect of any change in estimate is recognized in the period in which the change is identified. Estimated losses are charged against earnings in the period such losses are identified. The Company recognizes revenue arising from contract claims either as income or as an offset against a potential loss only when the amount of the claim can be estimated reliably and realization is probable and there is a legal basis for the claim.

Uncertainties inherent in the performance of contracts include labor availability and productivity, material costs, change order scope and pricing, software modification and customer acceptance issues. The reliability of these cost estimates is critical to the Company's revenue recognition as a significant change in the estimates can cause the Company's revenue and related margins to change significantly from the amounts estimated in the early stages of the project.

As the Company recognizes revenue under the percentage-of-completion method, it provides an accrual for estimated future warranty costs based on historical experience and projected claims. The Company's long-term contracts generally provide for a one-year warranty on parts, labor and any bug fixes as it relates to software embedded in the systems.

The Company's system design contracts do not normally provide for "post customer support service" ("PCS") in terms of software upgrades, software enhancements or telephone support. In order to obtain PCS, the customers must normally purchase a separate contract. Such PCS arrangements are generally for a one-year period renewable annually and include customer support, unspecified software upgrades, and maintenance releases. The Company recognizes revenue from these contracts ratably over the life of the agreements.

Revenue from the sale of software licenses which do not require significant modifications or customization for the Company's modeling tools are recognized when the license agreement is signed, the license fee is fixed and determinable, delivery has occurred, and collection is considered probable.

Revenue from certain consulting or training contracts is recognized on a time-and-material basis. For time-and-material type contracts, revenue is recognized based on hours incurred at a contracted labor rate plus expenses.

For the three months ended March 31, 2013 and 2012, the following customer has provided more than 10% of the Company's consolidated revenue:

	Three Months ended	
	March 31,	
	2013	2012
Slovenské elektrárne, a.s.	23.3%	8.0%

2. Basic and Diluted Income (Loss) Per Common Share

Basic income (loss) per share is based on the weighted average number of outstanding common shares for the period. Diluted income (loss) per share adjusts the weighted average shares outstanding for the potential dilution that could occur if stock options were exercised into common stock. The number of common shares and common share equivalents used in the determination of basic and diluted income (loss) per share were as follows:

(in thousands, except for share amounts)	Three Months ended	
	March 31, 2013	2012
Numerator:		
Net income (loss)	\$ (1,155)	\$ 530
Denominator:		
Weighted-average shares outstanding for basic earnings per share	18,340,554	18,395,585
Effect of dilutive securities:		
Employee stock options	-	73,233
Adjusted weighted-average shares outstanding and assumed conversions for diluted earnings per share	18,340,554	18,468,818
Shares related to dilutive securities excluded because inclusion would be anti-dilutive	2,898,615	2,696,374

3. Contract Receivables

Contract receivables represent balances due from a broad base of both domestic and international customers. All contract receivables are considered to be collectible within twelve months. Recoverable costs and accrued profit not billed represent costs incurred and associated profit accrued on contracts that will become billable upon future milestones or completion of contracts. The components of contract receivables are as follows:

(in thousands)	March 31, 2013	December 31, 2012
Billed receivables	\$ 10,970	\$ 12,403
Recoverable costs and accrued profit not billed	11,879	11,315
Allowance for doubtful accounts	(2)	(2)
Total contract receivables, net	\$ 22,847	\$ 23,716

Recoverable costs and accrued profit not billed totaled \$11.9 million and \$11.3 million as of March 31, 2013 and December 31, 2012, respectively. During April 2013, the Company invoiced \$3.7 million of the unbilled amounts.

The following customers account for more than 10% of the Company's consolidated contract receivables for the indicated periods:

	March	December
	31,	31,
	2013	2012
Slovenské elektrárne, a.s.	24.4%	17.4%
Shandong Nuclear Power Co. Ltd.	11.4%	13.8%

4. Software Development Costs

Certain computer software development costs are capitalized in the accompanying consolidated balance sheets. Capitalization of computer software development costs begins upon the establishment of technological feasibility. Capitalization ceases and amortization of capitalized costs begins when the software product is commercially available for general release to customers. Amortization of capitalized computer software development costs is included in cost of revenue and is determined using the straight-line method over the remaining estimated economic life of the product, typically three years.

Software development costs capitalized were \$497,000 for the three months ended March 31, 2013, and \$269,000 for the three months ended March 31, 2012. Total amortization expense was \$176,000 for the three months ended March 31, 2013 and \$200,000 for the three months ended March 31, 2012.

5. Fair Value of Financial Instruments

Accounting Standards Codification ("ASC") 820, Fair Value Measurements and Disclosures, defines fair value as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. ASC 820 also establishes a fair value hierarchy which requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value.

The levels of the fair value hierarchy established by ASC 820 are:

Level 1: inputs are quoted prices, unadjusted, in active markets for identical assets or liabilities that the reporting entity has the ability to access at the measurement date.

Level 2: inputs are other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly. A Level 2 input must be observable for substantially the full term of the asset or liability.

Level 3: inputs are unobservable and reflect the reporting entity's own assumptions about the assumptions that market participants would use in pricing the asset or liability.

The Company considers the recorded value of certain of its financial assets and liabilities, which consist primarily of cash, accounts receivable and accounts payable, to approximate the fair value of the respective assets and liabilities at March 31, 2013 and December 31, 2012 based upon the short-term nature of the assets and liabilities.

Edgar Filing: GSE SYSTEMS INC - Form 10-Q

The following table presents assets and liabilities measured at fair value at March 31, 2013:

(in thousands)	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	Total
Money market fund	\$ 13,325	\$ -	\$ -	\$ 13,325
Certificates of deposit	744	-	-	744
Foreign exchange contracts	-	748	-	748
Total assets	\$ 14,069	\$ 748	\$ -	\$ 14,817
Foreign exchange contracts	\$ -	\$ (225)	\$ -	\$ (225)
Total liabilities	\$ -	\$ (225)	\$ -	\$ (225)

The following table presents assets and liabilities measured at fair value at December 31, 2012:

(in thousands)	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	Total
Money market fund	\$ 18,082	\$ -	\$ -	\$ 18,082
Certificates of deposit	890	-	-	890
Foreign exchange contracts	-	316	-	316
Total assets	\$ 18,972	\$ 316	\$ -	\$ 19,288
Foreign exchange contracts	\$ -	\$ (339)	\$ -	\$ (339)
Total liabilities	\$ -	\$ (339)	\$ -	\$ (339)

6. Derivative Instruments

The Company utilizes forward foreign currency exchange contracts to manage market risks associated with the fluctuations in foreign currency exchange rates. It is the Company's policy to use such derivative financial instruments to protect against market risk arising in the normal course of business in order to reduce the impact of these exposures. The Company minimizes credit exposure by limiting counterparties to nationally recognized financial institutions.

