**Delaware**

(State or other jurisdiction of  
incorporation or organization)

**500 North Field Drive**

**Lake Forest, IL**

(Address of principal executive offices)

**76-0515284**

(I.R.S. Employer  
Identification No.)

**60045**

(Zip Code)

Registrant's telephone number, including area code: (847) 482-5000

Securities registered pursuant to Section 12(b) of the Act:

**Title of each class**

**Name of each Exchange  
on which registered**

Common Stock, par value \$.01 per share

New York and Chicago Stock Exchanges

Securities registered pursuant to Section 12(g) of the Act: None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes  No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes  No

*Note* Checking the box above will not relieve any registrant required to file reports pursuant to Section 13 or 15(d) of the Exchange Act from their obligations under those Sections.

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes  No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements

incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K. ii

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes  No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of large accelerated filer, accelerated filer and smaller reporting company in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer  Accelerated filer  Non-accelerated filer  Smaller reporting company   
(Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes  No

State the aggregate market value of the voting and non-voting common equity held by non-affiliates computed by reference to the price at which the common equity was last sold, or the average bid and asked price of such common equity, as of the last business day of the registrant's most recently completed second fiscal quarter.

**CAUTIONARY STATEMENT FOR PURPOSES OF THE SAFE HARBOR PROVISIONS OF THE PRIVATE SECURITIES LITIGATION REFORM ACT OF 1995**

This Annual Report contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995 concerning, among other things, our prospects and business strategies. These forward-looking statements are included in various sections of this report, including the section entitled Outlook appearing in Item 7 of this report. The words may, will, believe, should, could, plan, expect, anticipate, estimate, and similar (and variations thereof), identify these forward-looking statements. Although we believe that the expectations reflected in these forward-looking statements are based on reasonable assumptions, these expectations may not prove to be correct. Because these forward-looking statements are also subject to risks and uncertainties, actual results may differ materially from the expectations expressed in the forward-looking statements. Important factors that could cause actual results to differ materially from the expectations reflected in the forward-looking statements include:

general economic, business and market conditions, including without limitation any deterioration in the global economic environment, including the potential impact thereof on labor unrest, supply chain disruptions, weakness in demand and the collectability of any accounts receivable due to us;

our ability to source and procure needed materials, components and other products and services in accordance with customer demand and at competitive prices;

changes in capital availability or costs, including increases in our cost of borrowing (i.e., interest rate increases), the amount of our debt, our ability to access capital markets at favorable rates, and the credit ratings of our debt;

changes in consumer demand, prices and our ability to have our products included on top selling vehicles, including any shifts in consumer preferences away from light trucks, which tend to be higher margin products for our customers and us, to other lower margin vehicles, for which we may or may not have supply contracts, and other factors impacting the cyclical nature of automotive and commercial vehicle production and the sales of such vehicles which include our products, and the potential negative impact on our revenues and margins from such products;

changes in automotive and commercial vehicle manufacturers' production rates and their actual and forecasted requirements for our products, such as the significant production cuts during 2008 and 2009 by automotive manufacturers in response to difficult economic conditions;

the overall highly competitive nature of the automobile and commercial vehicle parts industry, and any resultant inability to realize the sales represented by our awarded book of business (which is based on anticipated pricing and volumes for the applicable program over its life, and is subject to increases or decreases due to changes in customer requirements, customer and consumer preferences, and the number of vehicles actually produced by customers);

the loss of any of our large original equipment manufacturer (OEM) customers (on whom we depend for a substantial portion of our revenues), or the loss of market shares by these customers if we are unable to achieve increased sales to other OEMs;

industrywide strikes, labor disruptions at our facilities or any labor or other economic disruptions at any of our significant customers or suppliers or any of our customers' other suppliers (such as the 2008 strike at American Axle, which disrupted our supply of products for significant General Motors platforms);

increases in the costs of raw materials, including our ability to successfully reduce the impact of any such cost increases through materials substitutions, cost reduction initiatives, low cost country sourcing, and price recovery efforts with aftermarket and OE customers;

the cyclical nature of the global vehicle industry, including the performance of the global aftermarket sector and the longer product lives of vehicle parts;

our ability to successfully execute cash management, restructuring and other cost reduction plans and to realize anticipated benefits from these plans;

**Table of Contents**

costs related to product warranties and other customer satisfaction actions;

the impact of consolidation among vehicle parts suppliers and customers on our ability to compete;

changes in distribution channels or competitive conditions in the markets and countries where we operate, including the impact of changes in distribution channels for aftermarket products on our ability to increase or maintain aftermarket sales;

the negative impact of higher fuel prices on transportation and logistics costs, raw material costs and discretionary purchases of vehicles or aftermarket products;

the cost and outcome of existing and any future legal proceedings, including, but not limited to, proceedings against us or our customers relating to intellectual property rights;

economic, exchange rate and political conditions in the countries where we operate or sell our products;

customer acceptance of new products;

new technologies that reduce the demand for certain of our products or otherwise render them obsolete;

our ability to realize our business strategy of improving operating performance;

our ability to successfully integrate any acquisitions that we complete and effectively manage our joint ventures and other third-party partnerships;

changes by the Financial Accounting Standards Board or the Securities and Exchange Commission of authoritative generally accepted accounting principles or policies;

changes in accounting estimates and assumptions, including changes based on additional information;

potential legislation, regulatory changes and other governmental actions, including the ability to receive regulatory approvals and the timing of such approvals, as well as any changes by International Standards Organization (ISO), Technical Specifications (TS) and other such committees in their certification processes for processes and products, which may have the effect of delaying or hindering our ability to bring new products to market;

the impact of changes in and compliance with laws and regulations, including environmental laws and regulations, which may result in our incurrence of environmental liabilities in excess of the amount reserved, the adoption of the current mandated timelines for worldwide emission regulation, which could impact the demand for certain of our products, and any changes to the timing of the funding requirements for our pension and other postretirement benefit liabilities;

decisions by federal, state and local governments to provide (or discontinue) incentive programs related to automobile or other vehicle purchases;

the potential impairment in the carrying value of our long-lived assets and goodwill or our deferred tax assets;

potential volatility in our effective tax rate;

acts of war and/or terrorism, as well as actions taken or to be taken by the United States and other governments as a result of further acts or threats of terrorism, and the impact of these acts on economic, financial and social conditions in the countries where we operate; and

the timing and occurrence (or non-occurrence) of other transactions, events and circumstances which may be beyond our control.

The risks included here are not exhaustive. Refer to Part I, Item 1A Risk Factors of this report for further discussion regarding our exposure to risks. Additionally, new risk factors emerge from time to time and it is not possible for us to predict all such risk factors, nor to assess the impact such risk factors might have on our business or the extent to which any factor or combination of factors may cause actual results to differ materially from those contained in any forward-looking statements. Given these risks and uncertainties, investors should not place undue reliance on forward-looking statements as a prediction of actual results.

**PART I**

**ITEM 1. BUSINESS.**

**TENNECO INC.**

**General**

Our company, Tenneco Inc., is one of the world's largest producers of emission control and ride control products and systems for light, commercial and specialty vehicle applications. Our company serves both original equipment vehicle manufacturers (OEMs) and the repair and replacement markets, or aftermarket, worldwide. As used herein, the term Tenneco, we, us, our, or the Company refers to Tenneco Inc. and its consolidated subsidiaries.

We were incorporated in Delaware in 1996. In 2005, we changed our name from Tenneco Automotive Inc. to Tenneco Inc. The name Tenneco better represents the expanding number of markets we serve through our commercial and specialty vehicle businesses. Building a stronger presence in these markets complements our core businesses of supplying ride control and emission control products and systems for light vehicles to automotive original equipment and aftermarket customers worldwide. Our common stock is traded on the New York Stock Exchange under the symbol TEN.

**Corporate Governance and Available Information**

We have established a comprehensive corporate governance plan for the purpose of defining responsibilities, setting high standards of professional and personal conduct and assuring compliance with such responsibilities and standards. As part of its annual review process, the Board of Directors monitors developments in the area of corporate governance. Listed below are some of the key elements of our corporate governance plan.

For more information about these matters, see our definitive Proxy Statement for the Annual Meeting of Stockholders to be held on May 18, 2011.

**Independence of Directors**

Seven of our nine directors are independent under the New York Stock Exchange (NYSE) listing standards.

Independent directors are scheduled to meet separately in executive session after every regularly scheduled Board of Directors meeting.

We have a lead independent director, Mr. Paul T. Stecko.

**Audit Committee**

All members meet the independence standards for audit committee membership under the NYSE listing standards and applicable Securities and Exchange Commission (SEC) rules.

Two members of the Audit Committee, Messrs. Charles Cramb and Dennis Letham, have been designated by the Board as audit committee financial experts, as defined in the SEC rules, and the remaining member of the Audit Committee satisfies the NYSE's financial literacy requirements.

The Audit Committee operates under a written charter which governs its duties and responsibilities, including its sole authority to appoint, review, evaluate and replace our independent auditors.

The Audit Committee has adopted policies and procedures governing the pre-approval of all audit, audit-related, tax and other services provided by our independent auditors.

## **Table of Contents**

### **Compensation/Nominating/Governance Committee**

All members meet the independence standards for compensation and nominating committee membership under the NYSE listing standards.

The Compensation/Nominating/Governance Committee operates under a written charter that governs its duties and responsibilities, including the responsibility for executive compensation.

We have an Executive Compensation Subcommittee which has the responsibility to consider and approve equity based compensation for our executive officers which is intended to qualify as performance based compensation under Section 162(m) of the Internal Revenue Code.

### **Corporate Governance Principles**

We have adopted Corporate Governance Principles, including qualification and independence standards for directors.

### **Stock Ownership Guidelines**

We have adopted Stock Ownership Guidelines to align the interests of our executives with the interests of stockholders and promote our commitment to sound corporate governance.

The Stock Ownership Guidelines apply to the independent directors, the Chairman and Chief Executive Officer, and all other officers with a rank of Senior Vice President or higher.

### **Communication with Directors**

The Audit Committee has established a process for confidential and anonymous submission by our employees, as well as submissions by other interested parties, regarding questionable accounting or auditing matters.

Additionally, the Board of Directors has established a process for stockholders to communicate with the Board of Directors, as a whole, or any independent director.

### **Codes of Business Conduct and Ethics**

We have adopted a Code of Ethical Conduct for Financial Managers, which applies to our Chief Executive Officer, Chief Operating Officer, Chief Financial Officer, Controller and other key financial managers. This code is filed as Exhibit 14 to this report.

We also operate under a Statement of Business Principles that applies to all directors, officers and employees and includes provisions ranging from restrictions on gifts to conflicts of interests. All salaried employees are required to affirm annually their acceptance of, and compliance with, these principles.

### **Related Party Transactions Policy**

We have adopted a Policy and Procedure for Transactions With Related Persons, under which our Board of Directors must generally pre-approve transactions involving more than \$120,000 with our directors, executive officers, five percent or greater stockholders and their immediate family members.

**Equity Award Policy**

We have adopted a written policy for all issuances by our company of compensatory awards in the form of our common stock or any derivative of the common stock.

**Table of Contents**

**Personal Loans to Executive Officers and Directors**

We comply with and operate in a manner consistent with the legislation outlawing extensions of credit in the form of a personal loan to or for our directors or executive officers.

Our Internet address is <http://www.tenneco.com>. We make our proxy statements, annual report to stockholders, annual report on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and amendments to those reports, as filed with or furnished to the SEC, available free of charge on our Internet website as soon as reasonably practicable after submission to the SEC. Securities ownership reports on Forms 3, 4 and 5 are also available free of charge on our website as soon as reasonably practicable after submission to the SEC. The contents of our website are not, however, a part of this report. All such statements and reports can also be found at the Internet site maintained by the SEC at <http://www.sec.gov>.

Our Audit Committee, Compensation/Nominating/Governance Committee and Executive Compensation Subcommittee Charters, Corporate Governance Principles, Stock Ownership Guidelines, Audit Committee policy regarding accounting complaints, Code of Ethical Conduct for Financial Managers, Statement of Business Principles, Policy and Procedures for Transactions with Related Persons, Equity Award Policy, policy for communicating with the Board of Directors and Audit Committee policy regarding the pre-approval of audit, non-audit, tax and other services are available free of charge on our website at [www.tenneco.com](http://www.tenneco.com). In addition, we will make a copy of any of these documents available to any person, without charge, upon written request to Tenneco Inc., 500 North Field Drive, Lake Forest, Illinois 60045, Attn: General Counsel. We intend to satisfy the disclosure requirements under Item 5.05 of Form 8-K and applicable NYSE rules regarding amendments to, or waivers of, our Code of Ethical Conduct for Financial Managers and Statement of Business Principles by posting this information on our website at [www.tenneco.com](http://www.tenneco.com).

**Table of Contents****CONTRIBUTIONS OF MAJOR BUSINESSES**

For information concerning our operating segments, geographic areas and major products or groups of products, see Note 11 to the consolidated financial statements of Tenneco Inc. included in Item 8. The following tables summarize for each of our reportable segments for the periods indicated: (i) net sales and operating revenues; (ii) earnings before interest expense, income taxes and noncontrolling interests ( EBIT ); and (iii) expenditures for plant, property and equipment. You should also read Management's Discussion and Analysis of Financial Condition and Results of Operations included in Item 7 for information about certain costs and charges included in our results.

**Table of Contents**

**DESCRIPTION OF OUR BUSINESS**

We design, manufacture and sell emission control and ride control systems and products for light, commercial and specialty vehicle applications, and generated revenues of \$5.9 billion in 2010. We serve both original equipment manufacturers (OEMs) and replacement markets worldwide through leading brands, including Monroe<sup>®</sup>, Rancho<sup>®</sup>, Clevite<sup>®</sup> Elastomers, Marzocchi<sup>®</sup> and Fric Rot<sup>™</sup> ride control products and Walker<sup>®</sup>, Fonos<sup>™</sup>, and Gillet<sup>™</sup> emission control products.

As a parts supplier, we produce individual component parts for vehicles as well as groups of components that are combined as modules or systems within vehicles. These parts, modules and systems are sold globally to most leading OEMs and throughout all aftermarket distribution channels.

**Overview of Automotive Parts Industry and Adjacent Markets**

The automotive parts industry is generally separated into two categories: (1) original equipment or OE in which parts are sold in large quantities directly for use by OEMs; and (2) aftermarket in which replacement parts are sold in varying quantities to a wide range of wholesalers, retailers and installers. In the OE market, parts suppliers are generally divided into tiers Tier 1 suppliers that provide their products directly to OEMs, and Tier 2 or Tier 3 suppliers that sell their products principally to other suppliers for combination into the other supplier's own product offerings.

Demand for automotive parts in the OE market is generally a function of the number of new vehicles produced, which in turn is a function of prevailing economic conditions and consumer preferences. In 2010, the number of light vehicles produced by region was 11.9 million in North America, 28.9 million in Europe, South America and India and 33.4 million in Asia Pacific. The term light vehicles is comprised of two groups: (1) passenger cars and (2) light trucks. When we refer to light trucks, we are including sport-utility vehicles (SUV), crossover vehicles (CUV), pick-up trucks, vans and multi-purpose passenger vehicles. Worldwide light vehicle production is forecasted to increase to 78.0 million units in 2011 from approximately 74.2 million units in 2010. Although OE demand is tied to planned vehicle production, parts suppliers also have the opportunity to grow through increasing their product content per vehicle, by further expanding business with existing customers and by serving new customers in existing or new markets. Companies with global presence and advanced technology, engineering, manufacturing and support capabilities, such as our company, are better positioned to take advantage of these opportunities.

These same competitive advantages have enabled suppliers such as us to serve customers beyond the light vehicle market. Certain automotive parts suppliers are now developing and producing components and integrated systems for the commercial market of medium- and heavy-duty trucks, buses, and non-road equipment as well as the recreational segment for two-wheelers and all-terrain vehicles. Tenneco foresees this market diversification as a source of future growth.

Demand for aftermarket products is driven by general economic conditions, the number of vehicles in operation, the age and distance driven of the vehicle fleet, and the average useful life and quality of vehicle parts. Although more vehicles are on the road than ever before, the aftermarket has experienced longer replacement cycles due to the improved quality of OE parts and increases in the average useful life of automotive parts as a result of technological innovation. Suppliers are increasingly being required to deliver innovative aftermarket products to drive increased aftermarket demand. Global economic downturns generally impact aftermarket sales less adversely than OE sales, as customers forego new vehicle purchases and keep their vehicles longer, thereby increasing demand for repair and maintenance services.

**Industry Trends**

Currently, we believe several significant existing and emerging trends are dramatically impacting the automotive industry and the other markets we serve. As the dynamics of the markets we serve change, so do

## **Table of Contents**

the roles, responsibilities and relationships of the participants. Key trends that we believe are affecting parts suppliers include:

### ***General Economic Factors and Production Levels***

The economic crisis in 2008 and 2009 materially and negatively impacted the automotive industry and our customers businesses in the U.S. and elsewhere. Automakers around the world experienced financial difficulties from a weakened economy, tightening credit markets, low consumer confidence, and reduced demand for their products. General Motors and Chrysler reorganized under bankruptcy protection in 2009, and other OE manufacturers took actions to improve profitability and remain solvent. The automotive supply base in turn also faced severe cash flow problems as a result of the significantly lower production levels of light vehicles, increased costs of certain raw materials, commodity and energy costs, and restricted access to additional liquidity through the capital markets. Consumers facing a weak job market and inadequate financing options were reluctant to purchase durable goods such as automobiles.

As a result of the lack of consumer confidence caused by the global economic downturn and credit market crisis, the industry experienced a rapid decline in light vehicle purchases in 2008 and the first half of 2009. The industry began to recover during the second half of 2009 when OE light vehicle production began to stabilize and then strengthen, tracking more closely to vehicle sales, and inventory levels began to be replenished. In 2010, light vehicle production continued to strengthen, evidenced by North America, Asia Pacific and Europe light vehicle production volumes increasing 39 percent, 30 percent and 15 percent, respectively in 2010 as compared to 2009.

### ***Increasing Environmental Standards***

OE manufacturers and their parts suppliers are designing and developing products to respond to increasingly stringent environmental requirements, growth in the diesel markets and increased demands for better fuel economy. Government regulations adopted over the past decade require substantial reductions in vehicle tailpipe emissions, longer warranties on parts of a vehicle's pollution control equipment and additional equipment to control fuel vapor emissions. Manufacturers are responding with new technologies for gasoline- and diesel-fueled vehicles that minimize pollution and improve fuel economy.

As a leading supplier of emission control systems with strong technical capabilities, we believe we are well positioned to benefit from the more rigorous environmental standards being adopted around the world. To meet stricter air quality regulations, we have developed and sold diesel particulate filters (DPFs) for the Mercedes Benz Sprinter and BMW 1 and 3 series passenger cars in Europe and for the GM Duramax engine applications, the Ford Super Duty, the Dodge Ram and International Truck and Engine Corporation's medium-duty trucks in North America. These particulate filters, coupled with converters, reduce emissions of particulate matter by up to 90 percent and of nitrogen oxide by up to 85 percent. In addition, we have development and production contracts for our selective catalytic reduction (SCR) systems with light and medium-duty truck manufacturers in North America, South America, Europe and Asia. In China, we have development contracts for complete turnkey SCR systems, including the ELIM-NOx<sup>®</sup> urea dosing technology acquired in 2007, now sold globally under the name XNOx<sup>™</sup>. Customers have also purchased prototypes of our hydrocarbon injector, a product acquired alongside the XNOx<sup>™</sup> technology, which is used to inject hydrocarbon directly into the exhaust system to regenerate diesel particulate filters and Lean NOx Traps. Lastly, for various non-road customers, we are developing emission aftertreatment systems designed to meet Tier 4A and Tier 4 Final environmental regulations.

### ***Increasing Technologically Sophisticated Content***

As consumers continue to demand vehicles with improved performance, safety and functionality at competitive prices, the components and systems in these vehicles become technologically more advanced and sophisticated. Mechanical functions are replaced with electronics; and mechanical and electronic devices are integrated into single systems. More stringent emission and other regulatory standards increase the complexity of the systems as well.

## **Table of Contents**

To remain competitive as a parts and systems supplier, we invest in engineering, research and development, spending \$117 million in 2010, \$97 million in 2009, and \$127 million in 2008, net of customer reimbursements. In addition, we build prototypes and incur other costs on behalf of our customers to further our technological capabilities. Such expenses reimbursed by our customers totaled \$109 million in 2010, \$104 million in 2009, and \$120 million in 2008. We also fund and sponsor university research to advance our emission control and ride control development.

By investing in technology, we can expand our product offerings and penetrate new markets. We developed DPFs which were first sold in Europe and then offered in North America. We co-developed with Öhlins Racing AB a continuously controlled electronic suspension system (CES) now offered by Volvo, Audi, Ford, VW and Mercedes Benz in their vehicles.

### ***Enhanced Vehicle Safety***

Vehicle safety and handling continue to gain increased industry attention and play a critical role in consumer purchasing decisions. The U.S. made electronic stability control (ESC) systems mandatory by 2012 with the adoption of the Federal Motor Vehicle Safety Standard 126 (FMVSS-126). OEMs, to serve the needs of their customers and meet government mandates, are seeking parts suppliers that invest in new technologies, capabilities and products that advance vehicle safety, such as roll-over protection systems, smart airbags, braking electronics, computerized electronic suspension and safer, more durable materials. Those suppliers able to offer such innovative products and technologies have a distinct competitive advantage.

Tenneco co-developed CES and offers Kinetic® ride control technology to improve vehicle stability and handling. We are also developing other advanced suspension systems like Actively Controlled Car (ACOCAR) that are being designed to provide improved vehicle safety and control. In addition to these efforts, we continue to promote the Safety Triangle of Steering-Stopping-Stability to educate consumers about the detrimental effect of worn shock absorbers on vehicle steering and stopping distances. Further, we introduced premium Monroe® branded brakes to the aftermarket to further complement our product offerings in the aftermarket space.

### ***Outsourcing and Demand for Systems and Modules***

OEMs have steadily outsourced more of the design and manufacturing of vehicle parts and systems to simplify the assembly process, lower costs and reduce development times. Furthermore, they have demanded fully integrated, functional systems made possible with the development of advanced electronics in addition to innovative, individual vehicle components and parts that may not readily interface together. As a result, successful parts suppliers offer a variety of component products individually as well as integrated modules and systems:

**Modules** are groups of component parts arranged in close physical proximity to each other within a vehicle. Modules are often assembled by the supplier and shipped to the OEM for installation in a vehicle as a unit. Integrated shock and spring units, seats, instrument panels, axles and door panels are examples.

**Systems** are groups of component parts located throughout a vehicle which operate together to provide a specific vehicle functionality. Emission control systems, anti-lock braking systems, safety restraint systems, roll control systems and powertrain systems are examples.

This shift towards fully integrated systems created the role of the Tier 1 systems integrator, a supplier responsible for executing a broad array of activities, including design, development, engineering, and testing of component parts, systems and modules. With more than a decade of experience as an established Tier 1 supplier, we have produced modules and systems for various vehicle platforms produced worldwide, supplying ride control modules for the GM Chevy Silverado, GM Sierra and the GM Malibu, Impala and Cruze and emission control systems for the Ford Super

Duty, Ford Focus, GM Chevy Silverado, GM Sierra, SmartForTwo, Opel Astra, and VW Passat and Golf. In addition, we continue to design other modules and systems for platforms yet to be introduced to the global marketplace.

## **Table of Contents**

### ***Global Reach of OE Customers***

Changing market dynamics are driving OE manufacturers and their parts suppliers to expand their global reach:

*Growing Importance of Developing Markets:* Because the North American and Western European automotive markets are relatively mature, OEMs are increasingly focusing on developing markets for growth opportunities, particularly Brazil, Russia, India and China, collectively known as the BRIC economies, as well as Thailand. As OEMs have penetrated new regions, growth opportunities for suppliers have emerged.

*Governmental Tariffs and Local Parts Requirements:* Many governments around the world require vehicles sold within their country to contain specified percentages of locally produced parts. Additionally, some governments place high tariffs on imported parts.

*Location of Production Closer to End Markets:* As OE manufacturers and parts suppliers have shifted production globally to be closer to their end markets, suppliers have expanded their reach, capturing sales in developing markets and taking advantage of relatively lower labor costs.

Because of these trends, OE manufacturers are increasingly seeking suppliers capable of supporting vehicle platforms being introduced globally. They want suppliers like Tenneco with design, production, engineering and logistics capabilities that can be accessed not just in North America and Europe but also in the developing markets.

### ***Global Rationalization of OE Vehicle Platforms***

OE manufacturers continue to standardize on global platforms, designing basic mechanical structures that are each suited for a number of similar vehicle models and able to accommodate different features for more than one region. Light vehicle platforms of over one million units are expected to grow from 42 percent to 50 percent of global OE production from 2010 to 2015.

With such global platforms, OE manufacturers realize significant economies of scale by limiting variations in items such as steering columns, brake systems, transmissions, axles, exhaust systems, support structures and power window and door lock mechanisms. The shift towards standardization can also benefit automotive parts suppliers. They can experience greater economies of scale, lower material costs, and reduced investment expenses for molds, dies and prototype development.

### ***Extended Product Life of Automotive Parts***

The average useful life of automotive parts, both OE and replacement, has been steadily increasing in recent years due to technological innovations. As a result, although there are more vehicles on the road than ever before, the global aftermarket has not kept pace with that growth. Accordingly, aftermarket suppliers have focused on reducing costs and providing product differentiation through advanced technology and recognized brand names. With our long history of technological innovation, brand awareness and operational effectiveness, we believe we are well positioned to leverage our products and technology.

### ***Changing Aftermarket Distribution Channels***

From 2000 to 2010, the number of retail outlets supplying aftermarket parts increased significantly while the number of jobber stores declined 12 percent in the U.S. Major aftermarket retailers, such as AutoZone and Advance Auto Parts, attempted to expand their commercial sales by selling directly to parts installers, which had historically purchased from their local warehouse distributors and jobbers, as they continued to market to individual retail

consumers. Retailers now have the option to offer premium brands which are often preferred by their commercial customers in addition to standard products which are often selected by their individual store buyers. We believe we are well positioned to respond to this trend because we continue to produce high-quality, premium brands and products. As distribution channels continue to consolidate, both wholesalers and

**Table of Contents**

retailers can realize the benefits of sourcing products from a supplier like Tenneco with our breadth of suspension and emissions control products.

**Contracting Supplier Base**

Over the past few years, as OEMs expanded geographically, pricing pressures grew and outsourcing increased, parts suppliers fought to remain competitive through consolidation, investing or restructuring to broaden their global reach, offering integrated products and services and gaining economies of scale. Additionally, a number of suppliers took significant restructuring actions or became insolvent, which has resulted in a substantial portion of the supply base's manufacturing capacity being taken out of the marketplace. We believe that a supplier's viability in this marketplace will depend, in part, on its ability to maintain and increase operating efficiencies, provide value-added services and secure a stable source of components and raw materials.

**Analysis of Revenues**

The table below provides, for each of the years 2008 through 2010, information relating to our net sales and operating revenues, by primary product lines and customer categories.

	<b>Net Sales</b>		
	<b>Year Ended December 31,</b>		
	<b>2010</b>	<b>2009</b>	<b>2008</b>
	<b>(Millions)</b>		
<b>Emission Control Systems &amp; Products</b>			
Aftermarket	\$ 318	\$ 315	\$ 358
Original Equipment			
OE Value-add	2,223	1,638	2,128
OE Substrate(1)	1,284	966	1,492
	3,507	2,604	3,620
	3,825	2,919	3,978
<b>Ride Control Systems &amp; Products</b>			
Aftermarket	851	721	761
Original Equipment	1,261	1,009	1,177
	2,112	1,730	1,938
Total Revenues	\$ 5,937	\$ 4,649	\$ 5,916

(1) See Management's Discussion and Analysis of Financial Condition and Results of Operations included in Item 7 for a discussion of substrate sales.