As of March 31, 2013, the Company had foreign exchange contracts outstanding of approximately 0.8 million Pounds Sterling, 17.1 million Euro, and 62.1 million Japanese Yen at fixed rates. The contracts expire on various dates through May 2016. At December 31, 2012, the Company had contracts outstanding of approximately 0.8 million Pounds Sterling, 9.9 million Euro, and 61.8 million Japanese Yen at fixed rates. The Company has not designated any of the foreign exchange contracts outstanding as hedges and has recorded the estimated fair value of the contracts in the consolidated balance sheets as follows:

(in thousands)	March 31, 2013	December 31, 2012
Asset derivatives		
Prepaid expenses and other current assets	\$718	\$296
Other assets	30	20
	748	316
Liability derivatives		
Other current liabilities	(155)	(190)
Other liabilities	(70)	(149)
	(225)	(339)
Net fair value	\$523	\$(23)

The changes in the fair value of the foreign exchange contracts are included in net gain on derivative instruments in the consolidated statements of operations.

The foreign currency denominated contract receivables, billings in excess of revenue earned and subcontractor accruals that are related to the outstanding foreign exchange contracts are remeasured at the end of each period into the functional currency using the current exchange rate at the end of the period. The gain or loss resulting from such remeasurement is also included in net gain on derivative instruments in the consolidated statements of operations.

For the three months ended March 31, 2013 and 2012, the Company recognized a net gain on its derivative instruments as outlined below:

(in thousands)	Three Months ended March 31, 2013	2012
Foreign exchange contracts- change in fair value	\$549	\$186
Remeasurement of related contract receivables, billings in excess of		

revenue earned, and subcontractor accruals	(282)	214
Gain on derivative instruments, net	\$267		\$400

13

7. Stock-Based Compensation

The Company recognizes compensation expense for all equity-based compensation awards issued to employees, directors and non-employees that are expected to vest. Compensation cost is based on the fair value of awards as of the grant date. The Company recognized \$224,000 and \$220,000 of stock-based compensation expense for the three months ended March 31, 2013 and 2012, respectively, under the fair value method. The Company granted 64,500 stock options for the three months ended March 31, 2013. The fair value of the options granted for the three months ended March 31, 2013 was \$78,000. The Company granted 92,870 stock options for the three months ended March 31, 2012. The fair value of the options granted for the three months ended March 31, 2012 was \$64,000.

8. Long-Term Debt

At March 31, 2013 and December 31, 2012, the Company had no long-term debt outstanding.

Line of Credit

The Company has a Master Loan and Security Agreement and Revolving Credit Note with Susquehanna Bank (“Susquehanna”). The Company and its subsidiaries, GSE Power Systems, Inc., and GSE EnVision LLC, are jointly and severally liable as co-borrowers. The Loan Agreement provides a \$7.5 million revolving line of credit for the purpose of (i) issuing stand-by letters of credit and (ii) providing working capital. Working capital advances bear interest at a rate equal to the Wall Street Journal Prime Rate of Interest, floating with a floor of 4 ½%. The two-year agreement expires on November 1, 2013.

As collateral for the Company’s obligations, the Company granted a first lien and security interest in all of the assets of the Company, including but not limited to, accounts receivable, inventory, proceeds and products, intangibles, trademarks, intellectual property, and machinery and equipment.

Issuances of stand-by letters of credit and advances of working capital (collectively referred to as the “Advances”) require that the Company maintain a minimum cash balance of \$3.0 million at all times (the “Cash Balance Requirement”). The Cash Balance Requirement will remain at the minimum amount as long as the Company’s quarterly net income (exclusive of gains and losses on derivative instruments and stock option expense) as defined (“Net Income”) remains positive and the Company is in compliance with the covenants. If the Company’s quarterly consolidated Net Income is negative or the Company is not in compliance with the covenants, the Cash Balance Requirement will revert to the amount of the Advances, until the Company attains positive Net Income for two consecutive quarters. The credit agreements contain certain restrictive covenants regarding future acquisitions, and incurrence of debt. In addition, the credit agreements contain financial covenants with respect to the Company’s cash flow coverage ratio, minimum tangible capital base, quick ratio, and tangible capital base ratio. At March 31, 2013, the Company had not paid any interest or principal payments related to any borrowings for over one year. As such, the cash flow coverage ratio is not applicable at March 31, 2013.

	Covenant	As of March 31, 2013
Minimum tangible capital base	Must Exceed \$26.0 million	\$31.9 million
Quick ratio	Must Exceed 2.00 : 1.00	2.59 : 1.00
Tangible capital base ratio	Not to Exceed .75 : 1.00	.58 : 1.00

As the Company's Net Income for the three months ended March 31, 2013 as defined above was negative, the Company will currently be required to maintain a cash balance of \$3.7 million at Susquehanna which is equivalent to the amount of Advances at March 31, 2013. All of the Company's outstanding Advances as of March 31, 2013 consisted of stand-by letters of credit.

As of March 31, 2013, the Company was contingently liable for sixteen standby letters of credit and five surety bonds totaling \$6.6 million which represent performance and bid bonds on sixteen contracts. The Company has deposited the full value of six standby letters of credit in certificates of deposit and escrow accounts (\$1.8 million) which have been restricted in that the Company does not have access to these funds until the related letters of credit have expired. The cash has been recorded on the Company's balance sheet at March 31, 2013 as restricted cash.

9. Product Warranty

As the Company recognizes revenue under the percentage-of-completion method, it provides an accrual for estimated future warranty costs based on historical experience and projected claims. The activity in the warranty account is as follows:

(in thousands)

Balance at December 31, 2012	\$ 2,107
Warranty provision	167
Warranty claims	(285)
Currency adjustment	(1)
Balance at March 31, 2013	\$ 1,988

10. Contingent Consideration

ASC Topic 805 requires that contingent consideration be recognized at fair value on the acquisition date and be re-measured each reporting period with subsequent adjustments recognized in the consolidated statement of operations.

As of March 31, 2013 and December 31, 2012, contingent consideration included in the other current liabilities on the consolidated balance sheet totaled \$1.3 million and \$1.6 million, respectively. As of March 31, 2013 and December 31, 2012, the Company also had accrued contingent consideration totaling \$363,000 and \$902,000, respectively, which is included in other long-term liabilities on the consolidated balance sheet and represents the portion of contingent consideration estimated to be payable greater than twelve months from the balance sheet date. During the three months ended March 31, 2013 the Company made payments of \$979,000 related to the liability classified contingent consideration arrangements.

11. Income Taxes

The Company files in the United States federal jurisdiction and in several state and foreign jurisdictions. Because of the net operating loss carryforwards, the Company is subject to U.S. federal and state income tax examinations from years 1997 forward and is subject to foreign tax examinations by tax authorities for years 2006 and forward. Open tax years related to state and foreign jurisdictions remain subject to examination but are not considered material to our financial position, results of operations or cash flows.

An uncertain tax position taken or expected to be taken in a tax return is recognized in the financial statements when it is more likely than not (i.e., a likelihood of more than fifty percent) that the position would be sustained upon examination by tax authorities that have full knowledge of all relevant information. A recognized tax position is then measured at the largest amount of benefit that is greater than fifty percent likely of being realized upon ultimate settlement. Interest and penalties related to income taxes are accounted for as income tax expense.

The Company expects to pay income taxes in the United Kingdom, India, and China in 2013. In 2012, the Company paid income taxes in Sweden, India, and China. The Company has a full valuation allowance on its U.S. net deferred tax assets at March 31, 2013.

12. Preferred Stock Rights

On March 21, 2011, the Board of Directors of the Company declared a dividend, payable to holders of record as of the close of business on April 1, 2011, of one preferred stock purchase right (a Right) for each outstanding share of common stock, par value \$0.01 per share, of the Company (the Common Stock). In addition, the Company will issue one Right with each new share of Common Stock issued. In connection therewith, on March 21, 2011, the Company entered into a Stockholder Protection Rights Agreement (as amended from time to time, the Rights Agreement) with Continental Stock Transfer & Trust Company, as Rights Agent, which has a term of three years, unless amended by the Board of Directors in accordance with the terms of the Rights Agreement. Upon approval of both an independent committee of the Board of Directors and the Board of Directors, the Rights Plan can be extended for up to three years. The Rights will initially trade with and be inseparable from the Common Stock and will not be evidenced by separate certificates unless they become exercisable. Each Right entitles its holder to purchase from the Company one-hundredth of a share of participating preferred stock having economic and voting terms similar to the Common Stock at an exercise price of \$8.00 per Right, subject to adjustment in accordance with the terms of the Rights Agreement, once the Rights become exercisable. Under the Rights Agreement, the Rights become exercisable if any person or group acquires 20% or more of the Common Stock or, in the case of any person or group that owned 20% or more of the Common Stock as of March 21, 2011, upon the acquisition of any additional shares by such person or group. The Company, its subsidiaries, employee benefit plans of the Company or any of its subsidiaries and any entity holding Common Stock for or pursuant to the terms of any such plan are accepted. Upon exercise of the Right in accordance with the Rights Agreement, the holder would be able to purchase a number of shares of Common Stock from the Company having an aggregate market price (as defined in the Rights Agreement) equal to twice the then-current exercise price for an amount in cash equal to the then-current exercise price. In addition, the Company may, in certain circumstances and pursuant to the terms of the Rights Agreement, exchange the Rights for one share of Common Stock or an equivalent security for each Right or, alternatively, redeem the Rights for \$0.001 per Right. The Rights will not prevent a takeover of our Company, but may cause substantial dilution to a person that acquires 20% or more of the Company's Common Stock.

13. Share Repurchase Plan

On March 21, 2011, the Board of Directors authorized the purchase of up to \$3.0 million of the Company's common stock in accordance with the safe harbor provisions of Rule 10b-18 of the Securities Exchange Act of 1934. During the three months ended March 31, 2013, the Company repurchased 1,100 shares at an aggregate cost of \$2,000. During the three months ended March 31, 2012, the Company repurchased 162,387 shares at an aggregate cost of \$303,000.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

GSE Systems, Inc. ("GSE Systems", "GSE" or the "Company") is a world leader in real-time high fidelity simulation. The Company provides simulation and educational solutions and services to the nuclear and fossil electric utility industry, and the chemical and petrochemical industries.

GSE is the parent company of:

- ◆ GSE Power Systems, Inc., a Delaware corporation;
- ◆ GSE Power Systems, AB, a Swedish corporation;
- ◆ GSE Engineering Systems (Beijing) Co. Ltd., a Chinese limited liability company;
 - ◆ GSE Systems, Ltd., a Scottish limited liability company;
 - ◆ GSE EnVision, LLC, a New Jersey limited-liability company; and
- ◆ EnVision Systems (India) Pvt. Ltd., an Indian limited liability company.

The Company has a 49% minority interest in GSE-UNIS Simulation Technology Co., Ltd., a Chinese limited liability company, and has a 10% minority interest in Emirates Simulation Academy, LLC, a United Arab Emirates limited liability company. The Company has only one reportable segment.

Cautionary Statement Regarding Forward-Looking Statements

This report contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. The Private Securities Litigation Reform Act of 1995 provides a "safe harbor" for forward looking statements. Forward-looking statements are not statements of historical facts, but rather reflect our current expectations concerning future events and results. We use words such as "expects", "intends", "believes", "may", "will" and "anticipates" to indicate forward-looking statements. Because these forward-looking statements involve risks and uncertainties, there are important factors that could cause actual results to differ materially from those expressed or implied by these forward-looking statements, including, but not limited to, those factors set forth under Item 1A - Risk Factors of the Company's 2012 Annual Report on Form 10-K and those other risks and uncertainties detailed in the Company's periodic reports and registration statements filed with the Securities and Exchange Commission. We caution that these risk factors may not be exhaustive. We operate in a continually changing business environment, and new risk factors emerge from time to time. We cannot predict these new risk factors, nor can we assess the effect, if any, of the new risk factors on our business or the extent to which any factor or combination of factors may cause actual results to differ from those expressed or implied by these forward-looking statements.

If any one or more of these expectations and assumptions proves incorrect, actual results will likely differ materially from those contemplated by the forward-looking statements. Even if all of the foregoing assumptions and expectations prove correct, actual results may still differ materially from those expressed in the forward-looking statements as a result of factors we may not anticipate or that may be beyond our control. While we cannot assess the future impact that any of these differences could have on our business, financial condition, results of operations and cash flows or the market price of shares of our common stock, the differences could be significant. We do not undertake to update any forward-looking statements made by us, whether as a result of new information, future events or otherwise. You are cautioned not to unduly rely on such forward-looking statements when evaluating the information presented in this report.

General Business Environment

It has been over two years since a 9.0 magnitude earthquake and subsequent tsunami occurred along the northeast coast of Japan which damaged the Fukushima Daiichi I Nuclear Power Plant, which is maintained by the Tokyo Electric Power Company (TEPCO). The impact on the Company's revenue is only now being seen with a reduction in revenue from both Japanese and German customers, two traditionally strong sources of revenue for the Company. However, despite the near-term downturn in simulation orders from customers in these countries, the future for nuclear power continues to look strong in other parts of the world. China, Korea and Russia are each developing or modernizing their nuclear technologies to provide attractive alternatives for export sales to the emerging nuclear markets in Southeast Asia, Africa and the Middle East. GSE continues to work with partners and establish relationships in China, Korea, and Russia to take advantage of those growing domestic and export markets, and has allocated senior management resources to help develop these markets.

Worldwide, there are 437 operating reactors, 67 currently being built, and 484 additional reactors planned or proposed to be operational by 2030. Vast growth opportunities exist for companies like GSE who provide solutions to catastrophes such as Three Mile Island, Chernobyl, and Fukushima. GSE's growth was propelled by the global response to the former two, and we expect nothing less this time.

In Japan, tough new rules for Japanese nuclear power plants have been revealed in draft form. Among them are that power companies should be able to contain a severe accident situation for an entire week without outside help. The draft proposals for accident prevention and mitigation came from Japan's newly established Nuclear Regulation Authority (NRA), which has enough independence to do its work free from governmental control and undue industrial influence. Industry minister Toshimitsu Motegi has said recently that some of the country's idled nuclear reactors might resume operations in autumn 2013 at the earliest after undergoing a new safety assessment process in accordance with the NRA's proposals. Of Japan's 50 commercial reactors, only two are currently online.

According to a new report entitled European Nuclear Power Sector: Trends and Opportunities, "nuclear energy shows potential to reduce emissions and dependence on fossil fuels, and therefore, will be a major contributor to the European energy mix in 2020." Additionally, the consulting firm Frost & Sullivan believes nuclear energy is the European Union's answer to meeting aggressive targets on carbon dioxide emissions while reducing dependency on fossil fuels. The report notes that, despite the accident at the Fukushima Daiichi plant in Japan, the number of nuclear power reactors under construction worldwide "is still higher now than across the last two decades." France, Finland, the UK and Sweden have all reaffirmed their commitment to nuclear power, while Poland, Romania and the Czech Republic are planning to push ahead with new units, following increased safety assessments. According to Frost & Sullivan, nuclear plant life extensions represent a bigger market over the next 20 years than new builds for the current nuclear supply chain. Life extension projects are likely to take place at plants with a combined generating capacity of 132 GWe.