**Brands**

In each of our operating segments, we manufacture and market products with leading brand names. Monroe® ride control products and Walker® exhaust products are two of the most recognized brands in the industry. We emphasize product value differentiation with brands such as Monroe Sensa-Trac® and Reflex® (shock absorbers and struts), Quiet-Flow® (mufflers), DynoMax® (performance exhaust products), Rancho® (ride control products for the high performance light truck market), Clevite® Elastomers (elastomeric vibration control components), Marzocchi® (forks and suspensions for the two-wheeler market) and Lukey™ (performance exhaust and filters). In Europe, our Gillet™ brand is recognized as a leader in highly engineered exhaust systems for OE customers.

**Table of Contents****Customers**

We have developed long-standing business relationships with our customers around the world. In each of our operating segments, we work together with our customers in all stages of production, including design, development, component sourcing, quality assurance, manufacturing and delivery. With a diverse mix of OE and aftermarket products and facilities in major markets worldwide, we believe we are well positioned to meet customer needs. We believe we have a strong, established reputation with customers for providing high-quality products at competitive prices, as well as for timely delivery and customer service.

Worldwide we serve more than 64 different OEMs, and our products or systems are included on nine of the top 10 passenger models produced in Europe and nine of the top 10 light truck models produced in North America for 2010. During 2010, our OEM customers included:

**North America**

AM General  
Caterpillar  
Chrysler

## Volkswagen Group

The following customers accounted for 10 percent or more of our net sales in any of the last three years.

<b>Customer</b>	<b>2010</b>	<b>2009</b>	<b>2008</b>
General Motors	19%	16%	20%
Ford	13%	14%	11%

During 2010, our aftermarket customers were comprised of full-line and specialty warehouse distributors, retailers, jobbers, installer chains and car dealers. These customers included National Auto Parts Association (NAPA), Advance Auto Parts, Uni-Select, Pep Boys and O Reilly Automotive in North America, Temot

## **Table of Contents**

Autoteile GmbH, Autodistribution International, Group Auto Union, and Auto Teile Ring in Europe and Rede Presidente in South America. We believe our revenue mix is balanced, with our top 10 aftermarket customers accounting for 46 percent of our net aftermarket sales and our aftermarket sales representing 20 percent of our total net sales in 2010.

## **Competition**

We operate in highly competitive markets. Customer loyalty is a key element of competition in these markets and is developed through long-standing relationships, customer service, high quality value-added products and timely delivery. Product pricing and services provided are other important competitive factors.

In both the OE light vehicle market and aftermarket, we compete with the vehicle manufacturers, some of which are also customers of ours, and numerous independent suppliers. In the OE market, we believe that we rank among the top two suppliers in the markets we serve throughout the world for both emission control and ride control products and systems for light vehicles. In the aftermarket, we believe that we are the market share leader in the supply of both emission control and ride control products for light vehicles in the markets we serve throughout the world.

## **Seasonality**

Our OE and aftermarket businesses are somewhat seasonal. OE production is historically higher in the first half of the year compared to the second half. It decreases in the third quarter due to OE plant shutdowns; and softens in the fourth quarter due to reduced consumer demand for new vehicles during the holiday season and the winter months in North America and Europe generally. Our aftermarket operations, also affected by seasonality, experience relatively higher demand during the Spring as vehicle owners prepare for the Summer driving season.

While seasonality does impact our business, actual results may vary from the above trends due to global and local economic dynamics as well as industry-specific platform launches and other production-related events. During periods of economic recession, OE sales traditionally decline due to reduced consumer demand for automobiles and other capital goods. Aftermarket sales tend not to be as adversely affected during periods of economic downturn, as consumers forego new vehicle purchases and keep their vehicles longer, thereby increasing demand for repair and maintenance services. By participating in both the OE and aftermarket segments, we generally see a smaller revenue decline than the overall change in OE production.

During the recent global recession that began in 2008, seasonal OE plant closures were longer and more pronounced and aftermarket inventory levels remained leaner than normal. As the industry began to recover, the effects of seasonality were somewhat masked during the later half of 2009 through 2010, as OE sales and inventories improved from their depressed levels as consumers began spending again on the maintenance and repair of their vehicles.

## **Emission Control Systems**

Vehicle emission control products and systems play a critical role in safely conveying noxious exhaust gases away from the passenger compartment and reducing the level of pollutants and engine exhaust noise emitted to acceptable levels. Precise engineering of the exhaust system – extending from the manifold that connects an engine's exhaust ports to an exhaust pipe, to the catalytic converter that eliminates pollutants from the exhaust, and to the muffler that modulates noise and emissions – leads to a pleasant, tuned engine sound, reduced pollutants and optimized engine performance.

We design, manufacture and distribute a variety of products and systems designed to reduce pollution and optimize engine performance, acoustic tuning and weight, including the following:

Catalytic converters and diesel oxidation catalysts Devices consisting of a substrate coated with precious metals enclosed in a steel casing used to reduce harmful gaseous emissions, such as carbon monoxide;

**Table of Contents**

Diesel Particulate Filters (DPFs) Devices to capture and regenerate particulate matter emitted from diesel engines;

Burner systems Devices which actively combust fuel and air inside the exhaust system to create extra heat for DPF regeneration, or for improved efficiency of SCR systems;

Hydrocarbon vaporizers and injectors Devices to add fuel to a diesel exhaust system in order to regenerate diesel particulate filters or Lean NOx traps;

Lean NOx traps Devices which reduce Nitrogen Oxide (NOx) emissions from diesel powertrains using capture and store technology;

Selective Catalytic Reduction (SCR) systems Devices which reduce NOx emissions from diesel powertrains using injected reductants such as AdBlue™ or Diesel Exhaust Fluid (DEF);

Alternative NOx reduction technologies Devices which reduce NOx emissions from diesel powertrains, by using alternative reductants such as diesel fuel, E85 (85% ethanol, 15% gasoline), or solid ammonium carbamate;

Mufflers and resonators Devices to provide noise elimination and acoustic tuning;

Exhaust manifolds Components that collect gases from individual cylinders of a vehicle's engine and direct them into a single exhaust pipe;

Pipes Utilized to connect various parts of both the hot and cold ends of an exhaust system;

Hydroformed assemblies Forms in various geometric shapes, such as Y-pipes or T-pipes, which provide optimization in both design and installation as compared to conventional pipes;

Hangers and isolators Used for system installation and elimination of noise and vibration, and for the improvement of useful life; and

Aftertreatment control units Computerized electronic devices that utilize embedded software to regulate the performance of active aftertreatment system, including the control of sensors, injectors, vaporizers, pumps, heaters, valves, actuators, wiring harnesses, relays and other mechatronic components.

For the catalytic converters we sell, we either buy completed catalytic converters systems themselves or procure substrates coated with precious metals which we incorporate into entire systems. We obtain from third parties or directly from OE manufacturers these components and systems, often at the OEM's discretion. See Item 7,

Management's Discussion and Analysis of Financial Condition and Results of Operations for more information on our sales of these products.

We supply our emission control offerings to 41 vehicle makers for use on over 200 vehicle models, including five of the top 10 passenger cars produced in Europe and seven of the top 10 light truck models produced in North America for 2010. We also delivered emission control products to heavy-duty truck and specialty vehicle manufacturers including Harley-Davidson, BMW Motorcycle, Daimler Trucks, and International Truck and Engine Corporation (Navistar).

We entered the emission control market in 1967 with the acquisition of Walker Manufacturing Company, which was founded in 1888, and became one of Europe's leading OE emission control systems suppliers with the acquisition of Heinrich Gillet GmbH & Co. in 1994. Throughout this document, the term "Walker" refers to our subsidiaries and affiliates that produce emission control products and systems.

In the aftermarket, we manufacture, market and distribute replacement mufflers for virtually all North American, European, and Asian makes of light vehicles under brand names including Quiet-Flow<sup>®</sup>, Tru\_Fit<sup>®</sup> and Aluminox Pro<sup>™</sup>, in addition to offering a variety of other related products such as pipes and catalytic converters (Walker<sup>®</sup> Perfection). We also serve the specialty exhaust aftermarket with offerings that include Mega-Flow<sup>®</sup> exhaust products for heavy-duty vehicle applications and DynoMax<sup>®</sup> high performance exhaust

**Table of Contents**

products. We continue to emphasize product-value differentiation with other aftermarket brands such as Thrush® and Fonos™.

The following table provides, for each of the years 2008 through 2010, information relating to our sales of emission control products and systems for certain geographic areas:

	<b>Percentage of Net Sales Year Ended December 31,</b>		
	<b>2010</b>	<b>2009</b>	<b>2008</b>
<b>United States</b>			
Aftermarket	11%	17%	12%
OE market	89	83	88
	100%	100%	100%
<b>Foreign Sales</b>			
Aftermarket	7%	8%	8%
OE market	93	92	92
	100%	100%	100%

United States	39%	31%	32%
Foreign	61	69	68
	100%	100%	100%

**Ride Control Systems**

Superior ride control is governed by a vehicle's suspension system, including its shock absorbers and struts. Shock absorbers and struts serve to maintain the vertical loads placed on the vehicle's tires and thus, help keep the tires in contact with the road. A vehicle's ability to steer, brake, accelerate and operate safely depends on the contact between the vehicle's tires and the road. Worn shocks and struts can allow excess transfer of the vehicle's weight either from side to side which is called roll; from front to rear which is called pitch; or up and down, which is called bounce. Shock absorbers are designed to control the vertical loads placed on tires and thereby provide resistance to vehicle roll, pitch and bounce. They not only function as safety components but also provide a comfortable ride.

We design, manufacture and distribute a variety of ride control products and systems. Our ride control offerings include:

**Shock absorbers** A broad range of mechanical shock absorbers and related components for light- and heavy-duty vehicles, including twin-tube and monotube shock absorbers;

**Struts** A complete line of struts and strut assemblies for light vehicles;

Vibration control components (Clevite® Elastomers) Generally, rubber-to-metal bushings and mountings to reduce vibration between metal parts of a vehicle. Offerings include a broad range of suspension arms, rods and links for light- and heavy-duty vehicles;

Kinetic® Suspension Technology A suite of roll-control and nearly equal wheel-loading systems ranging from simple mechanical systems to complex hydraulic ones featuring proprietary and patented technology. The Kinetic® Suspension Technology was incorporated on the Citroën World Rally Car that was featured in the World Rally Championship 2003, 2004 and 2005. Additionally, the Kinetic® Suspension Technology was offered on the Lexus GX 470 sport utility vehicle which resulted in our winning the PACE Award;

Advanced suspension systems Shock absorbers and suspension systems that electronically adjust a vehicle's performance based on inputs such as steering and braking; and

**Table of Contents**

Other We also offer other ride control products such as load assist products, springs, steering stabilizers, adjustable suspension systems, suspension kits and modular assemblies.

We supply our ride control offerings to over 62 vehicle-makers for use on over 220 vehicle models, including five of the top 10 passenger cars produced in Europe and eight of the top 10 light truck models produced in North America for 2010. We also supply OE ride control products and systems to a range of heavy-duty and specialty vehicle manufacturers including Volvo Truck, Scania, International Truck and Engine Corporation (Navistar), and PACCAR.

In the ride control aftermarket, we manufacture, market and distribute replacement shock absorbers for virtually all North American, European and Asian makes of light vehicles under several brand names including Gas Matic®, Sensa-Trac®, Monroe Reflex® and Monroe Adventure™, as well as Clevite® Elastomers for elastomeric vibration control components. We also sell ride control offerings for the heavy-duty, non-road and specialty aftermarket, such as our Gas-Magnum® shock absorbers for the North American heavy-duty category and Marzocchi front forks for two-wheelers.

We entered the ride control product line in 1977 with the acquisition of Monroe Auto Equipment Company, which was founded in 1916, and introduced the world's first modern tubular shock absorber in 1930. When the term Monroe is used in this document it refers to our subsidiaries and affiliates that produce ride control products and systems.

The following table provides, for each of the years 2008 through 2010, information relating to our sales of ride control equipment for certain geographic areas:

	<b>Percentage of Net Sales Year Ended December 31,</b>		
	<b>2010</b>	<b>2009</b>	<b>2008</b>
<b>United States</b>			
Aftermarket	59%	60%	53%
OE market	41	40	47
	100%	100%	100%
<b>Foreign Sales</b>			
Aftermarket	30%	32%	32%
OE market	70	68	68
	100%	100%	100%
<b>Total Sales by Geographic Area</b>

Foreign	65	64	66
	100%	100%	100%

**Financial Information About Geographic Areas**

Refer to Note 11 of the consolidated financial statements of Tenneco Inc. included in Item 8 of this report for financial information about geographic areas.

### **Sales, Marketing and Distribution**

We have separate and distinct sales and marketing efforts for our OE and aftermarket businesses.

For OE sales, our sales and marketing team is an integrated group of professionals, including skilled engineers and program managers, who are organized by customer and product type (e.g., ride control and emission control). Our sales and marketing team provides the appropriate mix of operational and technical expertise needed to interface successfully with the OEMs. Our new business capture process involves working closely with the OEM platform engineering and purchasing teams. Bidding on OE automotive platforms typically encompasses many months of engineering and business development activity. Throughout

## **Table of Contents**

the process, our sales team, program managers and product engineers assist the OE customer in defining the project's technical and business requirements. A normal part of the process includes our engineering and sales personnel working on customers' integrated product teams, and assisting with the development of component/system specifications and test procedures. Given that the OE business involves long-term production contracts awarded on a platform-by-platform basis, our strategy is to leverage our engineering expertise and strong customer relationships to obtain platform awards and increase operating margins.

For aftermarket sales and marketing, our sales force is generally organized by customer and region and covers multiple product lines. We sell aftermarket products through four primary channels of distribution: (1) the traditional three-step distribution system of full-line warehouse distributors, jobbers and installers; (2) the specialty two-step distribution system of specialty warehouse distributors that carry only specified automotive product groups and installers; (3) direct sales to retailers; and (4) direct sales to installer chains. Our aftermarket sales and marketing representatives cover all levels of the distribution channel, stimulating interest in our products and helping our products move through the distribution system. Also, to generate demand for our products from end-users, we run print and television advertisements and offer pricing promotions. We were one of the first parts manufacturers to offer business-to-business services to customers with TA-Direct, an on-line order entry and customer service tool. In addition, we maintain detailed web sites for each of Walker<sup>®</sup>, Monroe<sup>®</sup>, Rancho<sup>®</sup>, DynoMax<sup>®</sup>, Monroe brake brands and our heavy-duty products.

## **Manufacturing and Engineering**

We focus on achieving superior product quality at the lowest operating costs possible and generally use state-of-the-art manufacturing processes to achieve that goal. Our manufacturing strategy centers on a lean production system designed to reduce overall costs, while maintaining quality standards and reducing manufacturing cycle time. In addition, we have implemented Six Sigma in our processes to minimize product defects and improve operational efficiencies. We deploy new technology to differentiate our products from our competitors and to achieve higher quality and productivity. We continue to adapt our capacity to customer demand, both expanding capabilities in growth areas as well as reallocating capacity away from demand segments in decline.

## ***Emission Control***

Our consolidated businesses operate 11 emission control manufacturing facilities in the U.S. and 45 emission control manufacturing facilities outside of the U.S. We operate 16 of these international manufacturing facilities through joint ventures in which we hold a controlling interest. We operate five emission control engineering and technical facilities worldwide and share two other such facilities with our ride control operations. In addition, three joint ventures in which we hold a noncontrolling interest operate a total of three manufacturing facilities outside the U.S.

Within each of our emission control manufacturing facilities, operations are organized by component (e.g., muffler, catalytic converter, pipe, resonator and manifold). Our manufacturing systems incorporate cell-based designs, allowing work-in-process to move through the operation with greater speed and flexibility. We continue to invest in plant and equipment to stay competitive in the industry. For instance, in our Smithville, Tennessee, OE manufacturing facility, we have developed a muffler assembly cell that utilizes laser welding. This allows for quicker change-over times in the process as well as less material used and less weight for the product. There is also a reduced cycle time compared to traditional joining and increased manufacturing precision for superior durability and performance. In 2007, we introduced the Measured and Matched Converter technique in North America. This allows us to maintain the optimum GBD (Gap Bulk Density) in our converter manufacturing operations with Tenneco proprietary processing. This process, coupled with cold spinning of the converter body, versus traditional cone to can welding, allows for more effective use of material through reduced welding, lower cost, and better performance of the product.

To strengthen our position as a Tier 1 OE systems supplier, we have developed some of our emission control manufacturing operations into just-in-time or JIT systems. In this system, a JIT facility located close to our OE customer's manufacturing plant receives product components from both our manufacturing

## **Table of Contents**

operations and independent suppliers, and then assembles and ships products to the OEMs on an as-needed basis. To manage the JIT functions and material flow, we have advanced computerized material requirements planning systems linked with our customers' and supplier partners' resource management systems. We have three emission control JIT assembly facilities in the United States and 22 throughout the rest of the world.

Our engineering capabilities include advanced predictive design tools, advanced prototyping processes and state-of-the-art testing equipment. These technological capabilities make us a full system integrator to the OEMs, supplying complete emission control systems from the manifold to the tailpipe, to provide full emission and noise control. We have expanded our engineering capabilities with the 2007 acquisition of Combustion Component Associates' ELIM-NO<sub>x</sub>®, mobile emission technology, now sold globally under the XNO<sub>x</sub><sup>™</sup> name, that includes urea and hydrocarbon injection, and electronic controls and software for selective catalytic reduction. We also offer a complete suite of alternative full system NO<sub>x</sub> aftertreatment technologies, including the Hydrocarbon Lean NO<sub>x</sub> Catalyst (HC-LNC) technology under joint development with General Electric, and SOLID-SCR<sup>™</sup> technology licensed from FEV, a Powertrain development and engineering company based in Germany. We have also developed advanced predictive engineering tools, including KBM&E (Knowledge Based Manufacturing & Engineering). The innovation of our KBM&E (which we call TEN-KBM&E) is a modular toolbox set of CAD embedded applications for manufacturing and engineering compliant design. The encapsulated TEN-KBM&E content is driven by an analytical method which continuously captures and updates the knowledge of our main manufacturing and engineering processes. Our global engineering capabilities are standardized through the use of the ATLAS Global PDM (Product data management) system, enabling a more efficient transfer of knowledge around the world.

### ***Ride Control***

Our consolidated businesses operate seven ride control manufacturing facilities in the U.S. and 23 ride control manufacturing facilities outside the U.S. We operate two of these international facilities through joint ventures in which we hold a controlling interest. We operate seven engineering and technical facilities worldwide and share two other such facilities with our emission control operations.

Within each of our ride control manufacturing facilities, operations are organized by product (e.g., shocks, struts and vibration control products) and include computer numerically controlled and conventional machine centers; tube milling and drawn-over-mandrel manufacturing equipment; metal inert gas and resistance welding; powdered metal pressing and sintering; chrome plating; stamping; and assembly/test capabilities. Our manufacturing systems incorporate cell-based designs, allowing work-in-process to move through the operation with greater speed and flexibility.

To strengthen our position as a Tier 1 OE module supplier, we have developed some of our manufacturing operations into JIT systems. We have three JIT ride control facilities outside the U.S.

In designing our shock absorbers and struts, we use advanced engineering and test capabilities to provide product reliability, endurance and performance. Our engineering capabilities feature advanced computer-aided design equipment and testing facilities. Our dedication to innovative solutions has led to such technological advances as:

Adaptive damping systems – adapt to the vehicle's motion to better control undesirable vehicle motions;

Electronically adjustable suspensions – change suspension performance based on a variety of inputs such as steering, braking, vehicle height, and velocity; and

Air leveling systems – manually or automatically adjust the height of the vehicle.

Conventional shock absorbers and struts generally compromise either ride comfort or vehicle control. Our innovative grooved-tube, gas-charged shock absorbers and struts provide both ride comfort and vehicle control, resulting in improved handling, reduced vibration and a wider range of vehicle control. This technology can be found in our premium quality Sensa-Trac® shock absorbers. We further enhanced this technology by adding the SafeTech™ fluon banded piston, which improves shock absorber performance and durability. We

## **Table of Contents**

introduced the Monroe Reflex<sup>®</sup> shock absorber, which incorporates our Impact Sensor<sup>™</sup> device. This technology permits the shock absorber to automatically switch in milliseconds between firm and soft compression damping when the vehicle encounters rough road conditions, thus maintaining better tire-to-road contact and improving handling and safety. We have also developed an innovative computerized electronic suspension system, which features dampers developed by Tenneco and electronic valves designed by Öhlins Racing AB. The continuously controlled electronic suspension ( CES ) ride control system is featured on Audi, Volvo, Ford, VW and Mercedes Benz vehicles.

### ***Quality Control***

Quality control is an important part of our production process. Our quality engineers establish performance and reliability standards in the product's design stage, and use prototypes to confirm that the component/system can be manufactured to specifications. Quality control is also integrated into the manufacturing process, with shop operators being responsible for quality control of their specific work product. In addition, our inspectors test work-in-progress at various stages to ensure components are being fabricated to meet customers' requirements.

We believe our commitment to quality control and sound management practices and policies is demonstrated by our successful participation in the International Standards Organization/Technical Specifications certification process ( ISO/TS ). ISO/TS certifications are semi-annual or annual audits that certify that a company's facilities meet stringent quality and business systems requirements. Without ISO or TS certification, we would not be able to supply our products for the aftermarket or the OE market, respectively, either locally or globally. All of our manufacturing facilities where we have determined that TS certification is required to serve our customers or would provide us with an advantage in securing additional business, have achieved ISO/TS 16949 certification.

### ***Business Strategy***

We strive to strengthen our global market position by designing, manufacturing, delivering and marketing technologically innovative emission control and ride control products and systems for OEMs and the aftermarket. We work toward achieving a balanced mix of products, markets and customers by capitalizing on emerging trends, specific regional preferences and changing customer requirements. We target both mature and developing markets for not just light vehicles, but also for commercial and specialty vehicles. We further enhance our operations by focusing on operational excellence in all functional areas.

The key components of our business strategy are described below:

#### ***Develop and Commercialize Advanced Technologies***

We develop and commercialize technologies that allow us to expand into new, fast-growing markets and serve our existing customers. By anticipating customer needs and preferences, we design advanced technologies that meet global market needs. For example, to meet the increasingly stringent emissions regulations being introduced around the world, we offer several technologies designed to reduce NOx emissions on passenger and commercial vehicles. This includes an integrated Selective Catalytic Reduction (SCR) system that incorporates our ELIM-NOx<sup>®</sup> technology, now sold globally under the name XNOx<sup>™</sup>. We also offer a NOx absorber and are developing a hydrocarbon lean NOx catalyst system and a solid urea SCR system to address NOx emissions. Additionally, we offer thermal management solutions, including our T.R.U.E.-Clean<sup>®</sup> active diesel particulate filter system.

We expect available content per vehicle to continue to rise over the next several years. Advanced aftertreatment exhaust systems will be required to comply with emissions regulations that affect light and commercial vehicles as well as non-road, locomotive and stationary engines. In addition, vehicle manufacturers, we believe, will offer greater comfort, handling and safety features by offering products such as electronic suspension and adjustable dampers. Our

Continuously Controlled Electronic Suspension (CES) shock absorbers are now sold to Volvo, Audi, Mercedes, VW, and Ford, among others, and our engineered elastomers to manufacturers with unique requirements. Our newest electronic suspension product DRiV™, licensed from Sturman Industries, is the first industry example of digital valves for ride control products, thereby offering faster response, lighter weight, and reduced power consumption compared to existing analog products.

## **Table of Contents**

We continue to focus on developing highly engineered systems and complex assemblies and modules designed to provide value-added solutions to customers and increase vehicle content generally. Having many of our engineering and manufacturing facilities integrated electronically, we believe, has helped our products continue to be selected for inclusion in top-selling vehicles. In addition, our just-in-time and in-line sequencing manufacturing processes and distribution capabilities have enabled us to be more responsive to our customers' needs.

### ***Penetrate Adjacent Markets***

We seek to penetrate a variety of adjacent markets and achieve growth in higher-margin businesses by applying our existing design, engineering and manufacturing capabilities. For example, we are aggressively leveraging our technology and engineering leadership in emission and ride control into adjacent markets for two wheelers, heavy-duty trucks, buses, agricultural equipment, construction machinery and other commercial and specialty vehicles. We are launching programs with 13 commercial vehicle customers for on- and non-road equipment in China, North America, Europe and South America. These customers include Caterpillar, for whom we are their global diesel emission control system integrator, as well as John Deere, Navistar, Deutz, China National Heavy Truck Company, Shanghai Diesel Engine Company, Weichai Power, FAW, and Guangxi Yuchai Machinery Company. We plan to announce four additional customers when we get approval to do so. Three of these customers are in South America where Brazil regulations change in 2012, and one is in China. Our 2010 revenue generated by our commercial and specialty vehicle business was 9 percent of our total OE revenue. In 2008, we added the ride control products and technologies of Gruppo Marzocchi to our existing exhaust systems business for two-wheelers. In addition, we are evaluating and selectively pursuing retrofit opportunities which will allow us to penetrate new markets or expand our products in existing markets.

### ***Expand in Developing Economies***

We continue to expand our global footprint into growth regions around the world. Recently, we opened wholly-owned emission control manufacturing facilities in Chennai, India and Guangzhou, China, and a ride control facility in Chonburi, Thailand. In addition, we opened new emission control facilities in Changchun, China and in Beijing, China as a result of our new joint venture agreements with FAW Sihuan and Beijing Hainachuan Automotive Part Company Limited, respectively. As OEMs have entered the fast-growing economies of Brazil, Russia, India, China, and Thailand, we have followed, building our capabilities to engineer and produce locally cost-competitive and cutting-edge products and capturing new business.

### ***Maintain Our Aftermarket Leadership***

We manufacture and market leading, brand-name products to a diversified and global aftermarket customer base. Two of the most recognized brand-name products in the automotive parts industry are our Monroe® ride control products and Walker® emission control products, which have been offered to consumers since the 1930s. We believe our brand equity in the aftermarket is a key asset especially as customers consolidate and channels of distribution converge.

We provide value differentiation by creating product extensions bearing our various brands. For example, we offer Monroe Reflex® and Monroe Sensa-Trac® shock absorbers, Walker Quiet-Flow® mufflers, Rancho® ride control products, DynoMax® exhaust products and Walker Ultra® catalytic converters, and in European markets, Walker and Aluminox Pro™ mufflers. Further, we introduced Monroe Springs™ and Monroe Magnum™ (bus and truck shock line) in Europe and Monroe Dynamics® and Monroe Ceramics® brake pads in the United States. We continue to explore other opportunities for developing new product lines that bear our existing, well-known brands.

We strive to gain market share in the aftermarket business by adding new product offerings and increasing our market coverage of existing brands and products. To this end, we offer an innovative, ride control product, the Quick-Strut®,

that combines the spring and the upper mount into a single, complete module and simplifies and shortens the installation process, eliminating the need for the special tools and skills required previously. We plan on adapting our products further for use in foreign nameplate vehicles with the introduction of

## **Table of Contents**

OESpectrum to our ride control line. We benefited from the consolidation of, and regional expansion by, our customers and gained business lost by competitors that encountered financial difficulties.

Our success in the aftermarket business strengthens our competitive position with OEMs. We gain timely market and product knowledge that can be used to modify and enhance our original equipment offerings for greater customer acceptance.

### ***Execute Focused Transactions***

We have successfully identified and capitalized on strategic acquisitions and alliances to achieve growth. Through these acquisitions and alliances, we have (1) expanded our product portfolio with complementary technologies; (2) realized incremental business from existing customers; (3) gained access to new customers; and (4) achieved leadership positions in geographic markets outside North America.

We developed a strategic alliance with Futaba, a leading exhaust manufacturer in Japan. We also created an alliance with Hitachi (as successor to Tokico Ltd. following its acquisition of Tokico), a leading Japanese ride control manufacturer. These alliances help us grow our business with Japan-based OEMs by leveraging the geographical reach of each partner to serve global vehicle platforms of these OEMs.