Most countries with nuclear programs reacted to the Fukushima disaster by announcing the delay of new nuclear plants while they conducted reviews of their programs. On March 9, 2012, the U.S. Nuclear Regulatory Commission (NRC) approved the first three new regulatory requirements to deal with safety issues based on eight changes identified by the NRC's Fukushima task force, with implementation required by the end of 2016. The three orders require safety enhancements of operating reactors, construction permit holders, and combined license holders. These orders require nuclear power plants to implement safety enhancements related to (1) mitigation strategies to respond to extreme natural events resulting in the loss of power at plants, (2) ensuring reliable hardened containment vents, and (3) enhancing spent fuel pool instrumentation. In addition, the NRC requested each reactor reevaluate the seismic and flooding hazards at their site using present-day methods and information.

On May 31, 2012, the State Council, China's Cabinet, approved a nuclear safety plan for 2011-2015 following a nine month safety inspection of China's 41 nuclear power plants, which at the time, were either operating or under construction. Some power plants had to develop better procedures for severe accident prevention and mitigation. China National Nuclear Power, the biggest nuclear power developer in the country, has announced plans to raise money for projects worth more than \$27 billion through what could be one of the biggest initial public offerings (IPO) in China and the first for a nuclear power company.

In October 2012, China made further plans to restart nuclear plant construction, ending a one year moratorium on building new nuclear plants imposed after Japan's nuclear accident. With 17 nuclear reactors that provide about 12.8 gigawatts (GW) of generating capacity and another 29 reactors under construction that add another 29 GW, China plans to build nuclear power plants as a key part of curbing demand on fossil fuels. By 2015, China's government hopes to generate 30% of China's power from solar, renewable energy sources such as wind, and nuclear energy.

As reported by Businessweek.com, Chinese engineers have adapted the Westinghouse Electric Company's AP1000 reactor technology into a larger design, called the CAP1400, which increases the power the reactor can produce from 1,000 megawatts to 1,400 megawatts. Construction on China's first CAP1400 is expected to begin this year and Gu Jun, President of State Nuclear Power said at a February 1, 2013 press conference that the "exploration of the global market for the CAP1400 will start in 2013".

Previous nuclear accidents have resulted in new regulations requiring additional operator training, higher fidelity models and new testing scenarios. Accordingly, as evidenced by the new safety rules that the NRC has recently issued, the Chinese State Council's Safety Plan, and the debate in Japan as to the need for new regulatory guidelines, it is likely that there will be additional governmental regulations requiring plant modifications and new testing scenarios that will result in the need for higher simulator fidelity, such as that designed and supplied by GSE.

GSE has developed PSA-HD™, an engineering-grade nuclear simulation solution that allows operations personnel to train for and develop responses to severe accident scenarios based on the operations of their specific facility. PSA-HD utilizes MAAP 5.0 as the calculation engine, with GSE's real-time executive and graphical interface to provide a dynamic, real-time solution for severe accident analysis. MAAP 5.0 is an Electric Power Research Institute (EPRI) software program that performs severe accident analysis for nuclear power plants including assessments of core damage and radiological transport. A valid license to MAAP 5.0 from EPRI is required to use MAAP 5.0 with PSA-HD. PSA-HD's real-time code can be integrated with a nuclear plant's existing full-scope training simulator and is applicable to all current nuclear plant designs. PSA-HD can be used to validate the utility's severe accident management guidelines (SAMGs), demonstrate the safety of current plant designs to regulators and stakeholders, and identify potential issues with existing plant design that may require modification. PSA-HD includes high-fidelity models of the plant's reactor core, containment structures and spent fuel pool. The models simulate severe accident conditions which mirror those that occurred at the Fukushima facility, such as the release of radioactive materials due to overheating of the core, exposure of the fuel rods in the spent fuel pool, and hydrogen build up in the containment building.

The Company's strategic decisions to reposition away from being just a nuclear simulation company and to diversify our end markets not only proved to be prescient but vital. And while the Company had built up a healthy pipeline of acquisition targets, due to the volatility and uncertainty that would undoubtedly cloud any company servicing the nuclear industry, the Company decided to reassess the pipeline and cling to the strength of its balance sheet as a buoy through the storm.

Natural gas prices and the likelihood of abundant sources through the fracking process have had a significant impact on the fossil fuel power generation market. The changing fuel mix and recent uncertainty regarding environmental regulations delayed some capital projects. New environmental regulations in the U.S. go into effect in 2015 and will require new systems to clean plant emissions. These tend to be complex chemical systems with complex controls and the need to train operators. Contracts for those types of plant upgrades should start to happen in late 2013 and 2014 in order to meet the regulatory deadlines.

Just as the Company has allocated management resource for key nuclear growth markets, the Company has also taken some senior management to focus on growth opportunities in South America and Africa.

For the Company's training business, our aim is lofty – "to change the way the energy industry learns." Continued belief and investment in integrating immersive 3D gaming technology with physics-correct simulation models has led to continued growth since the commercialization of the Activ3Di business in mid-2010. The Company discovered that it was early in introducing this solution, resulting in a longer ramp-up than anticipated. However, as the industry understands and appreciates the profound impact this next generation technology will have in training their workforces faster and better, the Company remains confident this business line will grow rapidly and achieve profitability in 2013.

The Company's engineering services leverages technology to mitigate risk, and save both time and money. Our customers can view design scenarios virtually allowing them to identify and correct problems BEFORE construction and avoiding very costly delays and risk. In one instance, for less than a \$4 million investment in our engineering simulator, the end customer shaved 50% off their planned commissioning time. This accelerated schedule enabled our customer to generate approximately \$40 million ahead of schedule.

Our market opportunity lies at the undeniable intersection of increasing global energy demand and the shortage of qualified energy workforces. New plants, new workers, and replacement workers for aging workforces will need innovative engineering and training solutions. We continue to enjoy serving our many blue chip customers globally from our 10 locations in five countries. This global reach is critical to our strategy as global energy demand is expected to rise 35% by 2040, with a 65% increase in the non-OECD countries. In 2012, 70% of our revenue was generated with customers outside the United States. Additionally, the OECD countries are expecting a 40 – 50% reduction in incumbent energy industry employees due to attrition and retirement in the next five years.

In order to meet the world's growing energy needs, the growth of all forms of energy is critical. Per the ExxonMobil 2012 the Outlook for Energy: A View to 2040, "By 2040 electricity generation will account for more than 40% of global energy consumption. Oil will remain the most widely used fuel, but natural gas will grow fast enough to overtake coal for the number-two position. For both oil and natural gas, an increasing share of global supply will come from unconventional sources, such as those from shale formations. Demand for natural gas will rise by more than 60% through 2040." For more than three decades, we have leveraged the simulation capability that we initially developed for nuclear power for non-nuclear projects. Globally we have delivered 121 fossil power plant simulators and 96 process industry simulators. Our GSE EnVision™ products include interactive multi-media tutorials and simulation models primarily for the petrochemical and oil & gas refining industries. These products provide a foundation in process fundamentals, as well as plant operations and interaction. We now have a tiered offering when it comes to simulation, as well as a large library of training content in multiple languages.

The U.S. Energy Information Administration forecasted that world energy consumption will increase by 52% from 2008 to 2035 with most of the highest growth in Non-OECD countries. Growing consumption means new production, which means new plants, new workers, and an enormous amount of training to provide a skilled workforce. GSE recognized this growing need for energy industry training several years ago and began developing various training solutions leveraging the use of our simulation technology. For example,

- GSE created a 163 module, five-simulator training course that we sold to the Emirates Simulation Academy LLC, in the UAE, a training academy that was created by GSE and two other partners in 2007. GSE continues to use and re-sell these training courses.
- GSE worked with the University of Strathclyde in Glasgow, Scotland to incorporate GSE's simulation into the University's degreed and industrial education programs.
- GSE acquired EnVision training products (GSE EnVision) to provide a full suite of training materials to the petroleum and process industry. This training material includes computer-based tutorials and generic simulators and is available in multiple languages.
- GSE developed and taught multiple 20-week "Nuclear Operator Jump Start Training Programs" for Southern Nuclear Company in Augusta, GA, successfully training the operators and instructors for the first advanced nuclear plant in the United States. GSE used our VPanel™ interactive visual training simulator, which was a key reason that this training was extremely successful.
- GSE developed multiple innovative and interactive 3D training devices for the electric generating and petroleum process industries. GSE's Activ 3Di training devices are being used worldwide by members of the Electric Power Research Institute (EPRI) for training and troubleshooting complex components. These training devices incorporate knowledge from subject matter experts using computers and tablet displays that new learners highly value.
- GSE developed a Generic Pressurized Water Reactor (GPWR) product that is being used worldwide for research and training in research centers and universities. The GPWR includes a generic full scope simulator, operating procedures, plant system descriptions, and training materials and can be used on GSE's VPanel™ or commonly available computer equipment.
- GSE provided innovative training tools and simulators to EDF Energy's Cannington Court training center, helping to transform the 900 year old facility into a showcase training center.

Case studies demonstrate that the inclusion of "serious gaming" technology such as immersive 3D environments can reduce training time and improve learning significantly. In fact, the Royal Canadian Army was able to reduce the cost of training and increase the pass rate of students by incorporating gaming into the curriculum. Due to the advancement of computer processing power and graphics technology, immersive commercially viable off-the-shelf 3D game engines are readily available. Additionally, this style of learning also lends itself to the next generation workforce, and as such, GSE is investing significantly in 3D visualization training products. This investment comes in the form of strategic hires, investment in technology, and software product development. Through development efforts already undertaken, GSE's engineers have discovered how to link our industry-leading, high fidelity models to commercially available off-the-shelf game engines. This enables us to make the invisible visible. The use of GSE's 3D visualization technology allows users to now see the inside of various components of a power plant such as the inside of an operating reactor, steam generator, or turbine generator. Blending the learning strategy of incorporating 3D visualization with high fidelity real time simulation models will allow GSE to provide the energy industry with better, faster, and less costly training ideally suited for the next generation workforce, which we have branded as ACTIV-3Di. In September 2012, the Company introduced the Virtual Flow Loop Trainer™. It can cost a utility approximately \$1.0 million to construct a brick and mortar flow loop facility for training plant operating and maintenance staff. The Virtual Flow Loop Trainer is a practical and cost-effective alternative that operates on personal computers across a company's existing IT infrastructure. The Virtual Flow Loop Trainer provides the same level of training in a convenient, flexible environment. The Virtual Flow Loop Trainer is applicable across all industries and learning organizations that need to train their staff and students on both the fundamental and practical operations of a wide variety of pumps, valves, controllers, and instrumentation.

The dramatic increase in energy demand world-wide over the next 30 years will not only require significant amounts of training for new employees but also require new plants of all sources, too. Obviously, these new plants will need to be engineered and designed prior to construction, and GSE's modeling tools are being used more and more to verify and validate control system design and overall plant designs. Finding design errors during engineering rather than construction allows plant startup to occur sooner saving countless dollars and allowing revenue generation sooner. GSE is developing new design solutions leveraging our high fidelity simulation models to improve and streamline the plant engineering process.

Results of Operations

The following table sets forth the results of operations for the periods presented expressed in thousands of dollars and as a percentage of revenue:

(in thousands)	Three Months ended March 31,			
	2013	%	2012	%
Contract revenue	\$ 12,383	100.0 %	\$ 13,389	100.0 %
Cost of revenue	9,302	75.1 %	9,470	70.7 %
Gross profit	3,081	24.9 %	3,919	29.3 %
Operating expenses:				
Selling, general and administrative	4,165	33.7 %	3,486	26.1 %
Depreciation	153	1.2 %	137	1.0 %
Amortization of definite-lived intangible assets	52	0.4 %	78	0.6 %
Total operating expenses	4,370	35.3 %	3,701	27.7 %
Operating income (loss)	(1,289)	(10.4)%	218	1.6 %
Interest income, net	39	0.3 %	51	0.4 %
Gain on derivative instruments, net	267	2.2 %	400	3.0 %
Other income (expense), net	(105)	(0.8)%	86	0.6 %
Income (loss) before income taxes	(1,088)	(8.7)%	755	5.6 %
Provision for income taxes	67	0.6 %	225	1.6 %
Net income (loss)	\$ (1,155)	(9.3)%	\$ 530	4.0 %

Critical Accounting Policies and Estimates

The preparation of financial statements in accordance with U.S. generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Our estimates, judgments and assumptions are continually evaluated based on available information and experience. Because of the use of estimates inherent in the financial reporting process, actual results could differ from those estimates.

A summary of the Company's significant accounting policies as of December 31, 2012 is included in Note 2 to the Company's Annual Report on Form 10-K for the fiscal year ended December 31, 2012. Certain of our accounting policies require higher degrees of judgment than others in their application. These include revenue recognition on long-term contracts, capitalization of computer software development costs, valuation of intangible assets acquired, contingent consideration issued in business acquisitions, and the recoverability of deferred tax assets. These critical accounting policies and estimates are discussed in the Management's Discussion and Analysis of Financial Condition and Results of Operations section in the 2012 Annual Report on Form 10-K for the fiscal year ended December 31, 2012.

Results of Operations - Three Months ended March 31, 2013 versus Three Months ended March 31, 2012

Contract Revenue. Total contract revenue for the three months ended March 31, 2013 totaled \$12.4 million, which was 7.5% less than the \$13.4 million total revenue for the three months ended March 31, 2012. The Company recorded total orders of \$5.1 million in the three months ended March 31, 2013 compared to \$17.8 million for the three months ended March 31, 2012. Revenue related to the \$36.0 million full scope simulator and digital control system order from Slovenské elektrárne, a.s. (“SE”) was \$2.9 million (23.3% of revenue) and \$1.1 million (8.0% of revenue) for the three months ended March 31, 2013 and 2012, respectively. Offsetting this increase in revenue from the SE order are reductions in revenue from both Japanese and German customers, two traditionally strong sources of revenue for the Company. As an aftermath to the Fukushima earthquake and tsunami which occurred over 2 years ago, the Japanese have shut down all but two of their nuclear reactors and the Germans have announced plans to shut down all of their nuclear reactors by 2022. For the three months ended March 31, 2013 revenue decreased \$1.4 million and \$700,000 from nuclear simulation customers in Japan and Germany, respectively as compared to the same period in the prior year. Furthermore, fossil fuel simulation revenue decreased \$800,000 for the three months ended March 31, 2013 as compared to the three months ended March 31, 2012. At March 31, 2013, the Company’s backlog was \$44.9 million, of which \$8.9 million is related to the SE contract. At December 31, 2012 the Company’s backlog totaled \$51.9 million.