We positioned ourselves as a leading exhaust supplier in the rapidly growing Chinese market through majority-owned joint venture operations in Dalian and Shanghai. In June 2009, we formed a joint venture with Beijing Hainachuan Automotive Parts Company Limited in Beijing that will produce emission-control exhaust systems for Hyundai. In addition, we continue to serve North American and European OEMs located in China; we supply luxury cars produced by BMW and Audi through our joint venture with Eberspächer International GmbH, and we supply various Ford platforms through our joint venture with Chengdu Lingchuan Mechanical Plant. We established a local engineering center in Shanghai to develop automotive exhaust products when our joint venture with Shanghai Tractor and Engine Company, a subsidiary of Shanghai Automotive Industry Corp., was expanded. Also, we increased our stake from 60 percent to 80 percent in Tenneco Tongtai Exhaust Company Limited located in Dalian in January 2010 and formed a new joint venture in March 2010 with FAW Sihuan to supply emission control components and systems for passenger and commercial vehicles.

In February 2009, we signed a joint development agreement with GE Transportation, a unit of General Electric Company, to develop a proprietary SCR and aftertreatment technology designed to reduce and control diesel engine emissions for various transportation and other applications. We are collaborating with GE Transportation on the development and production of GE's Hydrocarbon Lean NO<sub>x</sub> catalyst technology (LNC), a diesel aftertreatment innovation aimed at reducing harmful nitrogen oxide (NO<sub>x</sub>) emissions as effectively as urea-based SCR systems. We are working with others on alternative urea SCR technologies, such as solid ammonium carbamate SCR.

We signed exclusive licensing agreements for T.R.U.E. Clean<sup>®</sup>, an exhaust aftertreatment technology used for automatic and active regeneration of Diesel Particulate Filters (DPFs), with Woodward Governor Company and for vaporizer technologies with another company. These technologies, which complement our array of existing emissions control products, allow us to provide integrated exhaust aftertreatment systems to commercial vehicle manufacturers and others.

We intend to continue to pursue strategic alliances, joint ventures, acquisitions and other transactions that complement or enhance our existing products, technology, systems development efforts, customer base and/or global presence. We will align with companies that have proven products, proprietary technology, advanced research capabilities, broad geographic reach, and/or strong market positions to further strengthen our product leadership, technological edge, international reach and customer relationships.

***Adapt Cost Structure to Economic Realities***

We aggressively respond to difficult economic environments, aligning our operations to any resulting reductions in production levels and replacement demand and executing comprehensive restructuring and cost-reduction initiatives. In the fourth quarter of 2008, we launched a global restructuring program that is

## **Table of Contents**

generating annual savings of about \$58 million since being fully implemented at the end of 2009. The restructuring program included actions to permanently reduce our fixed cost base and flex our costs, such as:

Permanently eliminating 1,100 jobs worldwide, which is in addition to 1,150 jobs previously eliminated in 2008;

Closing three North American manufacturing plants and an engineering facility in Australia;

Suspending matching contributions to employee 401(k) programs (which we reinstated in 2010); and

Cutting spending on information technology, sales and marketing programs.

During 2009, we further flexed our operations to address the market conditions, implementing temporary layoffs of hourly workers at our plants worldwide that were impacted by customers' plant shutdowns. We announced the closing of another manufacturing facility. In North America, where customer production cuts were the greatest, we also initiated salaried employee furloughs. In Europe, we eliminated all temporary positions and negotiated with various works councils to pursue similar cost reduction efforts including reduced work hours. We instituted cuts in salaries of at least 10 percent for salaried employees effective April 1, 2009, and implemented other actions to control employee costs. As economic and industry-wide conditions improved, we restored salaries to their prior levels effective October 1, 2009, and reinstated the employer matching contributions to the employee 401(k) plans for the year 2010.

In addition, we strategically reduced capital expenditures and engineering investments where possible without compromising our long-term growth prospects. We eliminated or postponed regional expansion projects, deferred spending tied to delayed customer launches, redeployed assets where feasible, and eliminated all discretionary capital spending. We focused on developing technologies and capabilities tied to business launching within the next two to three years, making exceptions in instances where the customer agreed to pay upfront for engineering and advance technology developments for programs launching in 2012 and beyond. In this way, we were able to continue all programs critical to our growth while limiting any near-term cash impact.

### ***Strengthen Operational Excellence***

We will continue to focus on operational excellence by optimizing our manufacturing footprint, enhancing our Six Sigma processes and Lean productivity tools, developing further our engineering capabilities, managing the complexities of our global supply chain to realize purchasing economies of scale while satisfying diverse and global requirements, and supporting our businesses with robust information technology systems. We will make investments in our operations and infrastructure as required to achieve our strategic goals. We will be mindful of the changing market conditions that might necessitate adjustments to our resources and manufacturing capacity around the world. We will remain committed to protecting the environment as well as the health and safety of our employees.

### **Environmental Matters**

We estimate that we and our subsidiaries will make expenditures for plant, property and equipment for environmental matters of approximately \$7 million in 2011 and \$3 million in 2012.

For additional information regarding environmental matters, see Item 3, Legal Proceedings, Item 7, Management's Discussion and Analysis of Financial Condition and Results of Operations—Environmental and Other Matters, Item 7, Management's Discussion and Analysis of Financial Condition and Results of Operations—Liquidity and Capital Resources and Note 12 to the consolidated financial statements of Tenneco Inc. included in Item 8.

**Employees**

As of December 31, 2010, we had approximately 22,000 employees of which approximately 50 percent were covered by collective bargaining agreements. European works councils cover 20 percent of our total employees, a majority of whom are also included under collective bargaining agreements. Several of our

**Table of Contents**

existing labor agreements in the United States and Mexico are scheduled for renegotiation in 2011. In addition, agreements are expiring in 2011 in Europe and South America covering plants in Spain, Poland, Portugal and Argentina. We regard our employee relations as satisfactory.

**Other**

The principal raw material that we use is steel. We obtain steel from a number of sources pursuant to various contractual and other arrangements. We believe that an adequate supply of steel can presently be obtained from a number of different domestic and foreign suppliers. From 2004 through 2008, we experienced higher steel prices which we addressed by evaluating alternative materials and processes, increasing component and assembly outsourcing to low cost countries and aggressively negotiating with our customers to allow us to recover these higher costs from them. As global economies continue to recover, we expect increasing price pressure on key commodities, including rubber, oil and steel.

We hold a number of domestic and foreign patents and trademarks relating to our products and businesses. We manufacture and distribute our products primarily under the Walker® and Monroe® brand names, which are well-recognized in the marketplace and are registered trademarks. We also sell certain of our emission control products to OE manufacturers under the names SOLID-SCR™ and XNOx™. The patents, trademarks and other intellectual property owned by or licensed to us are important in the manufacturing, marketing and distribution of our products.

**Table of Contents**

**ITEM 1A. RISK FACTORS.**

***Future deterioration or prolonged difficulty in economic conditions could have a material adverse impact on our business, financial position and liquidity.***

The economic crisis in 2008 and 2009 and the related worldwide financial industry turmoil resulted in a severe and global tightening of credit and liquidity. These conditions led to low consumer confidence, which resulted in delayed and reduced purchases of durable consumer goods such as automobiles. As a result, our OEM customers significantly reduced their production schedules. While light vehicle production has been increasing since the second half of 2009 and is forecasted to increase globally in 2011 as compared to 2010, production is still at low levels, particularly in the United States and Western Europe. We cannot assure you that production levels will continue to increase or that they may not decline. Future deterioration or prolonged difficulty in economic conditions could have a material adverse effect on our business, financial position and liquidity.

For example, as we saw in 2008 and 2009, disruptions in the financial markets may adversely impact the availability and cost of credit which could materially and negatively affect our company. Future disruptions in the capital and credit markets could adversely affect our customers and our ability to access the liquidity that is necessary to fund operations on terms that are acceptable to us or at all.

In addition, financial or other difficulties at any of our major customers could have a material adverse impact on us, including as a result of lost revenues, significant write offs of accounts receivable, significant impairment charges or additional restructurings beyond our current global plans. Severe financial or other difficulties at any of our major suppliers could have a material adverse effect on us if we are unable to obtain on a timely basis on similar economic terms the quantity and quality of components we require to produce our products.

Moreover, severe financial or operating difficulties at any automotive manufacturer or other supplier could have a significant disruptive effect on the entire automotive industry, leading to supply chain disruptions and labor unrest, among other things. These disruptions could force automotive manufacturers and, in turn, other suppliers, including us, to shut down production at plants. While the difficulties facing our customers and suppliers over the last several years have been primarily financial in nature, other difficulties, such as an inability to meet increased demand as the economy recovers, could also result in supply chain and other disruptions.

***Factors that reduce demand for our products or reduce prices could materially and adversely impact our financial condition and results of operations.***

Demand for and pricing of our products are subject to economic conditions and other factors present in the various domestic and international markets where the products are sold. Demand for our OE products is subject to the level of consumer demand for new vehicles that are equipped with our parts. The level of new light vehicle purchases is cyclical, affected by such factors as general economic conditions, interest rates and availability of credit, consumer confidence, patterns of consumer spending, fuel cost and the automobile replacement cycle. Consumer preferences also impact the demand for new light vehicle purchases. For example, if consumers increasingly prefer electric vehicles, demand for the vehicles equipped with our emission control products would decrease.

Demand for our aftermarket, or replacement, products varies based upon such factors as general economic conditions; the level of new vehicle purchases, which initially displaces demand for aftermarket products; the severity of winter weather, which increases the demand for certain aftermarket products; and other factors, including the average useful life of parts and number of miles driven.

The highly cyclical nature of the automotive industry presents a risk that is outside our control and that cannot be accurately predicted. Decreases in demand for automobiles and automotive products generally, or in the demand for our products in particular, could materially and adversely impact our financial condition and results of operations.

**Table of Contents**

***We are dependent on large customers for future revenue. The loss of all or a substantial portion of our sales to any of these customers or the loss of market share by these customers could have a material adverse impact on us.***

We depend on major vehicle manufacturers for a substantial portion of our net sales. For example, during fiscal year ended December 31, 2010, GM and Ford accounted for 19 percent and 13 percent of our net sales, respectively. The loss of all or a substantial portion of our sales to any of our large-volume customers could have a material adverse effect on our financial condition and results of operations by reducing cash flows and our ability to spread costs over a larger revenue base. We may make fewer sales to these customers for a variety of reasons, including but not limited to: (1) loss of awarded business; (2) reduced or delayed customer requirements; (3) strikes or other work stoppages affecting production by the customers; or (4) reduced demand for our customers' products.

In addition, our OE customers compete intensively against each other and other OE manufacturers. The loss of market share by any of our significant OE customers could have a material adverse effect on our business unless we are able to achieve increased sales to other OE manufacturers.

***We may be unable to realize sales represented by our awarded business, which could materially and adversely impact our financial condition and results of operations.***

The realization of future sales from awarded business is inherently subject to a number of important risks and uncertainties, including the number of vehicles that our OE customers will actually produce, the timing of that production and the mix of options that our OE customers and consumers may choose. For several years prior to 2008, substantially all of our North American vehicle manufacturing customers had slowed or maintained at relatively flat levels new vehicle production. In 2009, new vehicle production decreased dramatically in many geographic regions as a result of the global economic crisis. During the second half of 2009 and in 2010, new vehicle production stabilized and began to strengthen from these low production levels, though not to the levels seen in recent history. In addition to the risks inherent in the cyclical nature of vehicle production, our customers generally have the right to replace us with another supplier at any time for a variety of reasons and have demanded price decreases over the life of awarded business. Accordingly, we cannot assure you that we will in fact realize any or all of the future sales represented by our awarded business. Any failure to realize these sales could have a material adverse effect on our financial condition, results of operations, and liquidity.

In many cases, we must commit substantial resources in preparation for production under awarded OE business well in advance of the customer's production start date. In certain instances, the terms of our OE customer arrangements permit us to recover these pre-production costs if the customer cancels the business through no fault of our company. Although we have been successful in recovering these costs under appropriate circumstances in the past, we can give no assurance that our results of operations will not be materially impacted in the future if we are unable to recover these types of pre-production costs related to OE cancellation of awarded business.

***Our level of debt makes us more sensitive to the effects of economic downturns; our level of debt and provisions in our debt agreements could limit our ability to react to changes in the economy or our industry.***

Our level of debt makes us more vulnerable to changes in our results of operations because a substantial portion of our cash flow from operations is dedicated to servicing our debt and is not available for other purposes. Our level of debt could have other negative consequences to us, including the following:

limiting our ability to borrow money or sell stock for our working capital, capital expenditures, debt service requirements or other general corporate purposes;

limiting our flexibility in planning for, or reacting to, changes in our operations, our business or the industry in which we compete; and

**Table of Contents**

our leverage may place us at a competitive disadvantage by limiting our ability to invest in the business or in further research and development.

Our ability to make payments on our indebtedness depends on our ability to generate cash in the future. If we do not generate sufficient cash flow to meet our debt service and working capital requirements, we may need to seek additional financing or sell assets. This may make it more difficult for us to obtain financing on terms that are acceptable to us, or at all. Without any such financing, we could be forced to sell assets to make up for any shortfall in our payment obligations under unfavorable circumstances. If necessary, we may not be able to sell assets quickly enough or for sufficient amounts to enable us to meet our obligations.

In addition, our senior credit facility and our other debt agreements contain covenants that limit our flexibility in planning for or reacting to changes in our business and our industry, including limitations on incurring additional indebtedness, making investments, granting liens and merging or consolidating with other companies. Complying with these covenants may impair our ability to finance our future operations or capital needs or to engage in other favorable business activities.

***Our failure to comply with the covenants contained in our senior credit facility or the indentures for our other debt instruments, including as a result of events beyond our control, could result in an event of default, which could materially and adversely affect our operating results and our financial condition.***

Our senior credit facility and receivables securitization program in the U.S. require us to maintain certain financial ratios. Our senior credit facility and our other debt instruments require us to comply with various operational and other covenants. If there were an event of default under any of our debt instruments that was not cured or waived, the holders of the defaulted debt could cause all amounts outstanding with respect to that debt to be due and payable immediately. We cannot assure you that our assets or cash flow would be sufficient to fully repay borrowings under our outstanding debt instruments, either upon maturity or if accelerated, upon an event of default, or that we would be able to refinance or restructure the payments on those debt instruments.

For example, in February 2009, we sought an amendment to our senior credit facility to revise the financial ratios we are required to maintain thereunder. If, in the future, we are required to obtain similar amendments as a result of our inability to meet the required financial ratios, there can be no assurance that those amendments will be available on commercially reasonable terms or at all. If, as or when required, we are unable to repay, refinance or restructure our indebtedness under our senior credit facility, or amend the covenants contained therein, the lenders under our senior credit facility could elect to terminate their commitments thereunder, cease making further loans and institute foreclosure proceedings against our assets. Under such circumstances, we could be forced into bankruptcy or liquidation. In addition, any event of default or declaration of acceleration under one of our debt instruments could also result in an event of default under one or more of our other financing agreements, including our other debt instruments and/or the agreements under which we sell certain of our accounts receivable. This would have a material adverse impact on our liquidity, financial position and results of operations.

***Our working capital requirements may negatively affect our liquidity and capital resources.***

Our working capital requirements can vary significantly, depending in part on the level, variability and timing of our customers' worldwide vehicle production and the payment terms with our customers and suppliers. If our working capital needs exceed our cash flows from operations, we would look to our cash balances and availability for borrowings under our borrowing arrangements to satisfy those needs, as well as potential sources of additional capital, which may not be available on satisfactory terms and in adequate amounts, if at all.

***The hourly workforce in the automotive industry is highly unionized and our business could be adversely affected by labor disruptions.***

A portion of our hourly workforce in North America and the majority of our hourly workforce in Europe is unionized. Although we consider our current relations with our employees to be satisfactory, if major work

**Table of Contents**

disruptions were to occur, our business could be adversely affected by, for instance, a loss of revenues, increased costs or reduced profitability. We have not experienced a material labor disruption in our recent history, but there can be no assurance that we will not experience a material labor disruption at one of our facilities in the future in the course of renegotiation of our labor arrangements or otherwise.

In addition, substantially all of the hourly employees of General Motors, Ford and Chrysler in North America and many of their other suppliers are represented by the United Automobile, Aerospace and Agricultural Implement Workers of America under collective bargaining agreements. Vehicle manufacturers and such suppliers and their employees in other countries are also subject to labor agreements. A work stoppage or strike at one of our production facilities, at those of a customer, or at or impacting a supplier of ours or any of our customers, such as the 2008 strike at American Axle which resulted in 30 GM facilities in North America being idled for several months, could have an adverse impact on us by disrupting demand for our products and/or our ability to manufacture our products.

***In the past, we have experienced significant increases in raw materials pricing; and future changes in the prices of raw materials or utilities could have a material adverse impact on us.***

Significant increases in the cost of certain raw materials used in our products or the cost of utilities required to produce our products, to the extent they are not timely reflected in the price we charge our customers or are otherwise mitigated, could materially and adversely impact our results. For example, from 2004 through 2008, we experienced significant increases in processed metal and steel prices. We addressed these increases by evaluating alternative materials and processes, reviewing material substitution opportunities, increasing component and assembly outsourcing to low cost countries and aggressively negotiating with our customers to allow us to recover these higher costs from them. In addition to these actions, we continue to pursue productivity initiatives and review opportunities to reduce costs through restructuring activities. During periods of economic recovery, the cost of raw materials and utilities generally rise. Accordingly, we cannot assure you that we will not face increased prices in the future or, if we do, whether these actions will be effective in containing margin pressures from any further raw material or utility price increases.

***We may be unable to realize our business strategy of improving operating performance, growing our business and generating savings and improvements.***

We regularly implement strategic and other initiatives designed to improve our operating performance and grow our business. The failure to achieve the goals of these initiatives could have a material adverse effect on our business, particularly since we rely on these initiatives to offset pricing pressures from our suppliers and our customers, as described above, as well as to manage the impacts of production cuts such as the significant production decreases we experienced during 2008 and 2009 in particular as a result of the recent global economic crisis. Furthermore, the terms of our senior credit facility may restrict the types of initiatives we undertake, as these agreements restrict our uses of cash, certain of these agreements require us to maintain financial ratios and otherwise prohibit us from undertaking certain activities. In the past we have been successful in obtaining the consent of our senior lenders where appropriate in connection with our initiatives. We cannot assure you, however, that we will be able to pursue, successfully implement or realize the expected benefits of any initiative or that we will be able to sustain improvements made to date.

In addition, we believe that increasingly stringent environmental standards for emissions have presented and will continue to present an important opportunity for us to grow our emissions control business. We cannot assure you, however, that environmental standards for emissions will continue to become more stringent or that the adoption of any new standards will not be delayed beyond our expectations.

***We may incur material costs related to product warranties, environmental and regulatory matters and other claims, which could have a material adverse impact on our financial condition and results of operations.***

From time to time, we receive product warranty claims from our customers, pursuant to which we may be required to bear costs of repair or replacement of certain of our products. Vehicle manufacturers are increasingly requiring their outside suppliers to guarantee or warrant their products and to be responsible for

## **Table of Contents**

the operation of these component products in new vehicles sold to consumers. Warranty claims may range from individual customer claims to full recalls of all products in the field. We cannot assure you that costs associated with providing product warranties will not be material, or that those costs will not exceed any amounts reserved in our consolidated financial statements. For a description of our accounting policies regarding warranty reserves, see Management's Discussion and Analysis of Financial Condition and Results of Operations Critical Accounting Policies included in Item 7.

We are subject to extensive government regulations worldwide. Foreign, Federal, state and local laws and regulations may change from time to time and our compliance with new or amended laws and regulations in the future may require a material increase in our costs and could adversely affect our results of operations and competitive position. For example, we are subject to a variety of environmental and pollution control laws and regulations in all jurisdictions in which we operate. Soil and groundwater remediation activities are being conducted at certain of our current and former real properties. We record liabilities for these activities when environmental assessments indicate that the remedial efforts are probable and the costs can be reasonably estimated. On this basis, we have established reserves that we believe are adequate for the remediation activities at our current and former real properties for which we could be held responsible. Although we believe our estimates of remediation costs are reasonable and are based on the latest available information, the cleanup costs are estimates and are subject to revision as more information becomes available about the extent of remediation required. In future periods, we could be subject to charges to earnings if we are required to undertake material additional remediation efforts based on the results of our ongoing analyses of the environmental status of our properties, as more information becomes available to us.

We also from time to time are involved in legal proceedings, claims or investigations that are incidental to the conduct of our business. Some of these proceedings allege damages against us relating to environmental liabilities, intellectual property matters, personal injury claims, taxes, employment matters or commercial or contractual disputes. For example, we are subject to a number of lawsuits initiated by a significant number of claimants alleging health problems as a result of exposure to asbestos. Many of these cases involve significant numbers of individual claimants. Many of these cases also involve numerous defendants, with the number of defendants in some cases exceeding 100 defendants from a variety of industries. As major asbestos manufacturers or other companies that used asbestos in their manufacturing processes continue to go out of business, we may experience an increased number of these claims.

We vigorously defend ourselves in connection with all of the matters described above. We cannot, however, assure you that the costs, charges and liabilities associated with these matters will not be material, or that those costs, charges and liabilities will not exceed any amounts reserved for them in our consolidated financial statements. In future periods, we could be subject to cash costs or charges to earnings if any of these matters are resolved unfavorably to us. See Management's Discussion and Analysis of Financial Condition and Results of Operations Environmental and Other Matters included in Item 7.

### ***We may have difficulty competing favorably in the highly competitive automotive parts industry.***

The automotive parts industry is highly competitive. Although the overall number of competitors has decreased due to ongoing industry consolidation, we face significant competition within each of our major product areas, including from new competitors entering the markets which we serve. The principal competitive factors include price, quality, service, product performance, design and engineering capabilities, new product innovation, global presence and timely delivery. As a result, many suppliers have established or are establishing themselves in emerging, low-cost markets to reduce their costs of production and be more conveniently located for customers. Although we are also pursuing a low-cost country production strategy and otherwise continue to seek process improvements to reduce costs, we cannot assure you that we will be able to continue to compete favorably in this competitive market or that increased competition will not have a material adverse effect on our business by reducing our ability to increase or maintain sales or profit margins.

**Table of Contents**

***The decreasing number of automotive parts customers and suppliers could make it more difficult for us to compete favorably.***

Our financial condition and results of operations could be adversely affected because the customer base for automotive parts is decreasing in both the original equipment market and aftermarket. As a result, we are competing for business from fewer customers. Due to the cost focus of these major customers, we have been, and expect to continue to be, requested to reduce prices as part of our initial business quotations and over the life of vehicle platforms we have been awarded. We cannot be certain that we will be able to generate cost savings and operational improvements in the future that are sufficient to offset price reductions requested by existing customers and necessary to win additional business.

Furthermore, the trend toward consolidation and bankruptcies among automotive parts suppliers is resulting in fewer, larger suppliers who benefit from purchasing and distribution economies of scale. If we cannot achieve cost savings and operational improvements sufficient to allow us to compete favorably in the future with these larger companies, our financial condition and results of operations could be adversely affected due to a reduction of, or inability to increase, sales.

***We may not be able to successfully respond to the changing distribution channels for aftermarket products.***

Major automotive aftermarket retailers, such as AutoZone and Advance Auto Parts, are attempting to increase their commercial sales by selling directly to automotive parts installers in addition to individual consumers. These installers have historically purchased from their local warehouse distributors and jobbers, who are our more traditional customers. We cannot assure you that we will be able to maintain or increase aftermarket sales through increasing our sales to retailers. Furthermore, because of the cost focus of major retailers, we have occasionally been requested to offer price concessions to them. Our failure to maintain or increase aftermarket sales, or to offset the impact of any reduced sales or pricing through cost improvements, could have an adverse impact on our business and operating results.

***Longer product lives of automotive parts are adversely affecting aftermarket demand for some of our products.***

The average useful life of automotive parts has steadily increased in recent years due to innovations in products and technologies. The longer product lives allow vehicle owners to replace parts of their vehicles less often. As a result, a portion of sales in the aftermarket has been displaced. This has adversely impacted, and could continue to adversely impact, our aftermarket sales. Also, any additional increases in the average useful lives of automotive parts would further adversely affect the demand for our aftermarket products. Aftermarket sales represented approximately 20 percent and 22 percent of our net sales in the fiscal years ended December 31, 2010 and 2009, respectively.

***Assertions against us or our customers relating to intellectual property rights could materially impact our business.***

We and others in our industry hold a number of patents and other intellectual property rights that are critical to our respective businesses. On occasion, third parties may assert claims against us and our customers and distributors alleging our products or technology infringe upon third-party intellectual property rights. Similarly, we may assert claims against third-parties who are taking actions that we believe are infringing on our intellectual property rights. These claims, regardless of their merit or resolution, are frequently costly to prosecute, defend or settle and divert the efforts and attention of our management and employees. Claims of this sort also could harm our relationships with our customers and might deter future customers from doing business with us. If any such claim were to result in an adverse outcome, we could be required to take actions which may include: cease the manufacture, use or sale of the infringing products; pay substantial damages to third parties, including to customers to compensate them for their discontinued use or replace infringing technology with non-infringing technology; or expend significant resources to

develop or license non-infringing products. Any of the foregoing results could have a material adverse effect on our business, financial condition and results of operations.

**Table of Contents**

***Any acquisitions we make could disrupt our business and seriously harm our financial condition.***

We may, from time to time, consider acquisitions of complementary companies, products or technologies. Acquisitions involve numerous risks, including difficulties in the assimilation of the acquired businesses, the diversion of our management's attention from other business concerns and potential adverse effects on existing business relationships with current customers and suppliers. In addition, any acquisitions could involve the incurrence of substantial additional indebtedness. We cannot assure you that we will be able to successfully integrate any acquisitions that we pursue or that such acquisitions will perform as planned or prove to be beneficial to our operations and cash flow. Any such failure could seriously harm our business, financial condition and results of operations.

***We are subject to risks related to our international operations.***

We have manufacturing and distribution facilities in many regions and countries, including Australia, Asia, North America, Europe, South Africa and South America, and sell our products worldwide. For the fiscal year ended December 31, 2010, approximately 52 percent of our net sales were derived from operations outside North America. International operations are subject to various risks which could have a material adverse effect on those operations or our business as a whole, including:

exposure to local economic conditions;

exposure to local political conditions, including the risk of seizure of assets by a foreign government;

exposure to local social unrest, including any resultant acts of war, terrorism or similar events;

exposure to local public health issues and the resultant impact on economic and political conditions;

currency exchange rate fluctuations;

hyperinflation in certain foreign countries;

controls on the repatriation of cash, including imposition or increase of withholding and other taxes on remittances and other payments by foreign subsidiaries; and

export and import restrictions.

***Exchange rate fluctuations could cause a decline in our financial condition and results of operations.***

As a result of our international operations, we are subject to increased risk because we generate a significant portion of our net sales and incur a significant portion of our expenses in currencies other than the U.S. dollar. For example, where we have a greater portion of costs than revenues generated in a foreign currency, we are subject to risk if the foreign currency in which our costs are paid appreciates against the currency in which we generate revenue because the appreciation effectively increases our cost in that country.

The financial condition and results of operations of some of our operating entities are reported in foreign currencies and then translated into U.S. dollars at the applicable exchange rate for inclusion in our consolidated financial statements. As a result, appreciation of the U.S. dollar against these foreign currencies generally will have a negative impact on our reported revenues and operating profit while depreciation of the U.S. dollar against these foreign currencies will generally have a positive effect on reported revenues and operating profit. For example, our European

operations were positively impacted in 2007 due to the strengthening of the Euro against the U.S. dollar. However, in 2008 through 2010, the dollar strengthened against the Euro which had negative effects on our results of operations. Our South American operations were negatively impacted by the devaluation in 2000 of the Brazilian currency as well as by the devaluation of the Argentine currency in 2002. We do not generally seek to mitigate this translation effect through the use of derivative financial instruments. To the extent we are unable to match revenues received in foreign currencies with costs paid in the same currency, exchange rate fluctuations in that currency could have a material adverse effect on our business.

**Table of Contents**

***Entering new markets poses new competitive threats and commercial risks.***

As we have expanded into markets beyond light vehicles, we expect to diversify our product sales by leveraging technologies being developed for the light vehicle segment. Such diversification requires investments and resources which may not be available as needed. We cannot guarantee that we will be successful in leveraging our capabilities into new markets and thus, in meeting the needs of these new customers and competing favorably in these new markets. Further, a significant portion of our growth potential is dependent on our ability to increase sales to commercial vehicle customers. While we believe that we can achieve our growth targets with the production contracts that have been awarded to us, our future prospects will be negatively affected if those customers underlying these contracts experience reduced demand for their production or financial difficulties.