Gross Profit. Gross profit totaled \$3.1 million for the three months ended March 31, 2013 compared to \$3.9 million for the same period in 2012. As a percentage of revenue, gross profit decreased from 29.3% for the three months ended March 31, 2012 to 24.9% for the three months ended March 31, 2013. The increase in revenue on the Slovakia contract, which has an overall gross profit lower than the Company’s normal gross profits, along with a decrease in revenue from our core business have contributed to the decrease in gross profit for the three months ended March 31, 2013.

Selling, General and Administrative Expenses. Selling, general and administrative (“SG&A”) expenses totaled \$4.2 million in the three months ended March 31, 2013, a 19.5% increase from the \$3.5 million for the same period in 2012. The increases reflect the following spending variances:

- ◆ Business development and marketing costs remained flat at \$1.7 million for the three months ended March 31, 2012 and 2013. During the three months ended March 31, 2013, the Company employed three additional business development resources in the United States as compared to the same period in the prior year. Included in business development and marketing costs are bidding and proposal costs, which are the costs of operations personnel assisting with the preparation of contract proposals. Bidding and proposal costs decreased by \$38,000 from the first quarter of 2012 to \$437,000 during the three months ended March 31, 2013.
- ◆ The Company’s general and administrative expenses (“G&A”) increased from \$1.4 million to \$2.2 million for the three months ended March 31, 2012 and 2013, respectively. The fluctuations were primarily attributable to the following:
 - o The Company incurred foreign currency translation losses of \$64,000 for the three months ended March 31, 2013 as compared to foreign currency translation gains of \$94,000 for the three months ended March 31, 2012.
 - o The Company implemented a global Enterprise Resource Planning system during the third quarter 2012. Costs related to support and maintenance of this implementation totaled \$185,000 and \$0 for the three months ending March 31, 2013 and 2012, respectively.
 - o The Company’s subsidiary in the United Kingdom moved offices and reorganized its reporting structure during the three months ended March 31, 2013. The Company’s general and administrative expenses increased \$200,000 for the related facility charges and reclassification of personnel during the three months ended March 31, 2013 as compared to the same period in the prior year.

- ◆ Gross spending on software product development (“development”) expenses for the three months ended March 31, 2013 and 2012 totaled \$721,000 and \$670,000, respectively. The Company capitalized \$497,000 and \$269,000 of product development expenses for the three months ended March 31, 2013 and 2012, respectively. Net development spending decreased from \$401,000 for the three months ended March 31, 2012 to \$224,000 for the three months ended March 31, 2013.

- o The Company created a 3D visualization team in January 2011 to develop 3D technology to add to our training programs. The Company incurred \$56,000 and \$114,000 of costs related to this effort in the three months ended March 31, 2013 and 2012, respectively.
- o Our EnVision product line is working on several new products mainly related to a gas-oil separation process and an upstream amine treatment unit. EnVision incurred \$133,000 and \$39,000 of development expense for the three months ended March 31, 2013 and 2012, respectively.
- o Spending on other software product development totaled \$533,000 and \$517,000 for the three and months ended March 31, 2013 and 2012, respectively. The Company's development expenses were mainly related to two projects, an enhanced graphical user interface for our JADE™ modeling toolset, and our configuration management system, ISIS™, which is a central data warehouse that supports various forms of data on a simulator.

Depreciation. Depreciation expense totaled \$153,000 and \$137,000 during the three months ended March 31, 2013 and 2012, respectively.

Amortization of definite-lived intangible assets. Amortization expense related to definite-lived intangible assets totaled \$52,000 and \$78,000 for the three months ended March 31, 2013 and 2012, respectively.

Operating Income (Loss). The Company had an operating loss of (\$1.3 million) (10.4% of revenue) during the three months ended March 31, 2013, as compared with operating income of \$218,000 (1.6% of revenue) for the same period in 2012. The variances were due to the factors outlined above.

Interest Income, Net. Net interest income totaled \$39,000 and \$51,000 for the three months ended March 31, 2013 and 2012, respectively.

Gain on Derivative Instruments, Net. The Company periodically enters into forward foreign exchange contracts to manage market risks associated with the fluctuations in foreign currency exchange rates on foreign-denominated trade receivables. As of March 31, 2013, the Company had foreign exchange contracts outstanding of approximately 0.8 million Pounds Sterling, 17.1 million Euro, and 62.1 million Japanese Yen at fixed rates. The contracts expire on various dates through May 2016. The Company has not designated the contracts as hedges and has recognized a gain on the change in the estimated fair value of the contracts of \$549,000 for the three months ended March 31, 2013.

As of March 31, 2012, the Company had foreign exchange contracts outstanding of approximately 2.4 million Pounds Sterling, 13.7 million Euro, and 378.6 million Japanese Yen at fixed rates. The contracts expire on various dates through May 2016. The Company had not designated the contracts as hedges and recognized a gain on the change in the estimated fair value of the contracts of \$186,000 for the three months ended March 31, 2012.

The foreign currency denominated contract receivables, billings in excess of revenue earned, and subcontractor accruals that are related to the outstanding foreign exchange contracts were remeasured into the functional currency using the current exchange rate at the end of the period. For the three months ended March 31, 2013, the Company recognized a loss of (\$282,000) from the remeasurement of such contract receivables, billings in excess of revenue earned and subcontractor accruals. For the same period in 2012, the Company recognized a gain of \$214,000.

Other Income (Expense), net. For the three months ended March 31, 2013, other expense, net was (\$105,000). For the three months ended March 31, 2012, other income, net was \$86,000. The major components of other income (expense), net included the following items:

- ◆ For the three months ended March 31, 2013, the Company recognized a loss of (\$114,000) relating to its pro rata share of operating results from GSE-UNIS Simulation Technology Co., Ltd. For the three months ended March 31, 2012, the Company recognized a gain of \$62,000 relating to its pro rata share of operating results from GSE-UNIS Simulation Technology Co., Ltd.
- ◆ The Company had other miscellaneous income for the three months ended March 31, 2013 of \$9,000. For the three months ended March 31, 2012, other miscellaneous income amounted to \$24,000.

Provision for Income Taxes.

The Company files in the United States federal jurisdiction and in several state and foreign jurisdictions. Because of the net operating loss carryforwards, the Company is subject to U.S. federal and state income tax examinations from years 1997 and forward and is subject to foreign tax examinations by tax authorities for years 2006 and forward. Open tax years related to state and foreign jurisdictions remain subject to examination but are not considered material to our financial position, results of operations or cash flows.

An uncertain tax position taken or expected to be taken in a tax return is recognized in the financial statements when it is more likely than not (i.e., a likelihood of more than fifty percent) that the position would be sustained upon examination by tax authorities that have full knowledge of all relevant information. A recognized tax position is then measured at the largest amount of benefit that is greater than fifty percent likely of being realized upon ultimate settlement. Interest and penalties related to income taxes are accounted for as income tax expense.