***Impairment in the carrying value of long-lived assets and goodwill could negatively affect our operating results.***

We have a significant amount of long-lived assets and goodwill on our consolidated balance sheet. Under generally accepted accounting principles, long-lived assets are required to be reviewed for impairment whenever adverse events or changes in circumstances indicate a possible impairment. If business conditions or other factors cause profitability and cash flows to decline, we may be required to record non-cash impairment charges. Goodwill must be evaluated for impairment annually or more frequently if events indicate it is warranted. If the carrying value of our reporting units exceeds their current fair value as determined based on the discounted future cash flows of the related business, the goodwill is considered impaired and is reduced to fair value by a non-cash charge to earnings. Events and conditions that could result in impairment in the value of our long-lived assets and goodwill include changes in the industries in which we operate, particularly the impact of a downturn in the global economy, as well as competition and advances in technology, adverse changes in the regulatory environment, or other factors leading to reduction in expected long-term sales or profitability. For example, during the fiscal year ended December 31, 2008, we were required to record a \$114 million asset impairment charge to write-off the remaining goodwill related to our 1996 acquisition of Clevite Industries.

***The value of our deferred tax assets could become impaired, which could materially and adversely affect our operating results.***

As of December 31, 2010, we had approximately \$67 million in net deferred tax assets. These deferred tax assets include net operating loss carryovers that can be used to offset taxable income in future periods and reduce income taxes payable in those future periods. Each quarter, we determine the probability of the realization of deferred tax assets, using significant judgments and estimates with respect to, among other things, historical operating results, expectations of future earnings and tax planning strategies. For example, we were required to record charges during the fiscal year ended December 31, 2008 for a valuation allowance against our U.S. deferred tax assets. These charges were attributable to the significant decline in production which resulted from the global economic crisis which began in 2008, and the accounting requirement to project that the negative operating environment will continue through the expiration of the net operating loss carry-forward periods. If we determine in the future that there is not sufficient positive evidence to support the valuation of these assets, due to the risk factors described herein or other factors, we may be required to further adjust the valuation allowance to reduce our deferred tax assets. Such a reduction could result in material non-cash expenses in the period in which the valuation allowance is adjusted and could have a material adverse effect on our results of operations.

***Our expected annual effective tax rate could be volatile and materially change as a result of changes in mix of earnings and other factors.***

Our overall effective tax rate is equal to our total tax expense as a percentage of our total profit or loss before tax. However, tax expenses and benefits are determined separately for each tax paying entity or group of entities that is

consolidated for tax purposes in each jurisdiction. Losses in certain jurisdictions may provide no current financial statement tax benefit. As a result, changes in the mix of profits and losses between jurisdictions, among other factors, could have a significant impact on our overall effective tax rate.

**Table of Contents**

**ITEM 1B. UNRESOLVED STAFF COMMENTS.**

None.

**ITEM 2. PROPERTIES.**

We lease our principal executive offices, which are located at 500 North Field Drive, Lake Forest, Illinois, 60045.

Walker's consolidated businesses operate 11 manufacturing facilities in the U.S. and 45 manufacturing facilities outside of the U.S. Walker consolidated businesses also operate five engineering and technical facilities worldwide and share two other such facilities with Monroe. Twenty-seven of these manufacturing plants are JIT facilities. In addition, three joint ventures in which we hold a noncontrolling interest operate a total of three manufacturing facilities outside the U.S., all of which are JIT facilities.

Monroe's consolidated businesses operate seven manufacturing facilities in the U.S. and 23 manufacturing facilities outside the U.S. Monroe's consolidated businesses also operate seven engineering and technical facilities worldwide and share two other such facilities with Walker. Three of these manufacturing plants are JIT facilities.

The above-described manufacturing locations outside of the U.S. are located in Argentina, Austria, Australia, Belgium, Brazil, Canada, China, the Czech Republic, Denmark, France, Germany, India, Italy, Korea, Mexico, New Zealand, Poland, Portugal, Russia, Spain, South Africa, Sweden, Thailand, and the United Kingdom. We also have sales offices located in Japan, Singapore and Taiwan.

We own 52 of the properties described above and lease 60. We hold 16 of the above-described international manufacturing facilities through seven joint ventures in which we own a controlling interest. In addition, three joint ventures in which we hold a noncontrolling interest operate a total of three manufacturing facilities outside the U.S. We also have distribution facilities at our manufacturing sites and at a few offsite locations, substantially all of which we lease.

We believe that substantially all of our plants and equipment are, in general, well maintained and in good operating condition. They are considered adequate for present needs and, as supplemented by planned construction, are expected to remain adequate for the near future.

We also believe that we have generally satisfactory title to the properties owned and used in our respective businesses.

**ITEM 3. LEGAL PROCEEDINGS.**

We are subject to a variety of environmental and pollution control laws and regulations in all jurisdictions in which we operate. We expense or capitalize, as appropriate, expenditures for ongoing compliance with environmental regulations that relate to current operations. We expense costs related to an existing condition caused by past operations that do not contribute to current or future revenue generation. We record liabilities when environmental assessments indicate that required remedial efforts are probable and the costs can be reasonably estimated. Estimates of the liability are based upon currently available facts, existing technology, and presently enacted laws and regulations taking into consideration the likely effects of inflation and other societal and economic factors. We consider all available evidence including prior experience in remediation of contaminated sites, other companies cleanup experiences and data released by the United States Environmental Protection Agency or other organizations. These estimated liabilities are subject to revision in future periods based on actual costs or new information. Where future cash flows are fixed or reliably determinable, we have discounted the liabilities, as discussed in Footnote 12

Commitments and Contingency Litigation, of our notes to consolidated financial statements. All other environmental liabilities are recorded at their undiscounted amounts. We evaluate recoveries separately from the liability and, when they are assured, recoveries are recorded and reported separately from the associated liability in our consolidated financial statements.

## **Table of Contents**

As of December 31, 2010, we have the obligation to remediate or contribute towards the remediation of certain sites, including two existing Superfund sites. At December 31, 2010, our aggregated estimated share of environmental remediation costs for all these sites on a discounted basis was approximately \$16 million, of which \$5 million is recorded in other current liabilities and \$11 million is recorded in deferred credits and other liabilities in our consolidated balance sheet. For those locations in which the liability was discounted, the weighted average discount rate used was 3.2 percent. The undiscounted value of the estimated remediation costs was \$21 million. Our expected payments of environmental remediation costs are estimated to be approximately \$5 million in 2011, \$1 million in each year beginning 2012 through 2015 and \$12 million thereafter. Based on information known to us, we have established reserves that we believe are adequate for these costs. Although we believe these estimates of remediation costs are reasonable and are based on the latest available information, the costs are estimates and are subject to revision as more information becomes available about the extent of remediation required. At some sites, we expect that other parties will contribute towards the remediation costs. In addition, certain environmental statutes provide that our liability could be joint and several, meaning that we could be required to pay in excess of our share of remediation costs. Our understanding of the financial strength of other potentially responsible parties at these sites has been considered, where appropriate, in our determination of our estimated liability.

The \$16 million noted above includes \$5 million of estimated environmental remediation costs that resulted from the bankruptcy of Mark IV Industries in 2009. Prior to our 1996 acquisition of The Pullman Company, Pullman had sold certain assets to Mark IV. As partial consideration for the purchase of these assets, Mark IV agreed to assume Pullman's and its subsidiaries' historical obligations to contribute to the environmental remediation of certain sites. In April 2009, Mark IV filed a petition for insolvency under Chapter 11 of the United States Bankruptcy Code and notified Pullman that it no longer intends to continue to contribute toward the remediation of those sites. We are continuing to conduct a thorough analysis and review of our remediation obligations and it is possible that our estimate may change as additional information becomes available to us.

We do not believe that any potential costs associated with our current status as a potentially responsible party in the Superfund sites, or as a liable party at the other locations referenced herein, will be material to our consolidated results of operations, financial position or cash flows.

We also from time to time are involved in legal proceedings, claims or investigations that are incidental to the conduct of our business. Some of these proceedings allege damages against us relating to environmental liabilities (including toxic tort, property damage and remediation), intellectual property matters (including patent, trademark and copyright infringement, and licensing disputes), personal injury claims (including injuries due to product failure, design or warning issues, and other product liability related matters), taxes, employment matters, and commercial or contractual disputes, sometimes related to acquisitions or divestitures. For example, one of our Argentine subsidiaries is currently defending against a criminal complaint alleging the failure to comply with laws requiring the proceeds of export transactions to be collected, reported and/or converted to local currency within specified time periods. As another example, we are subject to an audit in 11 states of our practices with respect to the payment of unclaimed property to those states. We are in the early stages of this audit, which could cover over 30 years. We now have practices in place which we believe ensure that we pay unclaimed property as required. We vigorously defend ourselves against all of these claims. In future periods, we could be subject to cash costs or charges to earnings if any of these matters are resolved on unfavorable terms. However, although the ultimate outcome of any legal matter cannot be predicted with certainty, based on current information, including our assessment of the merits of the particular claim, we do not expect that these legal proceedings or claims will have any material adverse impact on our future consolidated financial position, results of operations or cash flows.

In addition, we are subject to a number of lawsuits initiated by a significant number of claimants alleging health problems as a result of exposure to asbestos. In the early 2000's we were named in nearly 20,000 complaints, most of which were filed in Mississippi state court and the vast majority of which made no allegations of exposure to asbestos

from our product categories. Most of these claims have been dismissed and our current docket of active and inactive cases is less than 500 cases nationwide. A small number of claims have been asserted by railroad workers alleging exposure to asbestos products in railroad cars manufactured by

**Table of Contents**

The Pullman Company, one of our subsidiaries. The balance of the claims is related to alleged exposure to asbestos in our automotive emission control products. Only a small percentage of the claimants allege that they were automobile mechanics and a significant number appear to involve workers in other industries or otherwise do not include sufficient information to determine whether there is any basis for a claim against us. We believe, based on scientific and other evidence, it is unlikely that mechanics were exposed to asbestos by our former muffler products and that, in any event, they would not be at increased risk of asbestos-related disease based on their work with these products. Further, many of these cases involve numerous defendants, with the number of each in some cases exceeding 100 defendants from a variety of industries. Additionally, the plaintiffs either do not specify any, or specify the jurisdictional minimum, dollar amount for damages. As major asbestos manufacturers continue to go out of business or file for bankruptcy, we may experience an increased number of these claims. We vigorously defend ourselves against these claims as part of our ordinary course of business. In future periods, we could be subject to charges to earnings if any of these matters are resolved unfavorably to us. To date, with respect to claims that have proceeded sufficiently through the judicial process, we have regularly achieved favorable resolutions. Accordingly, we presently believe that these asbestos-related claims will not have a material adverse impact on our future consolidated financial condition, results of operations or cash flows.

**ITEM 4. (REMOVED AND RESERVED)****ITEM 4.1. EXECUTIVE OFFICERS OF THE REGISTRANT.**

The following provides information concerning the persons who serve as our executive officers as of February 25, 2011.

<b>Name and Age</b>	<b>Offices Held</b>
Gregg M. Sherrill (58)	Chairman and Chief Executive Officer
Hari N. Nair (51)	Chief Operating Officer
Kenneth R. Trammell (50)	Executive Vice President and Chief Financial Officer
Neal A. Yanos (49)	Executive Vice President, North America
Josep Fornos (58)	Senior Vice President, Europe, South America and India
Brent J. Bauer (55)	Senior Vice President and General Manager North American Original Equipment Emission Control
Michael J. Charlton (52)	Senior Vice President, Global Supply Chain Management and Manufacturing
James D. Harrington (50)	Senior Vice President, General Counsel and Corporate Secretary
Timothy E. Jackson (54)	Senior Vice President and Chief Technology Officer
Barbara A. Kluth (54)	Vice President Global Human Resources
Paul D. Novas (52)	Vice President and Controller

**Gregg M. Sherrill** Mr. Sherrill was named the Chairman and Chief Executive Officer of Tenneco in January 2007. Mr. Sherrill joined us from Johnson Controls Inc., where he served since 1998, most recently as President, Power Solutions. From 2002 to 2003, Mr. Sherrill served as the Vice President and Managing Director of Europe, South Africa and South America for Johnson Controls Automotive Systems Group. Prior to joining Johnson Controls, Mr. Sherrill held various engineering and manufacturing assignments over a 22-year span at Ford Motor Company, including Plant Manager of Ford's Dearborn, Michigan engine plant, Chief Engineer, Steering Systems and Director of Supplier Technical Assistance. Mr. Sherrill became a director of our company in January 2007.

**Hari N. Nair** Mr. Nair was named Chief Operating Officer in July 2010. Prior to that, he served as our Executive Vice President and President International since March 2007. Previously, Mr. Nair served as Executive Vice President and Managing Director of our business in Europe, South America and India. Before that, he was Senior Vice President and Managing Director International. Prior to December 2000, Mr. Nair was the Vice President and Managing Director Emerging Markets. Previously, Mr. Nair was the Managing Director for Tenneco Automotive Asia, based in Singapore and responsible for all operations and development

**Table of Contents**

projects in Asia. He began his career with the former Tenneco Inc. in 1987, holding various positions in strategic planning, marketing, business development, quality systems and finance. Prior to joining Tenneco, Mr. Nair was a senior financial analyst at General Motors Corporation focusing on European operations. Mr. Nair became a director of our company in March 2009.

**Kenneth R. Trammell** Mr. Trammell has served as our Executive Vice President and Chief Financial Officer since January 2006. Mr. Trammell was named our Senior Vice President and Chief Financial Officer in September 2003, having served as our Vice President and Controller since September 1999. From April 1997 to November 1999, he served as Corporate Controller of Tenneco Inc. He joined Tenneco Inc. in May 1996 as Assistant Controller. Before joining Tenneco Inc., Mr. Trammell spent 12 years with the international public accounting firm of Arthur Andersen LLP, last serving as a senior manager.

**Neal A. Yanos** Mr. Yanos was named Executive Vice President, North America in July 2008. Prior to that, he served as our Senior Vice President and General Manager North American Original Equipment Ride Control and North American Aftermarket since May 2003. He joined our Monroe ride control division as a process engineer in 1988 and since that time has served in a broad range of assignments including product engineering, strategic planning, business development, finance, program management and marketing, including Director of our North American Original Equipment GM/VW business unit and most recently as our Vice President and General Manager North American Original Equipment Ride Control from December 2000. Before joining our company, Mr. Yanos was employed in various engineering positions by Sheller Globe Inc. from 1985 to 1988.

**Josep Fornos** Josep Fornos was named Senior Vice President, Europe, South America and India in July 2010. Prior to this appointment, he had served as Vice President and General Manager, Europe Original Equipment Emission Control since March 2007. Mr. Fornos joined Tenneco in July 2000 as Vice President and General Manager, Europe Original Equipment Ride Control. Prior to joining Tenneco, Fornos spent a year at Lear Corporation as General Manager of the company's seating and wire and harness business in France, following Lear's acquisition of United Technologies Automotive. Mr. Fornos spent 16 years with United Technologies Automotive, holding several management positions in production, engineering and quality control in Spain and later having Europe-wide responsibility for engineering and quality control.

**Brent J. Bauer** Mr. Bauer has served as the Senior Vice President and General Manager North American Original Equipment Emission Control since May 2002. Prior to this appointment, Mr. Bauer was named Vice President and General Manager European and North American Original Equipment Emission Control in July 2001. Mr. Bauer joined Tenneco Automotive in August 1996 as a Plant Manager and was named Vice President and General Manager European Original Equipment Emission Control in September 1999. Prior to joining Tenneco, he was employed at AeroquipVickers Corporation for 20 years in positions of increasing responsibility serving most recently as Director of Operations.

**Michael J. Charlton** Mr. Charlton has served as our Senior Vice President, Global Supply Chain Management and Manufacturing since January 2010. Mr. Charlton served as our Vice President, Global Supply Chain Management and Manufacturing from November 2008 through December 2009. Mr. Charlton served as Tenneco's Managing Director for India from January 2008 until November 2008. Prior to that, he served as the operations director for the Company's emission control business in Europe since 2005. Prior to joining Tenneco in 2005, Mr. Charlton held a variety of positions of increasing responsibility at TRW Automotive, the most recent being Lead Director, European Purchasing and Operations for the United Kingdom.

**James D. Harrington** Mr. Harrington has served as our Senior Vice President, General Counsel and Corporate Secretary since June 2009 and is responsible for managing our worldwide legal affairs including corporate governance and compliance. Mr. Harrington joined us in January 2005 as Corporate Counsel and was named Vice President Law

in July 2007. Prior to joining Tenneco, he worked at Mayer Brown LLP in the firm's corporate and securities practice.

**Timothy E. Jackson** In March 2007, Mr. Jackson was named our Chief Technology Officer. Prior to this role, Mr. Jackson served as our Senior Vice President - Global Technology and General Manager, Asia Pacific since July 2005. From 2002 to 2005, Mr. Jackson served as Senior Vice President - Manufacturing,

**Table of Contents**

Engineering, and Global Technology. In August 2000, he was named Senior Vice President Global Technology, a role he served in after joining us as Senior Vice President and General Manager North American Original Equipment and Worldwide Program Management in June 1999. Mr. Jackson came to Tenneco from ITT Industries where he was President of that company's Fluid Handling Systems Division. With over 30 years of management experience, 14 within the automotive industry, he had also served as Chief Executive Officer for HiSAN, a joint venture between ITT Industries and Sanoh Industrial Company. Mr. Jackson has also held senior management positions at BF Goodrich Aerospace and General Motors Corporation.

**Barbara A. Kluth** Ms. Kluth currently serves as Vice President, Global Human Resources, a position she has held since April 2010. In December 2001, she was named Executive Director, HR, North America after beginning her career in human resources in 1988 as HR manager for our Marshall, Michigan facility. She joined Tenneco in 1985 as an internal auditor.

**Paul D. Novas** Mr. Novas was named our Vice President and Controller in July 2006. Mr. Novas served as Vice President, Finance and Administration for Tenneco Europe from January 2004 until July 2006 and as Vice President and Treasurer of Tenneco from November 1999 until January 2004. Mr. Novas joined Tenneco in 1996 as assistant treasurer responsible for corporate finance and North American treasury operations. Prior to joining Tenneco, Mr. Novas worked in the treasurer's office of General Motors Corporation for ten years.

**PART II****ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS, AND ISSUER PURCHASES OF EQUITY SECURITIES.**

Our outstanding shares of common stock, par value \$.01 per share, are listed on the New York and Chicago Stock Exchanges. The following table sets forth, for the periods indicated, the high and low sales prices of our common stock on the New York Stock Exchange Composite Transactions Tape.

Quarter	Sales Prices	
	High	Low
2010		
1st	\$ 25.00	\$ 17.17
2nd	27.50	19.06
3rd	31.46	19.29
4th	43.71	28.47
2009		
1st	\$ 4.14	\$ 0.67
2nd	11.19	1.56
3rd	18.11	8.14
4th	19.78	11.35

As of February 21, 2011, there were approximately 19,691 holders of record of our common stock, including brokers and other nominees.

The declaration of dividends on our common stock is at the discretion of our Board of Directors. The Board has not adopted a dividend policy as such; subject to legal and contractual restrictions, its decisions regarding dividends are based on all considerations that in its business judgment are relevant at the time. These considerations may include

past and projected earnings, cash flows, economic, business and securities market conditions and anticipated developments concerning our business and operations.

We are highly leveraged and restricted with respect to the payment of dividends under the terms of our financing arrangements. On January 10, 2001, we announced that our Board of Directors eliminated the regular quarterly dividend on the Company's common stock. The Board took this action in response to then-

**Table of Contents**

current industry conditions, primarily greater than anticipated production volume reductions by OEMs in North America and continued softness in the global aftermarket. We have not paid dividends on our common stock since the fourth quarter of 2000. There are no current plans to reinstate a dividend on our common stock, as the Board of Directors intends to retain any earnings for use in our business for the foreseeable future. For additional information concerning our payment of dividends, see Management's Discussion and Analysis of Financial Condition and Results of Operations included in Item 7.

See Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters included in Item 12 for information regarding securities authorized for issuance under our equity compensation plans.

***Purchase of equity securities by the issuer and affiliated purchasers***

The following table provides information relating to our purchase of shares of our common stock in fourth quarter of 2010. All these purchases reflect shares withheld upon vesting of restricted stock for minimum tax withholding obligations.

<b>Period</b>	<b>Total Number of Shares Purchased</b>	<b>Average Price Paid</b>
October 2010		\$
November 2010	8,067	36.34
December 2010	3,279	21.68
Total	11,346	\$ 32.10

We presently have no publicly announced repurchase plan or program, but intend to continue to allow participants to satisfy statutory minimum tax withholding obligations in connection with the vesting of outstanding restricted stock through the withholding of shares.

***Recent Sales of Unregistered Securities***

None.

**Table of Contents*****Share Performance***

The following graph shows a five year comparison of the cumulative total stockholder return on Tenneco's common stock as compared to the cumulative total return of two other indexes: a custom composite index ( Peer Group ) and the Standard & Poor's 500 Composite Stock Price Index. The companies included in the Peer Group are: ArvinMeritor Inc., American Axle & Manufacturing Co., Borg Warner Inc., Cummins Inc., Johnson Controls Inc., Lear Corp., Magna International Inc. and TRW Automotive Holdings Corp. These comparisons assume an initial investment of \$100 and the reinvestment of dividends.

NOTE: Our consolidated financial statements for the three years ended December 31, 2010, which are discussed in the following notes, are included in this Form 10-K under Item 8.

- (a) We incurred no direct economic loss from the bankruptcy filing of Chrysler and General Motors plants in North America during the second and third quarters of 2009. In this regard, we collected substantially all of our pre-petition receivables from Chrysler Group LLC and Chrysler Group LLC has assumed substantially all of the contracts which we had with Chrysler LLC. We collected substantially all of our pre-petition receivables from General Motors Company and General Motors Company has assumed substantially all of the contracts which we had with General Motors Corporation. However, the vehicle production shutdowns at Chrysler and significant reductions in vehicle production volumes at General Motors plants in North America during the second quarter of 2009 that coincided with their bankruptcies did cause Tenneco's revenue from those two customers in North America to decline to \$123 million in the second quarter of 2009, down from \$242 million in the second quarter of 2008. We believe that General Motors and Chrysler were able to meet any unmet demand for their vehicles resulting from their production volume reductions in the second quarter of 2009 during the second half of 2009 after they exited their respective bankruptcy proceedings. Accordingly, for the entire 2009 calendar year, we consider the vehicle production volume reductions at Chrysler and General Motors to have been primarily driven by the same severe deterioration in overall economic conditions that caused substantially all of our original equipment customers in North America to significantly reduce production volumes in response to lower purchases of new vehicles.

- (b) During the fourth quarter of 2008, we recorded a goodwill impairment charge of \$114 million related to our North American Original Equipment Ride Control reporting unit whose carrying value exceeded the estimated fair value. In addition, during the second half of 2008, we recorded tax expense of \$190 million related to establishing a valuation allowance against our net deferred tax assets in the U.S.
- (c) EBITDA including noncontrolling interests is a non-GAAP measure defined as net income before extraordinary items, cumulative effect of changes in accounting principle, interest expense, income taxes, depreciation and amortization and noncontrolling interests. We use EBITDA including noncontrolling interests, together with GAAP measures, to evaluate and compare our operating performance on a consistent basis between time periods and with other companies that compete in our markets but which may have different capital structures and tax positions, which can have an impact on the comparability of interest expense, noncontrolling interests and tax expense. We also believe that using this measure allows us to understand and compare operating performance both with and without depreciation expense, which can vary based on several factors. We believe EBITDA including noncontrolling interests is useful to our investors and other parties for these same reasons.

**Table of Contents**

EBITDA including noncontrolling interests should not be used as a substitute for net income or for net cash provided by operating activities prepared in accordance with GAAP. It should also be noted that EBITDA including noncontrolling interests may not be comparable to similarly titled measures used by other companies and, furthermore, that it excludes expenditures for debt financing, taxes and future capital requirements that are essential to our ongoing business operations. For these reasons, EBITDA including noncontrolling interests is of value to management and investors only as a supplement to, and not in lieu of, GAAP results. EBITDA including noncontrolling interests are derived from the statements of income (loss) as follows:

	2010	Year Ended December 31,			2006
		2009	2008	2007	
			(Millions)		
Net income (loss)	\$ 39	\$ (73)	\$ (415)	\$ (5)	\$ 49
Noncontrolling interests	24	19	10	10	6
Income tax expense	69	13	289	83	5
Interest expense, net of interest capitalized	149	133	113	164	136
Depreciation and amortization of other intangibles	216	221	222	205	184
Total EBITDA including noncontrolling interests	\$ 497	\$ 313	\$ 219	\$ 457	\$ 380

- (d) We present the ratio of net debt (total debt less cash and cash equivalents) to EBITDA including noncontrolling interests because management believes it is a useful measure of Tenneco's credit position and progress toward reducing leverage. The calculation is limited in that we may not always be able to use cash to repay debt on a dollar-for-dollar basis.
- (e) For purposes of computing this ratio, earnings generally consist of income before income taxes and fixed charges excluding capitalized interest. Fixed charges consist of interest expense, the portion of rental expense considered representative of the interest factor and capitalized interest. Earnings were insufficient to cover fixed charges by \$39 million and \$121 million for the years ended December 31, 2009 and 2008, respectively. See Exhibit 12 to this Form 10-K for the calculation of this ratio.

**Table of Contents**

**ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.**

As you read the following review of our financial condition and results of operations, you should also read our consolidated financial statements and related notes beginning on page 74.

**Executive Summary**

We are one of the world's leading manufacturers of automotive emission control and ride control products and systems for light, commercial and specialty vehicle applications. We serve both original equipment (OE) vehicle designers and manufacturers and the repair and replacement markets, or aftermarket, globally through leading brands, including Monroe®, Rancho®, Clevite® Elastomers, Marzocchi® and Fric Rot™ ride control products and Walker®, Fonos™, and Gillet™ emission control products. We serve more than 64 different original equipment manufacturers, and our products or systems are included on nine of the top 10 passenger models produced in Europe and nine of the top 10 light truck models produced in North America for 2010. Our aftermarket customers are comprised of full-line and specialty warehouse distributors, retailers, jobbers, installer chains and car dealers. As of December 31, 2010, we operated 88 manufacturing facilities worldwide and employed approximately 22,000 people to service our customers demands.

Factors that continue to be critical to our success include winning new business awards, managing our overall global manufacturing footprint to ensure proper placement and workforce levels in line with business needs, maintaining competitive wages and benefits, maximizing efficiencies in manufacturing processes and reducing overall costs. In addition, our ability to adapt to key industry trends, such as a shift in consumer preferences to other vehicles in response to higher fuel costs and other economic and social factors, increasing technologically sophisticated content, changing aftermarket distribution channels, increasing environmental standards and extended product life of automotive parts, also play a critical role in our success. Other factors that are critical to our success include adjusting to economic challenges such as increases in the cost of raw materials and our ability to successfully reduce the impact of any such cost increases through material substitutions, cost reduction initiatives and other methods.

The deterioration in the global economy and credit markets which began in 2008 negatively impacted business activity in general, and specifically the automotive industry in which we operate. The market turmoil and tightening of credit led to a steep drop in consumer confidence and consequently, a rapid decline in light vehicle purchases in 2008 and the first half of 2009. The industry began to recover during the second half of 2009 when OE production started to stabilize and strengthen, tracking more closely to vehicle sales, and inventory levels began to be replenished. Light vehicle production in 2010 continued to strengthen in all regions in which we operate. North American light vehicle production was up 39 percent year-over-year, while in Europe, light vehicle production in 2010 was up 15 percent year-over-year.

We have a substantial amount of indebtedness. As such, our ability to generate cash both to fund operations and service our debt is also a significant area of focus for our company. See "Liquidity and Capital Resources" below for further discussion of cash flows and Item 1A, "Risk Factors" included in this Annual Report on Form 10-K.