The Company expects to pay income taxes in the United Kingdom, India, and China in 2013. In 2012, the Company paid income taxes to Sweden, India, and China. The Company has a full valuation allowance on its U.S. net deferred tax assets at March 31, 2013.

Liquidity and Capital Resources

As of March 31, 2013, the Company's cash and cash equivalents totaled \$18.7 million compared to \$22.4 million at December 31, 2012.

Cash used in operating activities. For the three months ended March 31, 2013, net cash used in operations totaled \$2.1 million. Significant changes in the Company's assets and liabilities in the three months ended March 31, 2013 included:

- ◆ A \$543,000 decrease in the Company's contract receivables. The Company's trade receivables, net of the allowance for doubtful accounts, decreased from \$12.4 million at December 31, 2012 to \$11.0 million at March 31, 2013. At March 31, 2013, trade receivables outstanding for more than 90 days, net of the bad debt reserve, totaled approximately \$2.9 million versus \$2.5 million at December 31, 2012. The Company's unbilled receivables increased by approximately \$600,000 to \$11.9 million at March 31, 2013. The increase in the unbilled receivables is due to the timing of contracted billing milestones of the Company's current projects. In April 2013, the Company invoiced \$3.7 million of the unbilled amounts; the balance is expected to be invoiced and collected within one year.
- ◆ A \$1.5 million decrease in billings in excess of revenue earned. The increase was due to the timing of contracted billing milestones of the Company's projects.

Net cash used in operations for the three months ended March 31, 2012, totaled \$2.5 million. Significant changes in the Company's assets and liabilities in the three months ended March 31, 2012 included:

- ◆ A \$2.5 million increase in the Company's contract receivables. The Company's trade receivables, net of the allowance for doubtful accounts, increased from \$8.1 million at December 31, 2011 to \$12.8 million at March 31, 2012. At March 31, 2012, trade receivables outstanding for more than 90 days, net of the bad debt reserve, totaled approximately \$1.2 million versus \$278,000 at December 31, 2011. The Company's unbilled receivables decreased by approximately \$2.0 million to \$10.2 million at March 31, 2012. The decrease in the unbilled receivables was due to the timing of contracted billing milestones of the Company's current projects.
- ◆ A \$1.0 million decrease in accounts payable, accrued compensation and accrued expenses. The decrease was due to the timing of payments made by the Company to vendors and subcontractors, as well as payments made to employees and management for bonuses and excess vacation payouts during the three months ended March 31, 2012.

Cash used in investing activities. Net cash used in investing activities totaled \$628,000 for the three months ended March 31, 2013. During the three months ended March 31, 2013, the Company did not make any contributions to GSE-UNIS Simulatoon Technology Co, Ltd. ("GSE-UNIS"). GSE-UNIS is 51% owned by Beijing UNIS Investment Co., Ltd. and 49% owned by GSE.

Capitalized expenditures totaled \$131,000 and capitalized software development costs totaled \$497,000 for the three months ended March 31, 2013.

Net cash used in investing activities totaled \$785,000 for the three months ended March 31, 2012. During the three months ended March 31, 2012, the Company made its final equity contribution of \$469,000 to GSE-UNIS.

Capital expenditures totaled \$350,000 and capitalized software development costs totaled \$269,000 for the three months ended March 31, 2012. Cash provided by the release of cash as collateral under letters of credit totaled \$305,000 for the three months ended March 31, 2012.

Cash used in financing activities. Net cash used in financing activities totaled \$944,000 for the three months ended March 31, 2013. During the three months ended March 31, 2013, the Company made payments of \$979,000 in relation to the liability classified contingent-consideration associated with the acquisition of EnVision. The Company repurchased 1,100 shares of the Company's common stock at an aggregate cost of \$2,000 for the three months ended March 31, 2013. Proceeds from the issuance of common stock for the three months ended March 31, 2013 totaled \$37,000.

For the three months ended March 31, 2012, net cash used in financing activities totaled \$93,000. The Company repurchased 162,387 shares of the Company's common stock at an aggregate cost of \$303,000 for the three months ended March 31, 2012. Proceeds from the issuance of common stock for the three months ended March 31, 2012 totaled \$210,000.

At March 31, 2013, the Company had cash and cash equivalents of \$18.7 million. The Company believes that its (i) cash and cash equivalents and (ii) cash generated from normal operations will be sufficient to fund its working capital and other requirements for at least the next twelve months.

Credit Facilities

The Company has a Master Loan and Security Agreement and Revolving Credit Note with Susquehanna. The Company and its subsidiaries, GSE Power Systems, Inc., and GSE EnVision LLC, are jointly and severally liable as co-borrowers. The Loan Agreement provides a \$7.5 million revolving line of credit for the purpose of (i) issuing stand-by letters of credit and (ii) providing working capital. Working capital advances bear interest at a rate equal to the Wall Street Journal Prime Rate of Interest, floating with a floor of 4 ½%. The two-year agreement expires on November 1, 2013.

As collateral for the Company's obligations, the Company granted a first lien and security interest in all of the assets of the Company, including but not limited to, accounts receivable, inventory, proceeds and products, intangibles, trademarks, intellectual property, and machinery and equipment.

Issuances of stand-by letters of credit and advances of working capital (collectively referred to as the "Advances") require that the Company maintain a minimum cash balance of \$3.0 million at all times (the "Cash Balance Requirement"). The Cash Balance Requirement will remain at the minimum amount as long as the Company's quarterly consolidated net income (exclusive of gains and losses on derivative instruments and stock option expense) as defined ("Net Income"), remains positive and the Company is in compliance with the covenants. If the Company's quarterly Net Income is negative or the Company is not in compliance with the covenants, the Cash Balance Requirement will revert to the amount of the Advances, until the Company attains positive Net Income for two consecutive quarters. The credit agreements contain certain restrictive covenants regarding future acquisitions, and incurrence of debt. In addition, the credit agreements contain financial covenants with respect to the Company's cash flow coverage ratio, minimum tangible capital base, quick ratio, and tangible capital base ratio. At March 31, 2013, the Company had not paid any interest or principal payments related to any borrowings for over one year. As such the cash flow coverage ratio is not applicable at March 31, 2013.

	Covenant	As of March 31, 2013
Minimum tangible capital base	Must Exceed \$26.0 million	\$31.9 million

Edgar Filing: GSE SYSTEMS INC - Form 10-Q

Quick ratio	Must Exceed 2.00	2.59 : 1.00
	: 1.00	
Tangible capital base ratio	Not to Exceed .75	.58 : 1.00
	: 1.00	

As the Company's Net Income for the three months ended March 31, 2013 as defined above was negative, the Company will currently be required to maintain a cash balance of \$3.7 million at Susquehanna which is equivalent to the amount of Advances at March 31, 2013. All of the Company's outstanding Advances as of March 31, 2013 consisted of stand-by letters of credit.

As of March 31, 2013, the Company was contingently liable for sixteen standby letters of credit and five surety bonds totaling \$6.6 million which represent performance and bid bonds on sixteen contracts. The Company has deposited the full value of six standby letters of credit in certificates of deposit and escrow accounts (\$1.8 million) which have been restricted in that the Company does not have access to these funds until the related letters of credit have expired. The cash has been recorded on the Company's balance sheet at March 31, 2013 as restricted cash.

Item 3. Quantitative and Qualitative Disclosure about Market Risk

The Company's market risk is principally confined to changes in foreign currency exchange rates. The Company's exposure to foreign exchange rate fluctuations arises in part from customer contracts that are denominated in currencies other than the Company's functional currency as well as from inter-company accounts in which costs incurred in one entity are charged to other entities in different foreign jurisdictions. The Company is also exposed to foreign exchange rate fluctuations as the financial results of all foreign subsidiaries are translated into U.S. dollars in consolidation. As exchange rates vary, those results when translated may vary from expectations and adversely impact overall expected profitability.

The Company utilizes forward foreign currency exchange contracts to manage market risks associated with the fluctuations in foreign currency exchange rates. The principal currencies for which such forward exchange contracts are entered into are the Pound Sterling, the Euro and the Japanese Yen. It is the Company's policy to use such derivative financial instruments to protect against market risk arising in the normal course of business in order to reduce the impact of these exposures. The Company minimizes credit exposure by limiting counterparties to nationally recognized financial institutions.

As of March 31, 2013, the Company had foreign exchange contracts outstanding of approximately 0.8 million Pounds Sterling, 17.1 million Euro, and 62.1 million Japanese Yen at fixed rates. The contracts expire on various dates through May 2016. The Company had not designated the contracts as hedges and has recognized a gain on the change in the estimated fair value of the contracts of \$549,000 for the three months ended March 31, 2013. A 10% fluctuation in the foreign currency exchange rates up or down as of March 31, 2013 would have increased/decreased the change in the estimated fair value of the contracts by \$52,000.

As of March 31, 2012, the Company had foreign exchange contracts outstanding of approximately 2.4 million Pounds Sterling, 13.7 million Euro, and 378.6 million Japanese Yen at fixed rates. The contracts expire on various dates through May 2016. The Company had not designated the contracts as hedges and has recognized a gain on the change in the estimated fair value of the contracts of \$186,000 for the three months ended March 31, 2012. A 10% fluctuation in the foreign currency exchange rates up or down as of March 31, 2012 would have increased/decreased the change in the estimated fair value of the contracts by \$36,000.

Item 4. Controls and Procedures

(a) Evaluation of Disclosure Controls and Procedures

The Company maintains disclosure controls and procedures that are designed to ensure that information required to be disclosed by it in its reports filed or submitted pursuant to the Securities Exchange Act of 1934, as amended (the "Exchange Act"), is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission's rules and forms and that information required to be disclosed by the Company in its Exchange Act reports is accumulated and communicated to management, including the Company's Chief Executive Officer ("CEO"), who is its principal executive officer, and Chief Financial Officer ("CFO"), who is its principal financial officer, to allow timely decisions regarding required disclosure. At the end of the period covered by this report, an evaluation was performed under the supervision and with the participation of our management including our CEO and our CFO, of the effectiveness of the design and operation of our disclosure controls and

procedures pursuant to Rule 13-15(e) of the Exchange Act. Based on the evaluation of our disclosure controls and procedures as of March 31, 2013, our Chief Executive Officer and Chief Financial Officer concluded that, as of such date, our disclosure controls and procedures were not effective because of the material weakness identified below.

(b) Changes in internal control

Management is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Rule 13a-15(f) under the Exchange Act. Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with U.S GAAP. The effectiveness of any system of internal control over financial reporting is subject to inherent limitations, including the exercise of judgment in designing, implementing, operating and evaluating the controls and procedures. Because of these inherent limitations, internal control over financial reporting cannot provide absolute assurance regarding the reliability of financial reporting and the preparation of financial statements in accordance with U.S. GAAP and may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that internal controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

A “material weakness” as defined by Public Company Accounting Oversight Board (“PCAOB”) Auditing Standard No. 5, “An Audit of Internal Control over Financial Reporting That is Integrated with an Audit of Financial Statements” (“Auditing Standard No. 5”) is “a deficiency, or a combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of the annual or interim financial statements will not be prevented or detected on a timely basis.” A “deficiency” in internal control over financial reporting as defined by Auditing Standard No. 5 “exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect misstatements on a timely basis.” We believe that the following is a material weakness in our internal control over financial reporting.

In 2012, the Company implemented a new system for financial reporting and accumulation of financial data. The new financial system is a significant component of the Company’s internal control over financial reporting, but was not adopted in response to any deficiency in our internal controls. As of March 31, 2013, we had not completed the evaluation of the completeness, design and operating effectiveness of the internal controls over the new financial system. As a result of this material weakness in our internal control over financial reporting, we performed additional review and analysis over our consolidated financial statements for the three months ended March 31, 2013. As a result of these procedures, we believe that our consolidated financial statements are presented in accordance with U.S GAAP. We anticipate that we will complete an evaluation of the completeness, design, and operating effectiveness of the internal controls over our financial system in the third quarter 2013.

Because of the material weakness described above, management has concluded that we did not maintain effective internal control over financial reporting during the three months ended March 31, 2013, based on the “Internal Control – Integrated Framework” issued by COSO. However, we believe these additional procedures were sufficient to provide a basis for management’s certifying that the financial statements presented in this Report are presented fairly, in all material respects, in accordance with GAAP.

(c) Changes in Internal Control over Financial Reporting

There were no changes in the Company’s internal control over financial reporting that occurred during the most recent fiscal quarter that have materially affected or are reasonably likely to materially affect the Company’s internal control over financial reporting.

(d) Limitation of Effectiveness of Controls

Internal control over financial reporting has inherent limitations. Internal control over financial reporting is a process that involves human diligence and compliance and is subject to lapses in judgment and breakdowns resulting from human failures. Internal control over financial reporting also can be circumvented by collusion or improper management override. Because of such limitations, there is a risk that material misstatements will not be prevented or detected on a timely basis by internal control over financial reporting. However, these inherent limitations are known features of the financial reporting process. Therefore, it is possible to design into the process safeguards to reduce, though not eliminate this risk.

PART II - OTHER INFORMATION

Item 1. Legal Proceedings

None.

Item 1A. Risk Factors

The Company has no material changes to the disclosure on this matter made in its Annual Report on Form 10-K for the fiscal year ended December 31, 2012.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

Issuer Purchases of Equity Securities

The following table provides information about the Company's share repurchase activity for the three months ended March 31, 2013:

Month	Total number of shares purchased	Average price paid per share	Total number of shares purchased as part of publicly announced program	Approximate dollar value of shares that may yet be purchased under the program
January 1 - January 31	-	\$ -	1,104,487	\$ 819,773
February 1 - February 28	-	\$ -	1,104,487	\$ 819,773
March 1 - March 31	1,100	\$ 2.00	1,105,587	\$ 817,574

Item 3. Defaults Upon Senior Securities

None

Item 4. Mine Safety Disclosures

Not applicable.

Item 5. Other Information

None

Item 6. Exhibits

- 31.1 Certification of the Chief Executive Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002, filed herewith.
- 31.2 Certification of the Chief Financial Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002, filed herewith.
- 32.1 Certification of the Chief Executive Officer and Chief Financial Officer pursuant to Section 906 of the Sarbanes-Oxley Act of 2002, filed herewith.