Total revenues for 2010 were \$5.9 billion, a 28 percent increase from \$4.6 billion in 2009. Excluding the impact of currency and substrate sales, revenue was up \$955 million, or 26 percent, driven primarily by higher OE production in all geographic regions, stronger aftermarket sales, particularly in North and South America, and new launches of light and commercial vehicle programs.

**Table of Contents**

Cost of sales: Cost of sales for 2010 was \$4,900 million, or 82.5 percent of sales, compared to \$3,875 million, or 83.4 percent of sales in 2009. The following table lists the primary drivers behind the change in cost of sales (\$ millions).

Year ended December 31, 2009	\$ 3,875
Volume and mix	976
Material	23
Currency	8
Restructuring	(6)
Other Costs	24
 Year ended December 31, 2010	 \$ 4,900

The increase in cost of sales was due primarily to the year-over-year increase in production volumes, higher material and other costs, mainly manufacturing.

Gross margin: Gross margin for 2010 was 17.5 percent, up 0.9 percentage points from 16.6 percent in 2009. The gross margin improvement was driven by manufacturing efficiencies due to higher year-over-year OE production volumes, lower restructuring and related expenses, material cost management and higher aftermarket revenues. A higher mix of OE revenues which included a higher mix of substrate sales, pricing, primarily related to contractual price reductions, and unfavorable currency partially offset these improvements.

Engineering, research and development: Engineering, research and development expense was \$117 million and \$97 million in 2010 and 2009, respectively. Increased spending related to diesel aftertreatment technology development, higher performance-based compensation costs and the elimination of temporary cost reduction efforts which were in effect during 2009, including employee furloughs and salary and benefit cuts, drove the increase in expense year-over-year.

Selling, general and administrative: Selling, general and administrative expense was up \$73 million in 2010, at \$417 million, compared to \$344 million in 2009. Higher performance-based and stock indexed compensation costs, the temporary cost reduction efforts of 2009, which included employee furloughs and salary and benefit cuts that were subsequently restored by the beginning of 2010, charges related to an actuarial loss for lump-sum pension payments and increased changeover costs due to new aftermarket business in North America, drove the increase in expenses year-over-year. These pension charges relate to a non-qualified pension plan in which one current and three former employees were participants. Lump-sum pension payments are required when participants retire or when they turn 55. Two former employees turned 55 in 2010. Included in 2009 was \$1 million of restructuring and related expenses.

Depreciation and amortization: Depreciation and amortization expense in 2010 was \$216 million, compared to \$221 million in 2009.

Goodwill impairment: There were no goodwill impairment charges in either 2010 or 2009.

Earnings before interest expense, taxes and noncontrolling interests ( EBIT ) was \$281 million for 2010, an improvement of \$189 million, when compared to \$92 million in 2009. Higher OE production volumes globally and the related manufacturing efficiencies, materials cost management, higher aftermarket sales, decreased restructuring and related costs and \$1 million of positive currency drove the year-over-year increase. Partially offsetting the

increase was higher selling, general, administrative and engineering spending, which included higher performance-based and stock indexed compensation costs and the pension charges related to an actuarial loss for lump-sum pension payments, increased changeover costs and unfavorable pricing, primarily related to contractual price reductions. Included in 2009 EBIT was a \$5 million charge related to an environmental reserve.

## **Results from Operations**

### *Net Sales and Operating Revenues for Years 2010 and 2009*

The following tables reflect our revenues for 2010 and 2009. We present these reconciliations of revenues in order to reflect the trend in our sales in various product lines and geographic regions separately from the

**Table of Contents**

effects of doing business in currencies other than the U.S. dollar. We have not reflected any currency impact in the 2009 table since this is the base period for measuring the effects of currency during 2010 on our operations. We believe investors find this information useful in understanding period-to-period comparisons in our revenues.

Additionally, we show the component of our revenue represented by substrate sales in the following tables. While we generally have primary design, engineering and manufacturing responsibility for OE emission control systems, we do not manufacture substrates. Substrates are porous ceramic filters coated with a catalyst of precious metals such as platinum, palladium and rhodium. These are supplied to us by Tier 2 suppliers as directed by our OE customers. We generally earn a small margin on these components of the system. As the need for more sophisticated emission control solutions increases to meet more stringent environmental regulations, and as we capture more diesel aftertreatment business, these substrate components have been increasing as a percentage of our revenue. Changes in commodity prices as well as changes in the mix of vehicles produced by our customers as a result of the economic crisis have recently reduced the percentage of our revenue related to substrates. While these substrates dilute our gross margin percentage, they are a necessary component of an emission control system. We view the growth of substrates as a key indicator that our value-add content in an emission control system is moving toward the higher technology hot-end gas and diesel business.

Our value-add content in an emission control system includes designing the system to meet environmental regulations through integration of the substrates into the system, maximizing use of thermal energy to heat up the catalyst quickly, efficiently managing airflow to reduce back pressure as the exhaust stream moves past the catalyst, managing the expansion and contraction of the emission control system components due to temperature extremes experienced by an emission control system, using advanced acoustic engineering tools to design the desired exhaust sound, minimizing the opportunity for the fragile components of the substrate to be damaged when we integrate it into the emission control system and reducing unwanted noise, vibration and harshness transmitted through the emission control system.

We present these substrate sales separately in the following table because we believe investors utilize this information to understand the impact of this portion of our revenues on our overall business and because it removes the impact of potentially volatile precious metals pricing from our revenues. While our original

**Table of Contents**

equipment customers generally assume the risk of precious metals pricing volatility, it impacts our reported revenues. Excluding substrate catalytic converter and diesel particulate filter sales removes this impact.

**Table of Contents**

North American light vehicle production increased 39 percent, while industry Class 8 commercial vehicle production was up 25 percent and industry Class 4-7 commercial vehicle production was flat in 2010 when compared to 2009. Revenues from our North American operations increased in 2010 compared to last year due to higher OE and aftermarket sales of both product lines. The increase in North American OE revenues was primarily driven by improved production volumes of Tenneco-supplied vehicles such as the Ford F-150 and Super-Duty pick-ups, GM's crossover models and the GMT900 platform which accounted for \$655 million in revenues. Partially offsetting the increase was unfavorable platform mix which impacted revenue by \$31 million year-over-year. The increase in aftermarket revenues for North America was primarily due to higher customer demand for both product lines which resulted in a combined increase in revenue of \$101 million.

Our European, South American and Indian segment's revenues increased in 2010 compared to last year, due to increased sales in both Europe OE business units as well as in South America and India. The full year total European light vehicle industry production was up 15 percent, while industry Class 8 commercial vehicle production was up 55 percent and industry Class 4-7 commercial vehicle production was up 38 percent in 2010 when compared to 2009. Improved volumes due to our content on better-selling vehicles such as the Ford Focus, VW Polo, Opel Astra, Ford Mondeo and the Daimler Sprinter was the primary driver of our increased Europe OE revenues and resulted in an increase in revenue of \$292 million, partially offset by a decrease of \$66 million due to foreign currency. Excluding currency, European aftermarket revenues improved on higher ride control sales volumes of \$16 million, tied in part to heavy duty sales, partially offset by lower emission control sales volumes of \$6 million. Light vehicle production increased nine percent in South America and 35 percent in India for 2010 when compared to 2009. South American and Indian revenues were higher in 2010 when compared to the prior year primarily due to higher aftermarket sales in South America and stronger OE production volumes in both regions, which increased revenue by \$112 million. Currency also added \$33 million to South American and Indian revenue.

Industry light vehicle production increased 30 percent and 8 percent year-over-year in China and Australia, respectively. Revenues from our Asia Pacific segment, which includes Australia and Asia, increased due to higher sales in both regions. Asian revenues for 2010 improved from last year, primarily due to \$133 million from stronger production volumes, particularly in China on key Tenneco-supplied GM, VW and Audi platforms. A \$9 million impact on revenue due to stronger OE production volumes drove the 2010 revenue increase for Australia over 2009. Currency added \$8 million to Asia revenue and \$18 million to Australia revenue.

**Table of Contents****Net Sales and Operating Revenues for Years 2009 and 2008**

The following tables reflect our revenues for the years of 2009 and 2008. See Net Sales and Operating Revenues for Years 2010 and 2009 for a description of why we present these reconciliations of revenue.

---

**Table of Contents**

North American light vehicle production decreased 32 percent in 2009 as compared to 2008. Industry Class 8 commercial vehicle production was down 38 percent and industry Class 4-7 commercial vehicle production was down 39 percent in 2009 compared to 2008. Revenues from our North American operations decreased for 2009 compared to 2008; lower sales from both North American OE business units were partially offset by higher aftermarket revenues. North American OE revenues were down mainly due to lower OE production volumes year-over-year and lower pricing, mainly a decrease in steel recovery due to lower steel costs, which had a combined impact on OE revenues of \$552 million. Excluding unfavorable currency, aftermarket revenues were up driven by stronger ride control volumes and favorable pricing in both product lines, which impacted revenue in total by \$32 million partially offset by lower emission control volumes of \$15 million.

Our European, South American and Indian segment's revenues decreased in 2009 compared to 2008 due to lower sales in all European business units and South America. The 2009 total European light vehicle industry production was down 21 percent when compared to 2008. Europe OE emission control revenues for 2009 were down compared to 2008 due to unfavorable currency of \$178 million and lower OE production volumes and unfavorable pricing, primarily decreased year-over-year alloy surcharge recovery due to lower alloy surcharge costs, which had a combined impact on revenue of \$392 million. Europe OE ride control revenues in 2009 were down from 2008, due to unfavorable currency of \$25 million and lower production volumes, partially offset by new ride control launches including new CES business, and a favorable vehicle mix weighted toward the A/B segment vehicles, which were better sellers under the 2009 government incentive programs, which combined, impacted revenues by \$41 million. European aftermarket revenues decreased for 2009 compared to 2008 due to unfavorable currency of \$30 million. The overall market declined but particularly heavy duty ride control products and the ride control market in Eastern Europe where economies were more severely impacted by the economic crisis. Light vehicle production decreased 2 percent in South America and increased 17 percent in India for 2009 when compared to 2008. South American and Indian revenues were down during 2009 compared to 2008 due mainly to unfavorable currency of \$40 million. When unfavorable currency and substrates were excluded, revenue was up compared to 2008. Our South American and Indian operations benefited from improved OE production volumes in India and favorable pricing in both regions.

Industry light vehicle production increased 52 percent in China and decreased 31 percent in Australia in 2009 compared to 2008. Revenues from our Asia Pacific segment, which includes Australia and Asia, decreased in 2009 compared to 2008 due to lower sales in Australia partially offset by higher sales in Asia. Asian revenues were up from 2008 primarily due to higher OE production volumes, mainly due to China, which impacted revenue by \$34 million. Full year 2009 revenues for Australia decreased due to \$20 million of unfavorable currency and industry light vehicle production declines.

***Earnings before Interest Expense, Income Taxes and Noncontrolling Interests ( EBIT ) for Years 2010 and 2009***

	<b>Year Ended</b>		
	<b>December 31,</b>		
	<b>2010</b>	<b>2009</b>	<b>Change</b>
	<b>(Millions)</b>		
North America	\$ 155	\$ 42	\$ 113
Europe, South America and India	76	20	56
Asia Pacific	50	30	20
	\$ 281	\$ 92	\$ 189

**Table of Contents**

The EBIT results shown in the preceding table include the following items, discussed below under **Restructuring and Other Charges** and **Liquidity and Capital Resources - Capitalization**, which have an effect on the comparability of EBIT results between periods:

	<b>Year Ended December 31, 2010      2009 (Millions)</b>	
North America		
Restructuring and related expenses	\$ 14	\$ 17
Pension Charges(1)	6	
Environmental reserve(2)		5
Europe, South America and India		
Restructuring and related expenses	3	4
Asia Pacific		
Restructuring and related expenses	2	

- (1) Represents charges related to an actuarial loss for lump-sum pension payments in a non-qualified pension plan in which one current and three former employees were participants. Lump-sum pension payments are required when participants retire or when they turn 55. Two former employees turned 55 in 2010.
- (2) Represents a reserve related to environmental liabilities of a company Tenneco acquired in 1996, at locations never operated by Tenneco, and for which that acquired company had been indemnified by Mark IV Industries, which declared bankruptcy in the second quarter of 2009.

EBIT for North American operations was \$155 million in 2010, an increase of \$113 million from \$42 million one year ago. The benefits to EBIT from significantly higher OE production volumes, the related manufacturing efficiencies and improved aftermarket revenues were partially offset by higher selling, general, administrative and engineering costs, which included higher performance-based compensation costs, the temporary cost reduction efforts from 2009, which included employee furloughs and salary and benefit cuts, that were subsequently restored by the beginning of 2010, charges of \$6 million related to an actuarial loss for lump-sum pension payments and increased aftermarket changeover costs related to new aftermarket business. Currency had a \$13 million favorable impact on North American EBIT for 2010 when compared to 2009. Restructuring and related expenses of \$14 million were included in 2010 compared to \$17 million of restructuring and related expenses and an environmental reserve charge of \$5 million in 2009.

Our European, South American and Indian segment's EBIT was \$76 million for 2010, up \$56 million from \$20 million in 2009. The increase was driven by higher OE production volumes and the related manufacturing efficiencies, new platform launches, favorable platform mix in Europe and material cost management activities. Increased selling, general, administrative and engineering costs partially offset the increase. Restructuring and related expenses of \$3 million were included in EBIT for 2010, versus \$4 million from the same period last year. Currency had a \$13 million unfavorable impact on EBIT for 2010.

EBIT for our Asia Pacific segment, which includes Asia and Australia, increased \$20 million to \$50 million in 2010 from \$30 million in the prior year. Higher volumes and the related manufacturing efficiencies drove the EBIT improvement. This increase was partially offset by increased selling, general, administrative and engineering costs.

Currency had a \$1 million favorable impact on 2010 EBIT for our Asia Pacific segment.

Currency had a \$1 million favorable impact on overall company EBIT for 2010 as compared to the prior year.

**Table of Contents****EBIT for Years 2009 and 2008**

	<b>Year Ended December 31,</b>		<b>Change</b>
	<b>2009</b>	<b>2008 (Millions)</b>	
North America	\$ 42	\$ (107)	\$ 149
Europe, South America and India	20	85	(65)
Asia Pacific	30	19	11
	\$ 92	\$ (3)	\$ 95

The EBIT results shown in the preceding table include the following items, discussed below under **Restructuring and Other Charges** and **Liquidity and Capital Resources - Capitalization**, which have an effect on the comparability of EBIT results between periods:

	<b>Year Ended December 31,</b>	
	<b>2009</b>	<b>2008 (Millions)</b>
North America		
Restructuring and related expenses	\$ 17	\$ 16
Environmental reserve(1)	5	
New aftermarket customer changeover costs(2)		7
Goodwill impairment charge(3)		114
Europe, South America and India		
Restructuring and related expenses	4	22
Asia Pacific		
Restructuring and related expenses		2

- (1) Represents a reserve related to environmental liabilities of a company Tenneco acquired in 1996, at locations never operated by Tenneco, and for which that acquired company had been indemnified by Mark IV Industries, which declared bankruptcy in the second quarter of 2009.
- (2) Represents costs associated with changing new aftermarket customers from their prior suppliers to an inventory of our products. Although our aftermarket business regularly incurs changeover costs, we specifically identify in the table above those changeover costs that, based on the size or number of customers involved, we believe are of an unusual nature for the period which they were incurred.
- (3) Non-cash asset impairment charge related to goodwill for Tenneco's 1996 acquisition of Clevite Industries.

EBIT for North American operations was \$42 million in 2009, an increase of \$149 million from a loss of \$107 million in 2008. The benefits to EBIT from new platform launches, manufacturing efficiencies, reduced selling, general,

administrative and engineering spending, lower customer changeover costs, restructuring savings, impairment charge and customer recoveries were only partially offset by lower OE production volumes and the related manufacturing fixed cost absorption and increased restructuring and related expenses. Currency had a \$10 million favorable impact on North American EBIT. Restructuring and related expenses of \$17 million and an environmental charge of \$5 million were included in 2009. Restructuring and related costs of \$16 million, a goodwill impairment charge of \$114 million and changeover costs for new aftermarket customers of \$7 million were included in 2008 EBIT.

Our European, South American and Indian segment's EBIT was \$20 million for 2009, down \$65 million from \$85 million in 2008. Significant OE production volume declines, the related manufacturing fixed cost absorption and lower aftermarket sales drove the decline in EBIT. Currency further reduced EBIT by \$14 million. These decreases were partially offset by the impact of our new OE platform launches, improved pricing, favorable material costs, savings from our prior restructuring activities and reduced restructuring and

**Table of Contents**

related expenses. EBIT for 2009 included \$4 million of restructuring and related expenses compared to \$22 million in 2008.

EBIT for our Asia Pacific segment, which includes Asia and Australia, increased \$11 million to \$30 million in 2009 compared to \$19 million in 2008. Higher OE production volumes in Asia, restructuring savings, manufacturing cost improvements, material cost management and reduced restructuring and related expenses drove the improvement. Lower OE production volumes in Australia and the related manufacturing fixed cost absorption partially offset these improvements. Unfavorable currency of \$3 million impacted Asia Pacific's 2009 EBIT. Included in Asia Pacific's 2008 EBIT was \$2 million in restructuring and related expenses.

Currency had a \$7 million unfavorable impact on overall company EBIT for 2009 as compared to 2008.

***EBIT as a Percentage of Revenue for Years 2010, 2009 and 2008***

	<b>Year Ended December 31,</b>		
	<b>2010</b>	<b>2009</b>	<b>2008</b>
North America	6%	2%	(4)%
Europe, South America and India	3%	1%	3%
Asia Pacific	7%	6%	4%
Total Tenneco	5%	2%	

In North America, EBIT as a percentage of revenue for 2010 was up four percentage points when compared to last year. The increase in EBIT from higher OE production volumes and the related manufacturing efficiencies, decreased restructuring and related charges, higher aftermarket sales and favorable currency was partially offset as a percentage of revenue by higher selling, general, administrative and engineering expenses, including higher aftermarket changeover costs, higher performance-based compensation costs and charges for an actuarial loss for lump-sum pension payments. In Europe, South America and India, EBIT margin for 2010 was two percentage points higher than prior year due to improved volumes, the related manufacturing efficiencies, lower restructuring and related expenses, favorable platform mix and material cost management actions, partially offset by unfavorable currency and increased selling, general, administrative and engineering expenses. EBIT as a percentage of revenue for our Asia Pacific segment increased one percentage point in 2010 versus the prior year as higher volumes and the related manufacturing efficiencies were partially offset by increased selling, general, administrative and engineering expenses.

In North America, EBIT as a percentage of revenue for 2009 was up six percentage points from 2008. The benefits to EBIT from new platform launches, manufacturing efficiencies, reduced selling, general, administrative and engineering spending, lower customer changeover costs and goodwill impairment charges, favorable currency, restructuring savings and customer recoveries were only partially offset by lower OE production volumes, the related manufacturing fixed cost absorption and an environmental reserve. During 2009, North American results included higher restructuring and related charges. In Europe, South America and India, EBIT margin for 2009 was down two percentage points from 2008. Lower OE production volumes and the related manufacturing fixed cost absorption, aftermarket sales declines and unfavorable currency impact were partially offset by new platform launches, improved pricing, favorable material costs and savings from our prior restructuring activities. Restructuring and related expenses were lower in Europe, South America and India's 2009 EBIT compared to 2008. EBIT as a percentage of revenue for our Asia Pacific segment increased two percentage points in 2009 versus 2008. Higher OE production volumes in Asia, restructuring savings, manufacturing cost improvements, material cost management and reduced restructuring and related expenses drove the improvement which was partially offset by OE production volume decreases in

Australia and the related manufacturing fixed cost absorption and unfavorable currency. Asia Pacific 2009 results included lower restructuring and related expenses over 2008.

**Table of Contents*****Interest Expense, Net of Interest Capitalized***

We reported interest expense in 2010 of \$149 million net of interest capitalized of \$4 million (\$146 million in our U.S. operations and \$3 million in our foreign operations), up from \$133 million net of interest capitalized of \$4 million (\$130 million in our U.S. operations and \$3 million in our foreign operations) in 2009. Included in 2010 was \$27 million of expense related to our refinancing activities and \$4 million of expense related to an accounting change impacting our factored receivables. See *Liquidity and Capital Resources* below for further discussion of the accounting change. Excluding the refinancing expenses, interest expense decreased in 2010 compared to the prior year as a result of our lower average borrowings due to our operating cash performance and last year's equity offering.

We reported interest expense in 2009 of \$133 million net of interest capitalized of \$4 million (\$130 million in our U.S. operations and \$3 million in our foreign operations), up from \$113 million net of interest capitalized of \$6 million (\$111 million in our U.S. operations and \$2 million in our foreign operations) in 2008 primarily related to higher interest rates due to the amendment of the senior credit facility in February 2009. In addition, the requirement to mark to market our interest rate swaps decreased interest expense by \$7 million in 2008.

On December 31, 2010, we had \$1,011 million in long-term debt obligations that have fixed interest rates. \$20 million was fixed through November 2014, \$250 million is fixed through November 2015, \$225 million is fixed through August 2018, \$500 million is fixed through December 2020 and the remainder is fixed from 2011 through 2025. On January 7, 2011, we redeemed the remaining outstanding \$20 million principal amount of our 85/8 percent senior subordinated notes plus accrued and unpaid interest. We also have \$152 million in long-term debt obligations that are subject to variable interest rates. For more detailed explanations on our debt structure and senior credit facility refer to *Liquidity and Capital Resources - Capitalization* later in this Management's Discussion and Analysis.

***Income Taxes***

Income tax expense was \$69 million for 2010. The tax expense recorded for 2010 differs from a statutory rate of 35 percent due to tax charges of \$23 million primarily related to the impact of recording a valuation allowance against the tax benefit for losses in the U.S. and certain foreign jurisdictions and charges related to adjustments to prior year income taxes and tax contingencies, partially offset by income generated in lower tax rate jurisdictions. In 2009, we recorded income tax expense of \$13 million. Computed using the U.S. Federal statutory income tax rate of 35 percent, income tax would be a benefit of \$14 million. The difference is due primarily to valuation allowances against deferred tax assets generated by 2009 losses in the U.S. and in certain foreign countries which we cannot benefit, partially offset by adjustments to past valuation allowances for deferred tax assets including a reversal of \$20 million of U.S. valuation allowance based on the change in the fair value of a tax planning strategy. We reported income tax expense of \$289 million in 2008 which included \$244 million in tax charges primarily related to recording a valuation allowance against our U.S. deferred tax assets, repatriating cash from Brazil as a result of strong performance in South America over the past several years and changes in foreign tax rates.

***Restructuring and Other Charges***

Over the past several years, we have adopted plans to restructure portions of our operations. These plans were approved by our Board of Directors and were designed to reduce operational and administrative overhead costs throughout the business. Our Board of Directors approved a restructuring project in 2001, known as Project Genesis, which was designed to lower our fixed costs, relocate capacity, reduce our work force, improve efficiency and utilization, and better optimize our global footprint. We have subsequently engaged in various other restructuring projects related to Project Genesis. We incurred \$40 million in restructuring and related costs during 2008, of which \$17 million was recorded in cost of sales and \$23 million was recorded in selling, general, administrative and engineering expense. In 2009, we incurred \$21 million in restructuring and related costs, of which \$16 million was

recorded in cost of sales, \$1 million was recorded in selling, general, administrative and engineering expense and \$4 million was recorded in depreciation and amortization expense.

**Table of Contents**

In 2010, we incurred \$19 million in restructuring and related costs, of which \$14 million was recorded in cost of sales and \$5 million was recorded in depreciation and amortization expense.

Amounts related to activities that are part of our restructuring plans are as follows:

	December 31,		Impact	December 31,	
	2009	2010	of	2010	
	Restructuring	Cash	Exchange	Reserve	Restructuring
	Reserve	Payments	Rates	Adjustments	Reserve
			(Millions)		
Severance	\$ 15	(7)		(1)	\$ 7

Under the terms of our amended and extended senior credit agreement that took effect on June 3, 2010, we are allowed to exclude \$60 million of cash charges and expenses, before taxes, related to cost reduction initiatives incurred after June 3, 2010 from the calculation of the financial covenant ratios required under our senior credit facility. As of December 31, 2010, we have excluded \$9 million in cumulative allowable charges relating to restructuring initiatives against the \$60 million available under the terms of the senior credit facility.

On September 22, 2009, we announced that we will be closing our original equipment ride control plant in Cozad, Nebraska. We estimate this closing will generate \$8 million in annualized cost savings once completed, incremental to the \$58 million of savings related to our October 2008 restructuring announcement. We expect the elimination of 500 positions at the Cozad plant and expect to record up to \$21 million in restructuring and related expenses, of which approximately \$16 million represents cash expenditures. We originally planned to have completed the closing of this facility by the end of 2010, however, as a result of the faster than expected increase in light vehicle production in North America and to better optimize the transfer of some of the manufacturing activities, we plan to continue certain production lines through the first half of 2011. We plan to hire at other facilities as we move the production from Cozad to those facilities, resulting in a net decrease of approximately 60 positions. During 2009 we recorded \$11 million of restructuring and related expenses related to this initiative. For the twelve months ended December 31, 2010 we recorded \$10 million of restructuring and related expenses related to this initiative.

At December 31, 2010, our restructuring reserve in Europe was \$1 million which relates to a number of restructuring activities at certain European facilities.

***Earnings (Loss) Per Share***

We reported net income of \$39 million or \$0.63 per diluted common share for 2010. Included in the results for 2010 were negative impacts from expenses related to our restructuring activities, pension charges, costs related to our refinancing activities and tax adjustments. The net impact of these items decreased earnings per diluted share by \$0.94. We reported a net loss of \$73 million or \$1.50 per diluted common share for 2009. Included in the results for 2009 were negative impacts from expenses related to our restructuring activities, an environmental reserve and tax adjustments. The net impact of these items decreased earnings per diluted share by \$0.91. We reported a net loss of \$415 million or \$8.95 per diluted common share for 2008. Included in the results for 2008 were negative impacts from expenses related to our restructuring activities, new aftermarket customer changeover costs, a goodwill impairment charge and tax adjustments. The net impact of these items decreased earnings per diluted share by \$9.37.

***Dividends on Common Stock***

On January 10, 2001, our Board of Directors eliminated the quarterly dividend on our common stock. There are no current plans to reinstate a dividend on our common stock.

**Table of Contents*****Cash Flows for 2010 and 2009***

	<b>Year Ended December 31, 2010          2009 (Millions)</b>	
Cash provided (used) by:		
Operating activities	\$ 244	\$ 241
Investing activities	\$ (157)	(119)
Financing activities	\$ (30)	(87)

***Operating Activities***

For 2010, operating activities provided \$244 million in cash compared to \$241 million in cash during the same period last year. For 2010, cash used for working capital was \$71 million versus \$65 million of cash provided from working capital in 2009. Receivables were a use of cash of \$231 million compared to a cash use of \$8 million in the prior year. The change in cash flow from receivables was partially due to higher year-over-year sales and a change in accounting in the first quarter of 2010. This accounting change requires that North America accounts receivable securitization programs be accounted for as secured borrowings rather than as a sale of accounts receivables. As a result, funding from the North America accounts receivable securitization program is included in net cash provided by financing activities on the statement of cash flows and was previously reflected in net cash used by operating activities. See

Liquidity and Capital Resources below for further discussion of the accounting change. Inventory represented a cash outflow of \$122 million during 2010, compared to a cash inflow of \$101 million in the prior year. The year-over-year change to cash flow from inventory was primarily a result of higher OE production levels. The higher production environment also led to accounts payable providing cash of \$238 million in 2010, compared to a use of cash of \$2 million in the prior year. Cash taxes were \$53 million for 2010 compared to \$38 million in the prior year.

One of our European subsidiaries receives payment from one of its OE customers whereby the accounts receivable are satisfied through the delivery of negotiable financial instruments. We may collect these financial instruments before their maturity date by either selling them at a discount or using them to satisfy accounts receivable that have previously been sold to a European bank. Any of these financial instruments which are not sold are classified as other current assets as they do not meet our definition of cash equivalents. The amount of these financial instruments that were collected before their maturity date and sold at a discount totaled \$6 million as of December 31, 2010, compared with \$5 million at December 31, 2009. No negotiable financial instruments were held by our European subsidiary as of December 31, 2010 or 2009, respectively.

In certain instances several of our Chinese subsidiaries receive payment from OE customers and satisfy vendor payments through the receipt and delivery of negotiable financial instruments. Financial instruments used to satisfy vendor payables and not redeemed totaled \$8 million and \$15 million at December 31, 2010 and 2009, respectively, and were classified as notes payable. Financial instruments received from OE customers and not redeemed totaled \$11 million and \$15 million at December 31, 2010 and 2009, respectively. We classify financial instruments received from our OE customers as other current assets if issued by a financial institution of our customers or as customer notes and accounts, net if issued by our customer. We classified \$11 million and \$15 million in other current assets at December 31, 2010 and 2009, respectively. Some of our Chinese subsidiaries that issue their own negotiable financial instruments to pay vendors are required to maintain a cash balance if they exceed certain credit limits with the financial institution that guarantees those financial instruments. A restricted cash balance was not required at those Chinese subsidiaries at December 31, 2010 and 2009, respectively.

The negotiable financial instruments received by one of our European subsidiaries and some of our Chinese subsidiaries are checks drawn by our OE customers and guaranteed by their banks that are payable at a future date. The use of these instruments for payment follows local commercial practice. Because negotiable financial instruments are financial obligations of our customers and are guaranteed by our customers' banks, we believe they represent a lower financial risk than the outstanding accounts receivable that they satisfy which are not guaranteed by a bank.

**Table of Contents***Investing Activities*

Cash used for investing activities was \$38 million higher in 2010 compared to a year ago. Cash payments for plant, property, and equipment were \$151 million in 2010 versus payments of \$120 million in 2009, an increase of \$31 million. This increase was due to deferring discretionary projects in 2009, the investments for new business launches, technology development and future growth opportunities. Cash payments for software-related intangible assets were \$12 million in 2010 compared to \$6 million in 2009.

*Financing Activities*

Cash flow from financing activities was an outflow of \$30 million in 2010 compared to an outflow of \$87 million in 2009. The 2010 outflow was primarily due to debt issuance costs related to our refinancing activities. We used \$188 million in net proceeds from our common stock offering in 2009 to pay down debt, primarily borrowings against our revolving credit facility. We ended 2010 with no borrowings under our revolving credit facility. As mentioned above in the *Operating Activities* section of this cash flow discussion, cash flow from financing activities was impacted by the accounting change for the way we account for our North American accounts receivable securitization programs. At December 31, 2010, there were no borrowings outstanding under the North American accounts receivable securitization programs.

*Cash Flows for 2009 and 2008*

	<b>Year Ended December 31, 2009      2008 (Millions)</b>	
Cash provided (used) by:		
Operating activities	\$ 241	\$ 160
Investing activities	(119)	(261)
Financing activities	(87)	(58)

*Operating Activities*

In 2009, operating activities provided \$241 million in cash compared to \$160 million in cash provided during 2008. In 2009, working capital provided cash of \$65 million versus a cash use of \$31 million in 2008. Receivables were a use of cash of \$8 million compared to cash provided by receivables of \$126 million in 2008. This decrease in cash flow from receivables was attributable to the revenue decline in the fourth quarter of 2008 as compared to the revenue increase in the fourth quarter of 2009 combined with reduced cash flow from factored receivables which decreased receivable collections by \$42 million in 2009 compared to \$22 million in increased collections of receivables for 2008. Inventory cash flow improved by \$82 million as a result of our inventory management efforts. Accounts payable used cash of \$2 million compared to \$181 million in 2008, an improvement of \$179 million. Cash taxes were \$38 million for 2009, compared to \$62 million in 2008, reflecting lower 2009 taxable income in jurisdictions where we were taxpayers.

One of our European subsidiaries receives payment from one of its OE customers whereby the accounts receivable are satisfied through the delivery of negotiable financial instruments. We may collect these financial instruments before their maturity date by either selling them at a discount or using them to satisfy accounts receivable that have previously been sold to a European bank. Any of these financial instruments which are not sold are classified as other

current assets as they do not meet our definition of cash equivalents. The amount of these financial instruments that were collected before their maturity date and sold at a discount totaled \$5 million as of December 31, 2009, compared with \$23 million at December 31, 2008. No negotiable financial instruments were held by our European subsidiary as of December 31, 2009 or 2008, respectively.

In certain instances several of our Chinese subsidiaries receive payment from OE customers and satisfy vendor payments through the receipt and delivery of negotiable financial instruments. Financial instruments used to satisfy vendor payables and not redeemed totaled \$15 million and \$6 million at December 31, 2009 and 2008, respectively, and were classified as notes payable. Financial instruments received from OE

## **Table of Contents**

customers and not redeemed totaled \$15 million and \$6 million at December 31, 2009 and 2008, respectively, and were classified as other current assets. Some of our Chinese subsidiaries that issue their own negotiable financial instruments to pay vendors are required to maintain a cash balance if they exceed certain credit limits with the financial institution that guarantees those financial instruments. A restricted cash balance was not required at those Chinese subsidiaries at December 31, 2009 and 2008, respectively.

The negotiable financial instruments received by one of our European subsidiaries and some of our Chinese subsidiaries are checks drawn by our OE customers and guaranteed by their banks that are payable at a future date. The use of these instruments for payment follows local commercial practice. Because negotiable financial instruments are financial obligations of our customers and are guaranteed by our customers' banks, we believe they represent a lower financial risk than the outstanding accounts receivable that they satisfy which are not guaranteed by a bank.

### *Investing Activities*

Cash used for investing activities was \$142 million lower in 2009 compared to 2008. Cash payments for plant, property and equipment were \$120 million in 2009 versus payments of \$233 million in 2008, a reduction of \$113 million. This reduction was due to deferring discretionary projects, redeploying assets and using existing capacity while continuing to make the investments needed for new business launches, technology development and future growth opportunities. Cash of \$19 million was used to acquire ride control assets at Delphi's Kettering, Ohio location during 2008. Also in 2008, we acquired Gruppo Marzocchi which resulted in a \$3 million cash inflow (\$1 million cash consideration paid, net of \$4 million cash acquired). Cash payments for software-related intangible assets were \$6 million in 2009 compared to \$15 million in 2008.

### *Financing Activities*

Cash flow from financing activities was an outflow of \$87 million in the fourth quarter of 2009 compared to an inflow of \$58 million in 2008. We used the \$188 million in net proceeds from our common stock offering in the fourth quarter of 2009 to pay down debt, primarily borrowings against our revolving credit facility. We ended 2009 with no borrowings under our revolving credit facility.

## **Outlook**

We are well positioned to deliver revenue growth in 2011 as we launch new business, ramp up programs that have already launched, help our customers meet stricter emissions standards for both on-road and non-road vehicles and take advantage of volume increases while continuing to benefit from cost reductions and operational improvements. We estimate that our global original equipment revenues will be approximately \$5.9 billion in 2011 and \$7.1 billion in 2012 with substrate sales making up 29 percent of total OE revenue each year. We expect our global original equipment revenue to increase to between \$9.5 billion and \$11 billion by 2015, with substrate sales comprising 32 percent of total OE revenue.

Between 2009 and 2012, we are launching multiple programs with thirteen different commercial vehicle customers, both truck and engine manufacturers, to help customers meet new emissions regulations for on-road and non-road commercial vehicles. We began to launch some of these programs in China at the end of 2009 with China National Heavy Truck Company, Shanghai Diesel Engine Company and Weichai Power. Programs in North America, Europe and South America primarily began to launch in the second half of 2010. Our commercial vehicle emission control customers also include Caterpillar, John Deere, Navistar, FAW, Deutz and Guangxi Yuchai Machinery Company as well as four customers who will be announced as programs launch. We will also be supplying diesel aftertreatment systems, including selective catalytic reduction, for next generation heavy-duty pick-up trucks in North America. Based on the current commercial vehicle production forecasts mentioned above, we project that our commercial and

specialty vehicle revenue to be

**Table of Contents**

\$0.8 billion in 2011 and \$1.6 billion in 2012 and account for about 30 percent to 35 percent of our global original equipment revenue by 2015.

The revenue estimates presented in this Outlook are based on volume projections summarized in the following chart and on original equipment manufacturers' programs that have been formally awarded to the company; programs where the company is highly confident that it will be awarded business based on informal customer indications consistent with past practices; our status as supplier for existing programs and our relationships and experience with the customer; and the actual original equipment revenues achieved by the company for each of the last several years compared to the amount of those revenues that the company estimated it would generate at the beginning of each year. Our revenue estimates are subject to increase or decrease due to changes in customer requirements, customer and consumer preferences, and the number of vehicles actually produced by our customers. We update these estimates annually. In the interim we do not intend to otherwise update the estimates to reflect future changes in these assumptions. In addition, our revenue estimate is based on our anticipated pricing for each applicable program over its life. However, we are under continuing pricing pressures from our OE customers. We do not intend to update the amounts shown above for any price changes. Finally, for our foreign operations, our revenue estimate assumes fixed foreign currency values relative to the U.S. dollar. These values are used to translate foreign revenues to the U.S. dollar. Although such currency values are subject to fluctuations based on the economic conditions in each of our foreign operations, we do not intend to update the annual revenue estimates shown above due to these fluctuations. See Cautionary Statement for Purposes of the Safe Harbor Provisions of the Private Securities Litigation Reform Act of 1995 and Item 1A, Risk Factors.

We anticipate that the global aftermarket for 2011 will continue to be a strong contributor to our business. We will continue to support our strong brands and aggressively pursue new customers, actions that we hope will help expand our market share globally.

We expect our capital expenditures for 2011 to be approximately \$190 million to \$210 million. We expect our 2011 interest expense to be about \$105 million and our 2011 cash taxes to range between \$75 million and \$90 million.

**Table of Contents*****Liquidity and Capital Resources******Capitalization***

	<b>Year Ended December 31,</b>		
	<b>2010</b>	<b>2009</b>	<b>% Change</b>
	<b>(Millions)</b>		
Short-term debt and maturities classified as current	\$ 63	\$ 75	(16)%
Long-term debt	1,160	1,145	1
Total debt	1,223	1,220	
Total redeemable noncontrolling interests	12	7	71
Total noncontrolling interests	39	32	22
Tenneco Inc. shareholders' equity	(4)	(21)	81
Total equity	35	11	218
Total capitalization	\$ 1,270	\$ 1,238	(3)

*General.* Short-term debt, which includes maturities classified as current and borrowings by foreign subsidiaries, was \$63 million and \$75 million as of December 31, 2010 and 2009, respectively. We had no borrowings outstanding under our revolving credit facilities, which would otherwise be classified as long-term debt, as of December 31, 2010 and, 2009, respectively.

The 2010 year-to-date increase in total equity primarily resulted from net income attributable to Tenneco Inc. of \$39 million, a \$14 million increase in premium on common stock and other capital surplus relating to common stock issued pursuant to benefit plans, offset by a \$24 million decrease caused by the impact of changes in foreign exchange rates on the translation of financial statements of our foreign subsidiaries into U.S. dollars, a net decrease in premium on common stock and other capital surplus relating to a \$11 million purchase of an additional 20 percent of equity interest from a Chinese noncontrolling joint venture partner and a \$1 million decrease in additional liability for pension and postretirement benefits.

*Overview.* Our financing arrangements are primarily provided by a committed senior secured financing arrangement with a syndicate of banks and other financial institutions. The arrangement is secured by substantially all our domestic assets and pledges of up to 66 percent of the stock of certain first-tier foreign subsidiaries, as well as guarantees by our material domestic subsidiaries.

On June 3, 2010 we completed an amendment and extension of our senior secured credit facility by extending the term of our revolving credit facility and replacing our \$128 million term loan A with a larger and longer maturity term loan B facility. As a result of the amendment and extension, as of December 31, 2010, the senior credit facility provides us with a total revolving credit facility size of \$622 million until March 16, 2012, when commitments of \$66 million will expire. After March 16, 2012, the extended revolving credit facility will provide \$556 million of

revolving credit and will mature on May 31, 2014. The extended facility will mature earlier on December 15, 2013, if our \$130 million tranche B-1 letter of credit/revolving loan facility is not refinanced by that date. Prior to maturity, funds may be borrowed, repaid and re-borrowed under the two revolving credit facilities without premium or penalty. The leverage ratio (consolidated indebtedness net of cash divided by consolidated EBITDA as defined in the senior credit facility agreement) was decreased from 5.00 to 4.50 for the second quarter of 2010; from 4.75 to 4.25 for the third quarter of 2010; and from 4.50 to 4.25 for the fourth quarter of 2010 as a result of the June 3, 2010 amendment.

As of December 31, 2010, the senior credit facility also provides a six-year, \$150 million term loan B maturing in June 2016, and a seven-year \$130 million tranche B-1 letter of credit/revolving loan facility maturing in March 2014. We are required to make quarterly principal payments of \$375 thousand on the term loan B, beginning on September 30, 2010 through March 31, 2016 with a final payment of \$141 million due June 3, 2016. The tranche B-1 letter of credit/revolving loan facility requires repayment by March 2014. We can enter into revolving loans and issue letters of credit under the \$130 million tranche B-1 letter of credit/

**Table of Contents**

revolving loan facility. The tranche B-1 letter of credit/revolving loan facility is reflected as debt on our balance sheet only if we borrow money under this facility or if we use the facility to make payments for letters of credit. There is no additional cost to us for issuing letters of credit under the tranche B-1 letter of credit/revolving loan facility. However, outstanding letters of credit reduce our availability to enter into revolving loans under the facility. We pay the tranche B-1 lenders interest equal to LIBOR plus a margin on all borrowings under the facility. Funds deposited with the administrative agent by the lenders and not borrowed by the Company earn interest at an annual rate approximately equal to LIBOR less 25 basis points.

Beginning June 3, 2010 our term loan B and revolving credit facility, bear interest at an annual rate equal to, at our option, either (i) the London Interbank Offered Rate plus a margin of 475 and 450 basis points, respectively, or (ii) a rate consisting of the greater of (a) the JPMorgan Chase prime rate plus a margin of 375 and 350 basis points, respectively, (b) the Federal Funds rate plus 50 basis points plus a margin of 375 and 350 basis points, respectively, and (c) the Eurodollar Rate plus 100 basis points plus a margin of 375 and 350 basis points, respectively. The margin we pay on these borrowings will be reduced by 25 basis points following each fiscal quarter for which our consolidated net leverage ratio is less than 2.25 for extending lenders and for the term loan B and will be further reduced by an additional 25 basis points following each fiscal quarter for which the consolidated net leverage ratio is less than 2.0 for extending lenders. The margin we pay on these borrowings for extending lenders will increase by 50 basis points following each fiscal quarter for which our consolidated net leverage ratio is greater than or equal to 4.0 and will be further increased by an additional 50 basis points following each fiscal quarter for which the consolidated net leverage ratio is greater than or equal to 5.0. Our consolidated net leverage ratio was 2.24 as of December 31, 2010. Accordingly, in March of 2011 the margin we pay on these borrowings will be reduced by 25 basis points for extending lenders and will remain at such level for so long as our consolidated net leverage ratio remains below 2.25 and greater than or equal to 2.0.

The margin we pay on borrowings under our tranche B-1 facility incurred interest at an annual rate equal to, at our option, either (i) the London Interbank Offered Rate plus a margin of 500 basis points, or (ii) a rate consisting of the greater of (a) the JPMorgan Chase prime rate plus a margin of 400 basis points, (b) the Federal Funds rate plus 50 basis points plus a margin of 400 basis points, and (c) the Eurodollar Rate plus 100 basis points plus a margin of 400 basis points. The rate will increase by 50 basis points following each fiscal quarter for which our consolidated net leverage ratio is greater than or equal to 5.0.

At December 31, 2010, we had unused borrowing capacity of \$699 million under the \$752 million amount available under the two revolving credit facilities within our senior secured credit facility with no outstanding borrowings and \$53 million in letters of credit outstanding. As of December 31, 2010 our outstanding debt also includes \$20 million of 85/8 percent subordinated notes due January 7, 2011, \$250 million of 81/8 percent senior notes due November 15, 2015, \$149 million term loan B due June 3, 2016, \$225 million of 73/4 percent senior notes due August 15, 2018, \$500 million of 67/8 percent senior notes due December 15, 2020, and \$78 million of other debt.

On December 9, 2010, we commenced a cash tender offer of our outstanding \$500 million 85/8 percent senior subordinated notes due in 2014 and a consent solicitation to amend the indenture governing these notes. The consent solicitation expired on December 22, 2010 and the cash tender offer expired on January 6, 2011. On December 23, 2010, we issued \$500 million of 67/8 percent senior notes due December 15, 2020. The net proceeds of this transaction, together with cash and available liquidity, was used to finance the purchase of our 85/8 percent senior subordinated notes pursuant to the tender offer at a price of 103.25 percent of the principal amount, plus accrued and unpaid interest for holders who tendered prior to the expiration of the consent solicitation, and 100.25 percent of the principal amount, plus accrued and unpaid interest, for other participants. On January 7, 2011, we redeemed all remaining senior subordinated notes that were not previously tendered at a price of 102.875 percent of the principal amount, plus accrued and unpaid interest. To facilitate these transactions, we amended our senior credit agreement to permit us to refinance our senior subordinated notes with new senior unsecured notes. We did not incur any fee in

connection with this amendment. The new notes are general senior obligations of Tenneco Inc. and are not secured by assets of Tenneco Inc. or the guarantors. We recorded \$20 million of pre-tax charges in December 2010 and expect to

**Table of Contents**

record an additional \$1 million of pre-tax charges in the first quarter of 2011 related to our repurchase and redemption of our 85/8 percent senior subordinated notes.

On August 3, 2010 we issued \$225 million of 73/4 percent senior notes due August 15, 2018 in a private offering. The net proceeds of this transaction, together with cash and available liquidity, was used to finance the redemption of our 101/4 percent senior secured notes due in 2013. We called the senior secured notes for redemption on August 3, 2010, and completed the redemption on September 2, 2010 at a price of 101.708 percent of the principal amount, plus accrued and unpaid interest. We recorded \$5 million of expense related to our redemption of our 101/4 percent senior secured notes in the third quarter of 2010. The new notes are general senior obligations of Tenneco Inc. and are not secured by assets of Tenneco Inc. or the guarantors.

*Senior Credit Facility Interest Rates and Fees.* Borrowings and letters of credit issued under the senior credit facility bear interest at an annual rate equal to, at our option, either (i) the London Interbank Offered Rate plus a margin as set forth in the table below; or (ii) a rate consisting of the greater of the JPMorgan Chase prime rate, the Federal Funds rate plus 50 basis points or the Eurodollar Rate plus 100 basis points, plus a margin as set forth in the table below:

	<b>12/24/2008</b>	<b>2/23/2009</b>	<b>3/2/2009</b>	<b>5/15/2009</b>	<b>8/14/2009</b>	<b>3/1/2010</b>	<b>Beginning</b>

Commitment Fee	0.50%	0.75%	0.50%	0.50%	0.75%	0.50%	0.75%

*Senior Credit Facility Other Terms and Conditions.* Our senior credit facility requires that we maintain financial ratios equal to or better than the following consolidated net leverage ratio (consolidated indebtedness net of cash divided by consolidated EBITDA, as defined in the senior credit facility agreement), and consolidated interest coverage ratio (consolidated EBITDA divided by consolidated interest expense, as

**Table of Contents**

defined under the senior credit facility agreement) at the end of each period indicated. Failure to maintain these ratios will result in a default under our senior credit facility. The financial ratios required under the amended and restated senior credit facility and, the actual ratios we achieved for four quarters of 2010, are as follows:

	Quarter Ended							
	March 31, 2010		June 30, 2010		September 30, 2010		December 31, 2010	
	Req.	Act.	Req.	Act.	Req.	Act.	Req.	Act.
Leverage Ratio (maximum)	5.50	2.77	4.50	2.42	4.25	2.41	4.25	2.24
Interest Coverage Ratio (minimum)	2.00	3.04	2.25	3.70	2.30	3.97	2.35	3.99

The financial ratios required under the senior credit facility for 2011 and beyond are set forth below.

Period Ending	Leverage Ratio	Interest Coverage Ratio
March 31, 2011	4.00	2.55
June 30, 2011	3.75	2.55
September 30, 2011	3.50	2.55
December 31, 2011	3.50	2.55
Each quarter thereafter	3.50	2.75

The covenants in our senior credit facility agreement generally prohibit us from repaying or refinancing our senior notes. So long as no default existed, we would, however, under our senior credit facility agreement, be permitted to repay or refinance our senior notes: (i) with the net cash proceeds of incremental facilities and permitted refinancing indebtedness (as defined in the senior credit facility agreement); (ii) with the net cash proceeds from the sale of shares of our common stock; (iii) in exchange for permitted refinancing indebtedness or in exchange for shares of our common stock; (iv) with the net cash proceeds of any new senior or subordinated unsecured indebtedness; (v) with the proceeds of revolving credit loans (as defined in the senior credit facility agreement); (vi) with the cash generated by the operations of the company; and (vii) in an amount equal to the sum of (A) the net cash proceeds of qualified stock issued by the Company after March 16, 2007, plus (B) the portion of annual excess cash flow (beginning with excess cash flow for fiscal year 2010) not required to be applied to payment of the credit facilities and which is not used for other purposes, provided that the aggregate principal amount of senior notes purchased and cancelled or redeemed pursuant to clauses (v), (vi) and (vii), is capped as follows based on the pro forma consolidated leverage ratio after giving effect to such purchase, cancellation or redemption:

Proforma Consolidated Leverage Ratio	Aggregate Senior Note Maximum Amount (Millions)
Greater than or equal to 3.0x	\$ 20
Greater than or equal to 2.5x	\$ 100

Less than 2.5x

\$ 125

Although the senior credit facility agreement would permit us to repay or refinance our senior notes under the conditions described above, any repayment or refinancing of our outstanding notes would be subject to market conditions and either the voluntary participation of noteholders or our ability to redeem the notes under the terms of the applicable note indenture. For example, while the senior credit agreement would allow us to repay our outstanding notes via a direct exchange of the notes for either permitted refinancing indebtedness or for shares of our common stock, we do not, under the terms of the agreements governing our outstanding notes, have the right to refinance the notes via any type of direct exchange.

The senior credit facility agreement also contains other restrictions on our operations that are customary for similar facilities, including limitations on: (i) incurring additional liens; (ii) sale and leaseback transactions (except for the permitted transactions as described in the senior credit facility agreement); (iii) liquidations and dissolutions; (iv) incurring additional indebtedness or guarantees; (v) investments and acquisitions;

**Table of Contents**

(vi) dividends and share repurchases; (vii) mergers and consolidations; and (viii) refinancing of the senior notes. Compliance with these requirements and restrictions is a condition for any incremental borrowings under the senior credit facility agreement and failure to meet these requirements enables the lenders to require repayment of any outstanding loans. As of December 31, 2010, we were in compliance with all the financial covenants and operational restrictions of the facility. Our senior credit facility does not contain any terms that could accelerate payment of the facility or affect pricing under the facility as a result of a credit rating agency downgrade.

*Senior and Subordinated Notes.* As of December 31, 2010, our outstanding debt also includes \$20 million of 85/8 percent senior subordinated notes due January 7, 2011, \$250 million of 81/8 percent senior notes due November 15, 2015, \$225 million of 73/4 percent senior notes due August 15, 2018 and \$500 million of 67/8 percent senior notes due December 15, 2020. Under the indentures governing the notes, we are permitted to redeem some or all of the remaining senior notes at any time after November 15, 2011 in the case of the senior notes due 2015, August 14, 2014 in the case of the senior notes due 2018, and December 15, 2015 in the case of senior notes due 2020. On January 7, 2011, we redeemed all remaining senior subordinated notes at a price of 102.875 percent of principal amount plus accrued and unpaid interest. If we sell certain of our assets or experience specified kinds of changes in control, we must offer to repurchase the notes. Under the indentures governing the notes, we are permitted to redeem up to 35 percent of the senior notes due 2018, with the proceeds of certain equity offerings completed before August 13, 2013 and up to 35 percent of the senior notes due 2020, with the proceeds of certain equity offerings completed before December 15, 2013.

Our senior notes require that, as a condition precedent to incurring certain types of indebtedness not otherwise permitted, our consolidated fixed charge coverage ratio, as calculated on a pro forma basis, be greater than 2.00. The indentures also contain restrictions on our operations, including limitations on: (i) incurring additional indebtedness or liens; (ii) dividends; (iii) distributions and stock repurchases; (iv) investments; (v) asset sales and (vi) mergers and consolidations. Subject to limited exceptions, all of our existing and future material domestic wholly owned subsidiaries fully and unconditionally guarantee these notes on a joint and several basis. There are no significant restrictions on the ability of the subsidiaries that have guaranteed these notes to make distributions to us. As of December 31, 2010, we were in compliance with the covenants and restrictions of these indentures.

*Accounts Receivable Securitization.* We also securitize some of our accounts receivable on a limited recourse basis in North America and Europe. As servicer under these accounts receivable securitization programs, we are responsible for performing all accounts receivable administration functions for these securitized financial assets including collections and processing of customer invoice adjustments. In North America, we have an accounts receivable securitization program with three commercial banks. We securitize original equipment and aftermarket receivables on a daily basis under the bank program. We had no outstanding third party investments in our securitized accounts receivable bank program as of December 31, 2010 and \$62 million at December 31, 2009. In February 2010, the North American program was amended and extended to February 18, 2011, at a maximum facility size of \$100 million. As part of this renewal, the margin we pay to our banks decreased. In March 2010, the North American program was further amended to extend the revolving terms of the program to March 25, 2011, add an additional bank and increase the available financing under the facility by \$10 million to a new maximum of \$110 million. In addition, we added a second priority facility to the North American program, which provides up to an additional \$40 million of financing against accounts receivable generated in the U.S. or Canada that would otherwise be ineligible under the existing securitization facility. This new second priority facility also expires on March 25, 2011, and is subordinated to the existing securitization facility.

Each facility contains customary covenants for financings of this type, including restrictions related to liens, payments, mergers or consolidation and amendments to the agreements underlying the receivables pool. Further, each facility may be terminated upon the occurrence of customary events (with customary grace periods, if applicable), including breaches of covenants, failure to maintain certain financial ratios, inaccuracies of representations and

warranties, bankruptcy and insolvency events, certain changes in the rate of default or delinquency of the receivables, a change of control and the entry or other enforcement of material judgments. In addition, each facility contains cross-default provisions, where the facility could be terminated in the event

**Table of Contents**

of non-payment of other material indebtedness when due and any other event which permits the acceleration of the maturity of material indebtedness.

We also securitize receivables in our European operations with regional banks in Europe. The amount of outstanding third party investments in our securitized accounts receivable in Europe was \$91 million and \$75 million at December 31, 2010 and December 31, 2009, respectively. The arrangements to securitize receivables in Europe are provided under seven separate facilities provided by various financial institutions in each of the foreign jurisdictions. The commitments for these arrangements are generally for one year, but some may be cancelled with notice 90 days prior to renewal. In some instances, the arrangement provides for cancellation by the applicable financial institution at any time upon 15 days, or less, notification.

If we were not able to securitize receivables under either the North American or European securitization programs, our borrowings under our revolving credit agreements might increase. These accounts receivable securitization programs provide us with access to cash at costs that are generally favorable to alternative sources of financing, and allow us to reduce borrowings under our revolving credit agreements.

We adopted the amended accounting guidance under ASC Topic 860, Accounting for Transfers of Financial Assets effective January 1, 2010. Prior to the adoption of this new guidance, we accounted for activities under our North American and European accounts receivable securitization programs as sales of financial assets to our banks. The new accounting guidance changed the conditions that must be met for the transfer of financial assets to be accounted for as a sale. The new guidance adds additional conditions that must be satisfied for transfers of financial assets to be accounted for as sales when the transferor has not transferred the entire original financial asset, including the requirement that no partial interest holder have rights in the transferred asset that are subordinate to the rights of other partial interest holders. In our North American accounts receivable securitization programs, we transfer a partial interest in a pool of receivables and the interest that we retain is subordinate to the transferred interest. Accordingly, beginning January 1, 2010, we account for our North American securitization program as a secured borrowing. In our European programs we transfer accounts receivables in their entirety to the acquiring entities and satisfy all of the conditions established under amended ASC Topic 860 to report the transfer of financial assets in their entirety as a sale. The fair value of assets received as proceeds in exchange for the transfer of accounts receivable under our European securitization programs approximates the fair value of such receivables. We recognized \$4 million in interest expense in 2010 relating to our North American securitization program which effective January 1, 2010, is accounted for as a secured borrowing arrangement under the amended accounting guidance for transfers of financial assets. In addition, we recognized a loss of \$3 million, \$9 million and \$10 million for the years ended 2010, 2009 and 2008, respectively, on the sale of trade accounts receivable in both the North American and European accounts receivable securitization programs, representing the discount from book values at which these receivables were sold to our banks. The discount rate varies based on funding costs incurred by our banks, which averaged approximately four percent during 2010.

The impact of the new accounting rules on our consolidated financial statements includes an increase of \$4 million in interest expense and a corresponding decrease in loss on sale of receivables on our income statement in 2010. In 2010, there was no cash flow impact as a result of the new accounting rules. Funding levels provided by our European securitization programs continue to be reflected as a change in receivables and included in net cash provided (used) by operating activities as under the previous accounting rules. Had the new accounting rules been in effect prior to 2010, reported receivables and short-term debt would both have been \$62 million higher as of December 31, 2009. The loss on sale of receivables would have been \$5 million lower, offset by a corresponding \$5 million increase to interest expense for 2009. The loss on sales of receivables would have been \$4 million lower, offset by a corresponding \$4 million increase to interest expense for 2008. Additionally, our cash provided (used) by operations would have decreased by \$62 million with a corresponding increase in cash provided by financing activities for the same amount for 2009.

*Capital Requirements.* We believe that cash flows from operations, combined with our cash on hand and available borrowing capacity described above, assuming that we maintain compliance with the financial covenants and other requirements of our loan agreement, will be sufficient to meet our future capital requirements, including debt amortization, capital expenditures, pension contributions, and other operational

**Table of Contents**

requirements, for the following year. Our ability to meet the financial covenants depends upon a number of operational and economic factors, many of which are beyond our control. In the event that we are unable to meet these financial covenants, we would consider several options to meet our cash flow needs. Such actions include additional restructuring initiatives and other cost reductions, sales of assets, reductions to working capital and capital spending, issuance of equity and other alternatives to enhance our financial and operating position. Should we be required to implement any of these actions to meet our cash flow needs, we believe we can do so in a reasonable time frame.

*Contractual Obligations.*

Our remaining required debt principal amortization and payment obligations under lease and certain other financial commitments as of December 31, 2010 are shown in the following table:

	<b>Payments due in:</b>						<b>Total</b>
	<b>2011(a)</b>	<b>2012</b>	<b>2013</b>	<b>2014</b>	<b>2015</b>	<b>Beyond 2015</b>	
	<b>(Millions)</b>						
Obligations:							
Revolver borrowings	\$	\$	\$	\$	\$	\$	\$
Senior term loans	2	2	2	2	2	139	149
Senior subordinated notes	20						20
Senior notes					250	725	975
Customer notes	1	1	2				4
Capital leases	1						1
Other subsidiary debt	1	1	1	1	1	7	12
Short-term debt	61						61
Debt and capital lease obligations	86	4	5	3	253	871	1,222
Operating leases	26	19	13	8	5	17	88
Interest payments	104	97	84	60	73	366	784
Capital commitments	48						48
<b>Total Payments</b>	<b>\$ 264</b>	<b>\$ 120</b>	<b>\$ 102</b>	<b>\$ 71</b>	<b>\$ 331</b>	<b>\$ 1,254</b>	<b>\$ 2,142</b>

Note: (a) We have included in the 2011 payments, the redemption of all of the outstanding 85/8 percent senior subordinated notes that were not previously tendered.

If we do not maintain compliance with the terms of our senior credit facility or senior notes indentures described above, all amounts under those arrangements could, automatically or at the option of the lenders or other debt holders, become due. Additionally, each of those facilities contains provisions that certain events of default under one facility will constitute a default under the other facility, allowing the acceleration of all amounts due. We currently expect to maintain compliance with the terms of all of our various credit agreements for the foreseeable future.

Included in our contractual obligations is the amount of interest to be paid on our long-term debt. As our debt structure contains both fixed and variable rate obligations, we have made assumptions in calculating the amount of future interest payments. Interest on our senior subordinated notes and senior notes is calculated using the fixed rates of

73/4 percent, 67/8 percent, and 81/8 percent respectively. Interest on our variable rate debt is calculated as LIBOR plus the applicable margin in effect at December 31, 2010 for the Eurodollar, term loan B and tranche B-1 loans and prime plus the applicable margin in effect on December 31, 2010 on the prime-based loans. We have assumed that both LIBOR and the prime rate will remain unchanged for the outlying years. See Capitalization.

We have also included an estimate of expenditures required after December 31, 2010 to complete the projects authorized at December 31, 2010, in which we have made substantial commitments in connection

## **Table of Contents**

with purchasing plant, property and equipment for our operations. For 2011, we expect our capital expenditures to be about \$190 million to \$210 million.

We have not included purchase obligations as part of our contractual obligations as we generally do not enter into long-term agreements with our suppliers. In addition, the agreements we currently have do not specify the volumes we are required to purchase. If any commitment is provided, in many cases the agreements state only the minimum percentage of our purchase requirements we must buy from the supplier. As a result, these purchase obligations fluctuate from year-to-year and we are not able to quantify the amount of our future obligations.

We have not included material cash requirements for unrecognized tax benefits or taxes as we are a taxpayer in certain foreign jurisdictions, but not in the U.S. Additionally, it is difficult to estimate taxes to be paid as changes in where we generate income can have a significant impact on future tax payments. We have also not included cash requirements for funding pension and postretirement benefit costs. Based upon current estimates, we believe we will be required to make contributions of approximately \$54 million to those plans in 2011. Pension and postretirement contributions beyond 2011 will be required but those amounts will vary based upon many factors, including the performance of our pension fund investments during 2011. For additional information relating to the funding of our pension and other postretirement plans, refer to footnote 10 of our notes to consolidated financial statements. In addition, we have not included cash requirements for environmental remediation. Based upon current estimates we believe we will be required to spend approximately \$21 million over the next 30 years. However, due to possible modifications in remediation processes and other factors, it is difficult to determine the actual timing of the payments. See

Environmental and Other Matters.

We occasionally provide guarantees that could require us to make future payments in the event that the third party primary obligor does not make its required payments. We have not recorded a liability for any of these guarantees.

Additionally, we have from time to time issued guarantees for the performance of obligations by some of our subsidiaries, and some of our subsidiaries have guaranteed our debt. All of our existing and future material domestic wholly-owned subsidiaries fully and unconditionally guarantee our senior credit facility and our senior notes on a joint and several basis. The arrangement for the senior credit facility is also secured by first-priority liens on substantially all our domestic assets and pledges of up to 66 percent of the stock of certain first-tier foreign subsidiaries. You should also read Note 13 of the consolidated financial statements of Tenneco Inc., where we present the Supplemental Guarantor Condensed Consolidating Financial Statements.

We have issued guarantees through letters of credit in connection with some obligations of our affiliates. As of December 31, 2010, we have \$53 million in letters of credit to support some of our subsidiaries' insurance arrangements, foreign employee benefit programs, environmental remediation activities and cash management and capital requirements.

### ***Critical Accounting Policies***

We prepare our consolidated financial statements in accordance with accounting principles generally accepted in the United States of America. Preparing our consolidated financial statements in accordance with generally accepted accounting principles requires us to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. The following paragraphs include a discussion of some critical areas where estimates are required.

#### ***Revenue Recognition***

We recognize revenue for sales to our original equipment and aftermarket customers when title and risk of loss passes to the customers under the terms of our arrangements with those customers, which is usually at the time of shipment from our plants or distribution centers. Generally, in connection with the sale of exhaust systems to certain original equipment manufacturers, we purchase catalytic converters and diesel particulate

**Table of Contents**

filters or components thereof including precious metals ( substrates ) on behalf of our customers which are used in the assembled system. These substrates are included in our inventory and passed through to the customer at our cost, plus a small margin, since we take title to the inventory and are responsible for both the delivery and quality of the finished product. Revenues recognized for substrate sales were \$1,297 million, \$966 million and \$1,492 million for 2010, 2009 and 2008, respectively. For our aftermarket customers, we provide for promotional incentives and returns at the time of sale. Estimates are based upon the terms of the incentives and historical experience with returns. Certain taxes assessed by governmental authorities on revenue producing transactions, such as value added taxes, are excluded from revenue and recorded on a net basis. Shipping and handling costs billed to customers are included in revenues and the related costs are included in cost of sales in our Statements of Income (Loss).

*Warranty Reserves*

Where we have offered product warranty, we also provide for warranty costs. Provisions for estimated expenses related to product warranty are made at the time products are sold or when specific warranty issues are identified on OE products. These estimates are established using historical information about the nature, frequency, and average cost of warranty claims and upon specific warranty issues as they arise. The warranty terms vary but range from one year up to limited lifetime warranties on some of our premium aftermarket products. We actively study trends of our warranty claims and take action to improve product quality and minimize warranty claims. While we have not experienced any material differences between these estimates and our actual costs, it is reasonably possible that future warranty issues could arise that could have a significant impact on our consolidated financial statements.

*Engineering, Research and Development*

We expense engineering, research, and development costs as they are incurred. Engineering, research, and development expenses were \$117 million for 2010, \$97 million for 2009 and \$127 million for 2008, net of reimbursements from our customers. Of these amounts, \$13 million in 2010, \$10 million in 2009 and \$18 million in 2008 relate to research and development, which includes the research, design, and development of a new unproven product or process. Additionally, \$80 million, \$61 million and \$80 million of engineering, research, and development expense for 2010, 2009 and 2008, respectively, relates to engineering costs we incurred for application of existing products and processes to vehicle platforms. The remainder of the expenses in each year relate to improvements and enhancements to existing products and processes. Further, our customers reimburse us for engineering, research, and development costs on some platforms when we prepare prototypes and incur costs before platform awards. Our engineering, research, and development expense for 2010, 2009 and 2008 has been reduced by \$110 million, \$104 million and \$120 million, respectively, for these reimbursements.

*Pre-production Design and Development and Tooling Assets*

We expense pre-production design and development costs as incurred unless we have a contractual guarantee for reimbursement from the original equipment customer. Unbilled pre-production design and development costs recorded in prepayments and other and long-term receivables was \$15 million and \$14 million on December 31, 2010 and 2009, respectively. In addition, plant, property and equipment included \$38 million and \$49 million at December 31, 2010 and 2009, respectively, for original equipment tools and dies that we own, and prepayments and other included \$46 million and \$50 million at December 31, 2010 and 2009, respectively, for in-process tools and dies that we are building for our original equipment customers.

*Income Taxes*

We evaluate our deferred income taxes quarterly to determine if valuation allowances are required or should be adjusted. U.S. GAAP requires that companies assess whether valuation allowances should be established against their

deferred tax assets based on consideration of all available evidence, both positive and negative, using a more likely than not standard. This assessment considers, among other matters, the nature,

**Table of Contents**

frequency and amount of recent losses, the duration of statutory carryforward periods, and tax planning strategies. In making such judgments, significant weight is given to evidence that can be objectively verified.

Valuation allowances have been established for deferred tax assets based on a more likely than not threshold. The ability to realize deferred tax assets depends on our ability to generate sufficient taxable income within the carryforward periods provided for in the tax law for each tax jurisdiction. We have considered the following possible sources of taxable income when assessing the realization of our deferred tax assets:

Future reversals of existing taxable temporary differences;

Taxable income or loss, based on recent results, exclusive of reversing temporary differences and carryforwards; and

Tax-planning strategies.

In 2010, we reported income tax expense of \$69 million. The tax expense recorded differs from the expense that would be recorded using a U.S. Federal statutory rate of 35 percent due to the impact of not benefiting tax losses in the U.S. and certain foreign jurisdictions, and charges primarily related to adjustments to prior year income taxes and tax contingencies which more than offset a favorable mix of tax rates in the jurisdictions we pay taxes. During 2010, we recorded a \$52 million reduction in our valuation allowance related to the utilization of U.S. NOLs resulting from a reorganization of our European operations. In evaluating the requirements to record a valuation allowance, accounting standards do not permit us to consider an economic recovery in the U.S. or new business we have won. Consequently, beginning in 2008, given our historical losses, we concluded that our ability to fully utilize our NOLs was limited due to projecting the continuation of the negative economic environment and the impact of the negative operating environment on our tax planning strategies. As a result of our tax planning strategies which have not yet been implemented and which do not depend upon generating future taxable income, we carry deferred tax assets in the U.S. of \$90 million relating to the expected utilization of those NOLs. The federal NOLs expire beginning in tax years ending in 2020 through 2029. The state NOLs expire in various tax years through 2029.

If our operating performance improves on a sustained basis, our conclusion regarding the need for a valuation allowance could change, resulting in the reversal of some or all of the valuation allowance in the future. The charge to establish the U.S. valuation allowance also includes items related to the losses allocable to certain state jurisdictions where it was determined that tax attributes related to those jurisdictions were potentially not realizable.

We are required to record a valuation allowance against deferred tax assets generated by taxable losses in each period in the U.S. as well as in other foreign jurisdictions. Our future provision for income taxes will include no tax benefit with respect to losses incurred and no tax expense with respect to income generated in these jurisdictions until the respective valuation allowance is eliminated. This will cause variability in our effective tax rate.

*Goodwill, net*

We evaluate goodwill for impairment in the fourth quarter of each year, or more frequently if events indicate it is warranted. The goodwill impairment test consists of a two-step process. In step one, we compare the estimated fair value of our reporting units with goodwill to the carrying value of the unit's assets and liabilities to determine if impairment exists within the recorded balance of goodwill. We estimate the fair value of each reporting unit using the income approach which is based on the present value of estimated future cash flows. The income approach is dependent on a number of factors, including estimates of market trends, forecasted revenues and expenses, capital expenditures, weighted average cost of capital and other variables. A separate discount rate derived by a combination of published sources, internal estimates and weighted based on our debt and equity structure, was used to calculate the

discounted cash flows for each of our reporting units. These estimates are based on assumptions that we believe to be reasonable, but which are inherently uncertain and outside of the control of management. If the carrying value of the reporting unit is higher than its fair value, there is an indication that impairment may exist which requires step two to be performed to

## **Table of Contents**

measure the amount of the impairment loss. The amount of impairment is determined by comparing the implied fair value of a reporting unit's goodwill to its carrying value.

In the fourth quarter of 2009, the estimated fair value of each of our reporting units significantly exceeded the carrying value of its assets and liabilities. In the fourth quarter of 2010, the estimated fair value of all of our reporting units, except for our Australian reporting unit, significantly exceeded the carrying value of its assets and liabilities. Our Australian reporting unit had a goodwill balance of \$11 million with an estimated fair value in excess of its net carrying value of one percent as of the testing date. Although our Australian operations support the value of goodwill reported as tested in the fourth quarter of 2010, it is possible that assumptions and estimates could change in future periods and result in a future impairment of our Australian reporting unit.

### *Pension and Other Postretirement Benefits*

We have various defined benefit pension plans that cover some of our employees. We also have postretirement health care and life insurance plans that cover some of our domestic employees. Our pension and postretirement health care and life insurance expenses and valuations are dependent on assumptions used by our actuaries in calculating those amounts. These assumptions include discount rates, health care cost trend rates, long-term return on plan assets, retirement rates, mortality rates and other factors. Health care cost trend rate assumptions are developed based on historical cost data and an assessment of likely long-term trends. Retirement rates are based primarily on actual plan experience while mortality rates are based upon the general population experience which is not expected to differ materially from our experience.

Our approach to establishing the discount rate assumption for both our domestic and foreign plans is generally based on the yield on high-quality corporate fixed-income investments. At the end of each year, the discount rate is determined using the results of bond yield curve models based on a portfolio of high quality bonds matching the notional cash inflows with the expected benefit payments for each significant benefit plan. Based on this approach, for 2010 we lowered the weighted average discount rate for all our pension plans to 5.5 percent in 2010 from 6.0 percent in 2009. The discount rate for postretirement benefits was lowered to 5.6 percent in 2010 from 6.1 percent in 2009.

Our approach to determining expected return on plan asset assumptions evaluates both historical returns as well as estimates of future returns, and is adjusted for any expected changes in the long-term outlook for the equity and fixed income markets. As a result, our estimate of the weighted average long-term rate of return on plan assets for all of our pension plans was lowered from 7.6 percent in 2009 to 7.2 percent for 2010.

Except in the U.K., our pension plans generally do not require employee contributions. Our policy is to fund our pension plans in accordance with applicable U.S. and foreign government regulations and to make additional payments as funds are available to achieve full funding of the accumulated benefit obligation. At December 31, 2010, all legal funding requirements had been met. In 2010, we recognized a charge of \$6 million related to an actuarial loss for lump-sum pension payments to two former employees. Other postretirement benefit obligations, such as retiree medical, and certain foreign pension plans are funded as the obligations become due.

Refer to Footnote 10 of our notes to consolidated financial statements for more information regarding our pension and other postretirement employee benefit costs and assumptions.

### *Recent Accounting Pronouncements*

Footnote 1 to the consolidated financial statements of Tenneco Inc. located in Item 8 Financial Statements and Supplemental Data are incorporated herein by reference.

**Table of Contents****Derivative Financial Instruments***Foreign Currency Exchange Rate Risk*

We use derivative financial instruments, principally foreign currency forward purchase and sale contracts with terms of less than one year, to hedge our exposure to changes in foreign currency exchange rates. Our primary exposure to changes in foreign currency rates results from intercompany loans made between affiliates to minimize the need for borrowings from third parties. Additionally, we enter into foreign currency forward purchase and sale contracts to mitigate our exposure to changes in exchange rates on certain intercompany and third-party trade receivables and payables. We manage counter-party credit risk by entering into derivative financial instruments with major financial institutions that can be expected to fully perform under the terms of such agreements. We do not enter into derivative financial instruments for speculative purposes.

In managing our foreign currency exposures, we identify and aggregate existing offsetting positions and then hedge residual exposures through third-party derivative contracts. The fair value of our foreign currency forward contracts was \$2 million at December 31, 2010 and is based on an internally developed model which incorporates observable inputs including quoted spot rates, forward exchange rates and discounted future expected cash flows utilizing market interest rates with similar quality and maturity characteristics. The following table summarizes by major currency the notional amounts for our foreign currency forward purchase and sale contracts as of December 31, 2010. All contracts in the following table mature no later than March 31, 2011.

		<b>December 31, 2010 Notional Amount in Foreign Currency (Millions)</b>
Australian dollars	Purchase	1
British pounds	Purchase	10
	Sell	(8)
European euro	Sell	(15)
South African rand	Purchase	217
	Sell	(41)
U.S. dollars	Purchase	2
	Sell	(18)
Other	Purchase	652
	Sell	(1)

*Interest Rate Risk*

Our financial instruments that are sensitive to market risk for changes in interest rates are primarily our debt securities. We use our revolving credit facilities to finance our short-term and long-term capital requirements. We pay a current market rate of interest on these borrowings. Our long-term capital requirements have been financed with long-term debt with original maturity dates ranging from four to ten years. On December 31, 2010, we had \$1,011 million in long-term debt obligations that have fixed interest rates. Of that amount, \$500 million is fixed through December 2020, \$250 million is fixed through November 2015, \$225 million is fixed through August 2018, \$20 million was fixed through November 2014 and the remainder is fixed from 2011 through 2025. On January 7, 2011, we redeemed the remaining outstanding \$20 million of the 85/8 percent senior subordinated notes at a price of 102.875 percent of

principal amount plus accrued and unpaid interest. We also have \$152 million in long-term debt obligations that are subject to variable interest rates. For more detailed explanations on our debt structure and senior credit facility refer to Liquidity and Capital Resources Capitalization earlier in this Management s Discussion and Analysis.

We estimate that the fair value of our long-term debt at December 31, 2010 was about 103 percent of its book value. A one percentage point increase or decrease in interest rates would increase or decrease the annual

**Table of Contents**

interest expense we recognize in the income statement and the cash we pay for interest expense by about \$2 million.

**Environmental and Other Matters**

We are subject to a variety of environmental and pollution control laws and regulations in all jurisdictions in which we operate. We expense or capitalize, as appropriate, expenditures for ongoing compliance with environmental regulations that relate to current operations. We expense costs related to an existing condition caused by past operations that do not contribute to current or future revenue generation. We record liabilities when environmental assessments indicate that required remedial efforts are probable and the costs can be reasonably estimated. Estimates of the liability are based upon currently available facts, existing technology, and presently enacted laws and regulations taking into consideration the likely effects of inflation and other societal and economic factors. We consider all available evidence including prior experience in remediation of contaminated sites, other companies cleanup experiences and data released by the United States Environmental Protection Agency or other organizations. These estimated liabilities are subject to revision in future periods based on actual costs or new information. Where future cash flows are fixed or reliably determinable, we have discounted the liabilities, as discussed in Footnote 12 Commitments and Contingency Litigation, of our notes to consolidated financial statements. All other environmental liabilities are recorded at their undiscounted amounts. We evaluate recoveries separately from the liability and, when they are assured, recoveries are recorded and reported separately from the associated liability in our consolidated financial statements.

As of December 31, 2010, we have the obligation to remediate or contribute towards the remediation of certain sites, including two existing Superfund sites. At December 31, 2010, our aggregated estimated share of environmental remediation costs for all these sites on a discounted basis was approximately \$16 million, of which \$5 million is recorded in other current liabilities and \$11 million is recorded in deferred credits and other liabilities in our consolidated balance sheet. For those locations in which the liability was discounted, the weighted average discount rate used was 3.2 percent. The undiscounted value of the estimated remediation costs was \$21 million. Our expected payments of environmental remediation costs are estimated to be approximately \$5 million in 2011, \$1 million in each year beginning 2012 through 2015 and \$12 million thereafter. Based on information known to us, we have established reserves that we believe are adequate for these costs. Although we believe these estimates of remediation costs are reasonable and are based on the latest available information, the costs are estimates and are subject to revision as more information becomes available about the extent of remediation required. At some sites, we expect that other parties will contribute towards the remediation costs. In addition, certain environmental statutes provide that our liability could be joint and several, meaning that we could be required to pay in excess of our share of remediation costs. Our understanding of the financial strength of other potentially responsible parties at these sites has been considered, where appropriate, in our determination of our estimated liability.

The \$16 million noted above includes \$5 million of estimated environmental remediation costs that resulted from the bankruptcy of Mark IV Industries in 2009. Prior to our 1996 acquisition of The Pullman Company, Pullman had sold certain assets to Mark IV. As partial consideration for the purchase of these assets, Mark IV agreed to assume Pullman's and its subsidiaries' historical obligations to contribute to the environmental remediation of certain sites. In April of 2009, Mark IV filed a petition for insolvency under Chapter 11 of the United States Bankruptcy Code and notified Pullman that it no longer intends to continue to contribute toward the remediation of those sites. We are continuing to conduct a thorough analysis and review of our remediation obligations and it is possible that our estimate may change as additional information becomes available to us.

We do not believe that any potential costs associated with our current status as a potentially responsible party in the Superfund sites, or as a liable party at the other locations referenced herein, will be material to our consolidated results of operations, financial position or cash flows.

We also from time to time are involved in legal proceedings, claims or investigations that are incidental to the conduct of our business. Some of these proceedings allege damages against us relating to environmental liabilities (including toxic tort, property damage and remediation), intellectual property matters (including patent, trademark and copyright infringement, and licensing disputes), personal injury claims (including

## **Table of Contents**

injuries due to product failure, design or warning issues, and other product liability related matters), taxes, employment matters, and commercial or contractual disputes, sometimes related to acquisitions or divestitures. For example, one of our Argentine subsidiaries is currently defending against a criminal complaint alleging the failure to comply with laws requiring the proceeds of export transactions to be collected, reported and/or converted to local currency within specified time periods. As another example, we are subject to an audit in 11 states of our practices with respect to the payment of unclaimed property to those states. We are in the early stages of this audit, which could cover over 30 years and we now have practices in place which we believe ensure that we pay unclaimed property as required. We vigorously defend ourselves against all of these claims. In future periods, we could be subject to cash costs or charges to earnings if any of these matters are resolved on unfavorable terms. However, although the ultimate outcome of any legal matter cannot be predicted with certainty, based on current information, including our assessment of the merits of the particular claim, we do not expect that these legal proceedings or claims will have any material adverse impact on our future consolidated financial position, results of operations or cash flows.

In addition, we are subject to a number of lawsuits initiated by a significant number of claimants alleging health problems as a result of exposure to asbestos. In the early 2000 s we were named in nearly 20,000 complaints, most of which were filed in Mississippi state court and the vast majority of which made no allegations of exposure to asbestos from our product categories. Most of these claims have been dismissed and our current docket of active and inactive cases is less than 500 cases nationwide. A small number of claims have been asserted by railroad workers alleging exposure to asbestos products in railroad cars manufactured by The Pullman Company, one of our subsidiaries. The balance of the claims is related to alleged exposure to asbestos in our automotive emission control products. Only a small percentage of these claimants allege that they were automobile mechanics and a significant number appear to involve workers in other industries or otherwise do not include sufficient information to determine whether there is any basis for a claim against us. We believe, based on scientific and other evidence, it is unlikely that mechanics were exposed to asbestos by our former muffler products and that, in any event, they would not be at increased risk of asbestos-related disease based on their work with these products. Further, many of these cases involve numerous defendants, with the number of each in some cases exceeding 100 defendants from a variety of industries. Additionally, the plaintiffs either do not specify any, or specify the jurisdictional minimum, dollar amount for damages. As major asbestos manufacturers continue to go out of business or file for bankruptcy, we may experience an increased number of these claims. We vigorously defend ourselves against these claims as part of our ordinary course of business. In future periods, we could be subject to charges to earnings if any of these matters are resolved unfavorably to us. To date, with respect to claims that have proceeded sufficiently through the judicial process, we have regularly achieved favorable resolutions. Accordingly, we presently believe that these asbestos-related claims will not have a material adverse impact on our future consolidated financial condition, results of operations or cash flows.

## **Employee Stock Ownership Plans**

We have established Employee Stock Ownership Plans for the benefit of U.S. employees. Under the plans, subject to limitations in the Internal Revenue Code, participants may elect to defer up to 75 percent of their salary through contributions to the plan, which are invested in selected mutual funds or used to buy our common stock. We match in cash 50 percent of each employee s contribution up to eight percent of the employee s salary. In 2009, we temporarily discontinued these matching contributions as a result of the global economic downturn which began in 2008. We restored the matching contributions to salaried and non-union hourly U.S. employees beginning on January 1, 2010. In connection with freezing the defined benefit pension plans for nearly all U.S. based salaried and non-union hourly employees effective December 31, 2006, and the related replacement of those defined benefit plans with defined contribution plans, we are making additional contributions to the Employee Stock Ownership Plans. We recorded expense for these contributions of \$17 million, \$10 million, and \$18 million in 2010, 2009 and 2008, respectively. Matching contributions vest immediately. Defined benefit replacement contributions fully vest on the employee s third anniversary of employment.

**MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING**

Management of Tenneco Inc. is responsible for establishing and maintaining adequate internal control over financial reporting (as defined in Rule 13a-15(f) and 15d-15(f) under the Securities Exchange Act of 1934). Management's internal control system is designed to provide reasonable assurance regarding the preparation and fair presentation of published financial statements. All internal control systems, no matter how well designed, have inherent limitations, including the possibility of human error or circumvention or overriding of controls. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation and may not prevent or detect misstatements in financial reporting. Further, due to changing conditions and adherence to established policies and controls, internal control effectiveness may vary over time.

Management assessed the company's effectiveness of internal controls over financial reporting. In making this assessment, it used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission ( COSO ) in *Internal Control-Integrated Framework*.

Based on our assessment we have concluded that the company's internal control over financial reporting was effective as of December 31, 2010.

Our internal control over financial reporting as of December 31, 2010 has been audited by PricewaterhouseCoopers LLP, our independent registered public accounting firm, as stated in their report, which is included herein.

**REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM**

To the Board of Directors and Shareholders of Tenneco Inc.:

In our opinion, the accompanying consolidated balance sheets and the related consolidated statements of income (loss), cash flows, changes in shareholders' equity and comprehensive income (loss) present fairly, in all material respects, the financial position of Tenneco Inc. and its subsidiaries at December 31, 2010 and the results of their operations and their cash flows for the year ended December 31, 2010 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedule for the year ended December 31, 2010 in Item 8 presents fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2010, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these financial statements, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management Report on Internal Control over Financial Reporting. Our responsibility is to express opinions on these financial statements and on the Company's internal control over financial reporting based on our integrated audit. We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audit of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

**REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM**

To the Board of Directors and Shareholders of Tenneco Inc.:

We have audited the accompanying consolidated balance sheet of Tenneco Inc. and subsidiaries (the Company) as of December 31, 2009, and the related consolidated statements of income (loss), cash flows, changes in shareholders equity, and comprehensive income (loss) for each of the two years in the period ended December 31, 2009. Our audits also included the financial statement schedule listed in the Index at Item 8 for each of the two years in the period ended December 31, 2009. These financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of the Company and subsidiaries as of December 31, 2009, and the results of its operations and its cash flows for each of the two years in the period ended December 31, 2009, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, present fairly, in all material respects, the information set forth therein.

**Table of Contents****TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS****1. Summary of Accounting Policies***Consolidation and Presentation*

Our consolidated financial statements include all majority-owned subsidiaries. We carry investments in 20 percent to 50 percent owned companies in which the Company does not have a controlling interest, as equity method investments, at cost plus equity in undistributed earnings since the date of acquisition and cumulative translation adjustments. We have eliminated intercompany transactions. We have evaluated all subsequent events through the date our financial statements were issued.

*Use of Estimates*

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires us to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. These estimates include, among others allowances for doubtful receivables, promotional and product returns, pension and post-retirement benefit plans, income taxes, and contingencies. These items are covered in more detail elsewhere in Note 1, Note 7, Note 10, and Note 12 of the consolidated financial statements of Tenneco Inc. Actual results could differ from those estimates.

*Redeemable Noncontrolling Interests*

On January 1, 2009, we adopted new accounting guidance on the presentation and disclosure of noncontrolling interests in our consolidated financial statements, which required us to reclassify retrospectively for all periods presented, noncontrolling ownership interests (formerly called minority interests) from the mezzanine section of the balance sheet between liabilities and equity to the equity section of the balance sheet, and to change our presentation of net income (loss) in the consolidated statements of cash flows to include the portion of net income (loss) attributable to noncontrolling ownership interests. We have noncontrolling interests in four joint ventures with redemption features that could require us to purchase the noncontrolling interests at fair value in the event of a change in control of Tenneco Inc. or certain of our subsidiaries. Additionally, we hold a noncontrolling interest in a joint venture which requires us to purchase the noncontrolling interest at fair value in the event of default or under certain other circumstances. We do not believe that it is probable that the redemption features in any of these joint venture agreements will be triggered. However, the redemption of these shares is not solely within our control. Accordingly, the related noncontrolling interests are presented as Redeemable noncontrolling interests in the mezzanine section of our consolidated balance sheets. We have also expanded our financial statement presentation and disclosure of noncontrolling ownership interests on our consolidated statements of income (loss), consolidated statements of comprehensive income (loss) and consolidated statements of changes in shareholders' equity in accordance with these new disclosure requirements.

The following is a rollforward of activity in our redeemable noncontrolling interests for the years ending December 31, 2010, 2009 and 2008, respectively:

2010	2009	2008
(Millions)		

Edgar Filing: TENNECO INC - Form 10-K

Balance January 1	\$ 7	\$ 7	\$ 6
Net income attributable to redeemable noncontrolling interests	8	5	4
Other comprehensive income (loss)	2		
Dividends declared	(5)	(5)	(3)
Balance December 31	\$ 12	\$ 7	\$ 7

**Table of Contents****TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)***Inventories*

At December 31, 2010 and 2009, inventory by major classification was as follows:

	<b>2010</b>	<b>2009</b>
	<b>(Millions)</b>	
Finished goods	\$ 222	\$ 175
Work in process	164	116
Raw materials	118	95
Materials and supplies	43	42
	<b>\$ 547</b>	<b>\$ 428</b>

Our inventories are stated at the lower of cost or market value using the first-in, first-out ( FIFO ) or average cost methods.

*Goodwill and Intangibles, net*

We evaluate goodwill for impairment in the fourth quarter of each year, or more frequently if events indicate it is warranted. The goodwill impairment test consists of a two-step process. In step one, we compare the estimated fair value of our reporting units with goodwill to the carrying value of the unit's assets and liabilities to determine if impairment exists within the recorded balance of goodwill. We estimate the fair value of each reporting unit using the income approach which is based on the present value of estimated future cash flows. The income approach is dependent on a number of factors, including estimates of market trends, forecasted revenues and expenses, capital expenditures, weighted average cost of capital and other variables. A separate discount rate derived by a combination of published sources, internal estimates and weighted based on our debt and equity structure, was used to calculate the discounted cash flows for each of our reporting units. These estimates are based on assumptions that we believe to be reasonable, but which are inherently uncertain and outside of the control of management. If the carrying value of the reporting unit is higher than its fair value, there is an indication that impairment may exist which requires step two to be performed to measure the amount of the impairment loss. The amount of impairment is determined by comparing the implied fair value of a reporting unit's goodwill to its carrying value.

In the fourth quarter of 2009, the estimated fair value of each of our reporting units significantly exceeded the carrying value of its assets and liabilities. In the fourth quarter of 2010, the estimated fair value of all of our reporting units, except for our Australian reporting unit, significantly exceeded the carrying value of its assets and liabilities. Our Australian reporting unit had a goodwill balance of \$11 million with an estimated fair value in excess of its net carrying value of one percent as of the testing date. Although our Australian operations support the value of goodwill reported as tested in the fourth quarter of 2010, it is possible that assumptions and estimates could change in future periods and result in a future impairment of our Australian reporting unit.

**Table of Contents****TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

The changes in the net carrying amount of goodwill for the years ended December 31, 2010 and 2009 were as follows:

	<b>Year Ended December 31, 2010</b>			
	<b>North America</b>	<b>Europe, South America and India</b>	<b>Asia Pacific</b>	<b>Total</b>
Balance as January 1				
Goodwill	\$ 330	\$ 87	\$ 10	\$ 427

	\$ 24	\$ 55	\$ 10	\$ 89

We have capitalized certain intangible assets, primarily technology rights, trademarks and patents, based on their estimated fair value at the date we acquired them. We amortize our finite useful life intangible assets on a straight-line basis over periods ranging from 5 to 50 years. Amortization of intangibles amounted to \$2 million in each of 2010 and 2009 and \$3 million in 2008, and is included in the statements of income

**Table of Contents****TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

caption Depreciation and amortization of intangibles. The carrying amount and accumulated amortization of our finite useful life intangible assets were as follows:

	December 31, 2010		December 31, 2009	
	Gross Carrying Value (Millions)	Accumulated Amortization	Gross Carrying Value (Millions)	Accumulated Amortization
Customer contract	\$ 8	\$ (2)	\$ 8	\$ (2)
Patents	5	(4)	4	(3)
Technology rights	21	(5)	22	(5)
Other	6	(1)	2	
Total	\$ 40	\$ (12)	\$ 36	\$ (10)

Estimated amortization of intangible assets over the next five years is expected to be \$2 million in 2011 and 2012, \$4 million in 2013 and 2014 and \$3 million in 2015. We have capitalized indefinite life intangibles of \$4 million relating to purchased trademarks from our Marzocchi acquisition in 2007.

*Plant, Property, and Equipment, at Cost*

At December 31, 2010 and 2009, plant, property, and equipment, at cost, by major category were as follows:

	2010 (Millions)	2009
Land, buildings, and improvements	\$ 524	\$ 516
Machinery and equipment	2,406	2,431
Other, including construction in progress	179	152
	\$ 3,109	\$ 3,099

We depreciate these properties excluding land on a straight-line basis over the estimated useful lives of the assets. Useful lives range from 10 to 50 years for buildings and improvements and from three to 25 years for machinery and equipment.

*Notes and Accounts Receivable and Allowance for Doubtful Accounts*

Receivables consist of amounts billed and currently due from customers and unbilled pre-production design and development costs. Short and long-term accounts receivable outstanding were \$823 million and \$602 million at

December 31, 2010 and 2009, respectively. The allowance for doubtful accounts on short-term and long-term accounts receivable was \$20 million and \$22 million at December 31, 2010 and 2009, respectively. Short and long-term notes receivable outstanding were \$2 million and \$3 million at December 31, 2010 and 2009, respectively. The allowance for doubtful accounts on short-term and long-term notes receivable was zero and \$3 million at December 31, 2010 and 2009, respectively.

*Pre-production Design and Development and Tooling Assets*

We expense pre-production design and development costs as incurred unless we have a contractual guarantee for reimbursement from the original equipment customer. Unbilled pre-production design and development costs recorded in prepayments and other and long-term receivables was \$15 million and \$14 million on December 31, 2010 and 2009, respectively. In addition, plant, property and equipment included \$38 million and \$49 million at December 31, 2010 and 2009, respectively, for original equipment tools and

**Table of Contents**

**TENNECO INC.**

**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

dies that we own, and prepayments and other included \$46 million and \$50 million at December 31, 2010 and 2009, respectively, for in-process tools and dies that we are building for our original equipment customers.

*Internal Use Software Assets*

We capitalize certain costs related to the purchase and development of software that we use in our business operations. We amortize the costs attributable to these software systems over their estimated useful lives, ranging from 3 to 12 years, based on various factors such as the effects of obsolescence, technology, and other economic factors. Capitalized software development costs, net of amortization, were \$53 million and \$60 million at December 31, 2010 and 2009, respectively, and are recorded in other long-term assets. Amortization of software development costs was approximately \$18 million, \$22 million and \$24 million for the years ended December 31, 2010, 2009 and 2008, respectively, and is included in the statements of income (loss) captioned Depreciation and amortization of intangibles. Additions to capitalized software development costs, including payroll and payroll-related costs for those employees directly associated with developing and obtaining the internal use software, are classified as investing activities in the statements of cash flows.

*Income Taxes*

We evaluate our deferred income taxes quarterly to determine if valuation allowances are required or should be adjusted. U.S. GAAP requires that companies assess whether valuation allowances should be established against their deferred tax assets based on consideration of all available evidence, both positive and negative, using a more likely than not standard. This assessment considers, among other matters, the nature, frequency and amount of recent losses, the duration of statutory carryforward periods, and tax planning strategies. In making such judgments, significant weight is given to evidence that can be objectively verified.

Valuation allowances have been established for deferred tax assets based on a more likely than not threshold. The ability to realize deferred tax assets depends on our ability to generate sufficient taxable income within the carryforward periods provided for in the tax law for each tax jurisdiction. We have considered the following possible sources of taxable income when assessing the realization of our deferred tax assets:

Future reversals of existing taxable temporary differences;

Taxable income or loss, based on recent results, exclusive of reversing temporary differences and carryforwards; and

Tax-planning strategies.

In 2010, we reported income tax expense of \$69 million. The tax expense recorded differs from the expense that would be recorded using a U.S. Federal statutory rate of 35 percent due to the impact of not benefiting tax losses in the U.S. and certain foreign jurisdictions, and charges primarily related to adjustments to prior year income taxes and tax contingencies which more than offset a favorable mix of tax rates in the jurisdictions we pay taxes. During 2010, we recorded a \$52 million reduction in our valuation allowance related to the utilization of U.S. NOLs resulting from a reorganization of our European operations. In evaluating the requirements to record a valuation allowance, accounting standards do not permit us to consider an economic recovery in the U.S. or new business we have won. Consequently, beginning in 2008, given our historical losses, we concluded that our ability to fully utilize our NOLs

was limited due to projecting the continuation of the negative economic environment and the impact of the negative operating environment on our tax planning strategies. As a result of our tax planning strategies which have not yet been implemented and which do not depend upon generating future taxable income, we carry deferred tax assets in the U.S. of \$90 million relating to the expected utilization of those NOLs. The federal NOLs expire beginning in tax years ending in 2020 through 2029. The state NOLs expire in various tax years through 2029.

**Table of Contents**

**TENNECO INC.**

**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

If our operating performance improves on a sustained basis, our conclusion regarding the need for a valuation allowance could change, resulting in the reversal of some or all of the valuation allowance in the future. The charge to establish the U.S. valuation allowance also includes items related to the losses allocable to certain state jurisdictions where it was determined that tax attributes related to those jurisdictions were potentially not realizable.

We are required to record a valuation allowance against deferred tax assets generated by taxable losses in each period in the U.S. as well as in other foreign jurisdictions. Our future provision for income taxes will include no tax benefit with respect to losses incurred and no tax expense with respect to income generated in these jurisdictions until the respective valuation allowance is eliminated. This will cause variability in our effective tax rate.

*Revenue Recognition*

We recognize revenue for sales to our original equipment and aftermarket customers when title and risk of loss passes to the customers under the terms of our arrangements with those customers, which is usually at the time of shipment from our plants or distribution centers. Generally, in connection with the sale of exhaust systems to certain original equipment manufacturers, we purchase catalytic converters and diesel particulate filters or components thereof including precious metals ( substrates ) on behalf of our customers which are used in the assembled system. These substrates are included in our inventory and passed through to the customer at our cost, plus a small margin, since we take title to the inventory and are responsible for both the delivery and quality of the finished product. Revenues recognized for substrate sales were \$1,297 million, \$966 million and \$1,492 million in 2010, 2009 and 2008, respectively. For our aftermarket customers, we provide for promotional incentives and returns at the time of sale. Estimates are based upon the terms of the incentives and historical experience with returns. Certain taxes assessed by governmental authorities on revenue producing transactions, such as value added taxes, are excluded from revenue and recorded on a net basis. Shipping and handling costs billed to customers are included in revenues and the related costs are included in cost of sales in our Statements of Income (Loss).

*Warranty Reserves*

Where we have offered product warranty, we also provide for warranty costs. Provisions for estimated expenses related to product warranty are made at the time products are sold or when specific warranty issues are identified on OE products. These estimates are established using historical information about the nature, frequency, and average cost of warranty claims and upon specific warranty issues as they arise. The warranty terms vary but range from one year up to limited lifetime warranties on some of our premium aftermarket products. We actively study trends of our warranty claims and take action to improve product quality and minimize warranty claims. While we have not experienced any material differences between these estimates and our actual costs, it is reasonably possible that future warranty issues could arise that could have a significant impact on our consolidated financial statements.

*Earnings Per Share*

We compute basic earnings per share by dividing income available to common shareholders by the weighted-average number of common shares outstanding. The computation of diluted earnings per share is similar to the computation of basic earnings per share, except that we adjust the weighted-average number of shares outstanding to include estimates of additional shares that would be issued if potentially dilutive common shares had been issued. In addition, we adjust income available to common shareholders to include any changes in income or loss that would result from the assumed issuance of the dilutive common shares. Due to the net losses for the years ended December 31, 2009 and

2008, respectively, the calculation of diluted

**Table of Contents**

**TENNECO INC.**

**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

earnings per share does not include the dilutive effect from shares of restricted stock and stock options. See Note 2 to the consolidated financial statements of Tenneco Inc.

*Engineering, Research and Development*

We expense engineering, research, and development costs as they are incurred. Engineering, research, and development expenses were \$117 million for 2010, \$97 million for 2009 and \$127 million for 2008, net of reimbursements from our customers. Our customers reimburse us for engineering, research, and development costs on some platforms when we prepare prototypes and incur costs before platform awards. Our engineering, research, and development expense for 2010, 2009, and 2008 has been reduced by \$110 million, \$104 million and \$120 million, respectively, for these reimbursements.

*Advertising and Promotion Expenses*

We expense advertising and promotion expenses as they are incurred. Advertising and promotion expenses were \$59 million, \$50 million, and \$49 million for the years ended December 31, 2010, 2009, and 2008, respectively.

*Foreign Currency Translation*

We translate the consolidated financial statements of foreign subsidiaries into U.S. dollars using the exchange rate at each balance sheet date for assets and liabilities and a weighted-average exchange rate for revenues and expenses in each period. We record translation adjustments for those subsidiaries whose local currency is their functional currency as a component of accumulated other comprehensive loss in shareholders' equity. We recognize transaction gains and losses arising from fluctuations in currency exchange rates on transactions denominated in currencies other than the functional currency in earnings as incurred, except for those transactions which hedge purchase commitments and for those intercompany balances which are designated as long-term investments. Our results include foreign currency transaction losses of less than \$1 million in 2010, \$4 million in 2009, and \$11 million in 2008, respectively.

*Risk Management Activities*

We use derivative financial instruments, principally foreign currency forward purchase and sales contracts with terms of less than one year, to hedge our exposure to changes in foreign currency exchange rates. Our primary exposure to changes in foreign currency rates results from intercompany loans made between affiliates to minimize the need for borrowings from third parties. Additionally, we enter into foreign currency forward purchase and sale contracts to mitigate our exposure to changes in exchange rates on certain intercompany and third-party trade receivables and payables. We manage counter-party credit risk by entering into derivative financial instruments with major financial institutions that can be expected to fully perform under the terms of such agreements. We do not enter into derivative financial instruments for speculative purposes. The fair value of our foreign currency forward contracts is based on an internally developed model which incorporates observable inputs including quoted spot rates, forward exchange rates and discounted future expected cash flows utilizing market interest rates with similar quality and maturity characteristics. We record the change in fair value of these foreign exchange forward contracts as part of currency gains (losses) within cost of sales in the consolidated statements of income (loss). The fair value of foreign exchange forward contracts are recorded in prepayments and other current assets or other current liabilities in the consolidated balance sheet.

*Recent Accounting Pronouncements*

In July 2010, the Financial Accounting Standard Board (FASB) issued new accounting guidance on the disclosure of a company's credit quality of financing receivables and the allowance for credit losses. Additional disclosure is required for financing receivables on a disaggregated basis including a rollforward

**Table of Contents****TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

schedule of the allowance for credit losses on a portfolio segment basis, the recorded investment in financing receivables for each portfolio segment, the nonaccrual status of financing receivables by class of financing receivables and the amount of impaired financing receivables by class of financing receivables. In addition, disclosures are required relating to the credit quality indicators, past due information and modifications made to an entity's financing receivables. These new disclosure requirements are effective for interim and annual reporting periods ending on or after December 15, 2010. We have incorporated these new disclosure requirements in Footnote 1 of our notes to consolidated financial statements.

In June 2009, the FASB issued new accounting guidance which changes the accounting for transfers of financial assets, by eliminating the concept of a qualifying special purpose entity (QSPE), clarifying and amending the derecognition criteria for a transfer to be accounted for as a sale, amending and clarifying the unit of account eligible for sale accounting and requiring that a transferor initially measure at fair value and recognize all assets obtained and liabilities incurred as a result of a transfer of a financial asset or group of financial assets accounted for as a sale. Additionally, all existing QSPEs must be evaluated for consolidation by reporting entities in accordance with the applicable consolidation guidance. The new accounting guidance requires additional disclosures about a transferor's continuing involvement with transfers of financial assets accounted for as a sale, the risks inherent in the transferred financial assets that have been retained, and the nature and financial effect of restrictions on the transferor's assets that continue to be reported in the statement of financial position. The new accounting guidance was effective for a reporting entity's first annual reporting period that begins after November 15, 2009, and for interim and annual reporting periods thereafter. We have adopted this new accounting guidance on January 1, 2010. Prior to the adoption of this new accounting guidance, our securitized accounts receivable programs qualified for sales accounting treatment. The discount fees charged by the factor banks were recorded as a loss on sale of receivables in our consolidated statements of income (loss). Based on the new accounting rules, effective January 1, 2010, we account for our North American securitization programs as a secured borrowing as we no longer meet the conditions required for sales accounting treatment. Our European securitization programs continue to qualify for sales accounting treatment under these new accounting rules. We have disclosed the impact of this accounting rule change on our consolidated financial statements and added additional disclosures as required under this new accounting guidance in Footnote 5 of our notes to consolidated financial statements.

In June 2009, the FASB issued new accounting guidance which changes the criterion relating to the consolidation of variable interest entities (VIE) and amends the guidance governing the determination of whether an enterprise is the primary beneficiary of a VIE by requiring a qualitative rather than quantitative analysis. The new accounting guidance also requires continuous reassessments of whether an enterprise is the primary beneficiary of a VIE and enhanced disclosures about an entity's involvement with a VIE. The new accounting guidance is effective for a reporting entity's first annual reporting period that begins after November 15, 2009, and for interim and annual reporting periods thereafter. The adoption of this new accounting guidance on January 1, 2010, did not have any impact on our consolidated financial statements.

**Table of Contents****TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****2. Earnings (Loss) Per Share**

Earnings (loss) per share of common stock outstanding were computed as follows:

	<b>Year Ended December 31,</b>		
	<b>2010</b>	<b>2009</b>	<b>2008</b>
	<b>(Millions Except Share and Per Share Amounts)</b>		
Basic earnings (loss) per share			
Net earnings (loss) attributable to Tenneco Inc.	\$ 39	\$ (73)	\$ (415)
Weighted average shares of common stock outstanding	59,208,103	48,572,463	46,406,095
Earnings (loss) per average share of common stock	\$ 0.65	\$ (1.50)	\$ (8.95)
Diluted earnings (loss) per share			
Net earnings (loss) attributable to Tenneco Inc.	\$ 39	\$ (73)	\$ (415)
Weighted average shares of common stock outstanding	59,208,103	48,572,463	46,406,095
Effect of dilutive securities:			
Restricted stock	441,561		
Stock options	1,349,030		
Weighted average shares of common stock outstanding including dilutive securities	60,998,694	48,572,463	46,406,095
Earnings (loss) per average share of common stock	\$ 0.63	\$ (1.50)	\$ (8.95)

Options to purchase 612,832 shares of common stock were outstanding as of December 31, 2010, but not included in the computation of diluted earnings per share, because the options were anti-dilutive. As a result of the net loss in 2009 and 2008, the calculation of diluted loss per share excludes the dilutive effect of options and restricted stock.

**3. Acquisitions**

In January 2010, we purchased an additional 20 percent equity interest in our Tenneco Tongtai (Dalian) Exhaust System Co., Ltd. joint venture investment in China for \$15 million in cash. As a result of this purchase, our equity ownership percentage of this joint venture investment increased to 80 percent from 60 percent.

**4. Restructuring and Other Charges**

Over the past several years, we have adopted plans to restructure portions of our operations. These plans were approved by our Board of Directors and were designed to reduce operational and administrative overhead costs throughout the business. Our Board of Directors approved a restructuring project in 2001, known as Project Genesis, which was designed to lower our fixed costs, relocate capacity, reduce our work force, improve efficiency and utilization, and better optimize our global footprint. We have subsequently engaged in various other restructuring

projects related to Project Genesis. We incurred \$40 million in restructuring and related costs during 2008, of which \$17 million was recorded in cost of sales and \$23 million was recorded in selling, general, administrative and engineering expense. In 2009, we incurred \$21 million in restructuring and related costs, of which \$16 million was recorded in cost of sales, \$1 million was recorded in selling, general, administrative and engineering expense and \$4 million was recorded in depreciation and amortization expense. In 2010, we incurred \$19 million in restructuring and related costs, of which \$14 million was recorded in cost of sales and \$5 million was recorded in depreciation and amortization expense.

**Table of Contents****TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

Amounts related to activities that are part of our restructuring plans are as follows:

	<b>December 31,</b>		<b>Impact</b>		<b>December 31,</b>
	<b>2009</b>	<b>2010</b>	<b>of</b>	<b>Reserve</b>	<b>2010</b>
	<b>Restructuring</b>	<b>Cash</b>	<b>Exchange</b>	<b>Adjustments</b>	<b>Restructuring</b>
	<b>Reserve</b>	<b>Payments</b>	<b>Rates</b>		<b>Reserve</b>
			<b>(Millions)</b>		
Severance	\$ 15	(7)		(1)	\$ 7

Under the terms of our amended and extended senior credit agreement that took effect on June 3, 2010, we are allowed to exclude \$60 million of cash charges and expenses, before taxes, related to cost reduction initiatives incurred after June 3, 2010 from the calculation of the financial covenant ratios required under our senior credit facility. As of December 31, 2010, we have excluded \$9 million in cumulative allowable charges relating to restructuring initiatives against the \$60 million available under the terms of the senior credit facility.

On September 22, 2009, we announced that we will be closing our original equipment ride control plant in Cozad, Nebraska. We estimate this closing will generate \$8 million in annualized cost savings once completed, incremental to the \$58 million of savings related to our October 2008 restructuring announcement. We originally planned to have completed the closing of this facility by the end of 2010, however, as a result of the faster than expected increase in light vehicle production in North America and to better optimize the transfer of some of the manufacturing activities, we plan to continue certain production lines through the first half of 2011. We plan to hire at other facilities as we move the production from Cozad to those facilities, resulting in a net decrease of approximately 60 positions. During 2009 we recorded \$11 million of restructuring and related expenses related to this initiative. For the twelve months ended December 31, 2010 we recorded \$10 million of restructuring and related expenses related to this initiative.

At December 31, 2010, our restructuring reserve in Europe was \$1 million which relates to a number of restructuring activities at certain European facilities.

Table of Contents**TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)****5. Long-Term Debt, Short-Term Debt, and Financing Arrangements***Long-Term Debt*

A summary of our long-term debt obligations at December 31, 2010 and 2009, is set forth in the following table:

	<b>2010</b>	<b>2009</b>
	<b>(Millions)</b>	
Tenneco Inc.		
Revolver borrowings due 2014, average effective interest rate 5.4% in 2010 and 5.6% in 2009	\$	\$
Senior Term Loans due 2012 and 2016, average effective interest rate 5.1% in 2010 and 5.7% in 2009	149	133
73/4% Senior Notes due 2018	225	
101/4% Senior Secured Notes due 2013, including unamortized premium		249
67/8% Senior Notes due 2020	500	
85/8% Senior Subordinated Notes due 2014(a)	20	500
81/8% Senior Notes due 2015	250	250
Debentures due 2012 through 2025, average effective interest rate 8.4% in 2010 and 2009	1	1
Customer Notes due 2013, average effective interest rate 8.0% in 2010 and 2009	4	6
Other subsidiaries		
Notes due 2011 through 2025, average effective interest rate 3.0% in 2010 and 4.0% in 2009	13	12
	1,162	1,151
Less maturities classified as current	2	6
Total long-term debt	\$ 1,160	\$ 1,145

- (a) On January 7, 2010, we redeemed the remaining \$20 million 85/8 percent senior subordinated notes by increasing our revolver borrowings which are classified as long-term debt. Accordingly, we have classified the \$20 million as long-term debt.

The aggregate maturities and sinking fund requirements applicable to the long-term debt outstanding at December 31, 2010, are \$24 million, \$5 million, \$4 million, \$2 million and \$252 million for 2011, 2012, 2013, 2014 and 2015, respectively. We have included in the 2011 payments, the redemption of all of the outstanding 85/8 percent senior subordinated notes that were not previously tendered.

**Table of Contents****TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)***Short-Term Debt*

Our short-term debt includes the current portion of long-term obligations and borrowings by foreign subsidiaries. Information regarding our short-term debt as of and for the years ended December 31, 2010 and 2009 is as follows:

	<b>2010</b>	<b>2009</b>
	<b>(Millions)</b>	
Maturities classified as current	\$ 2	\$ 6
Notes payable	61	69
Total short-term debt	\$ 63	\$ 75

	<b>2010</b>	<b>2009</b>
	<b>Notes Payable(a)</b>	<b>Notes Payable(a)</b>
	<b>(Dollars in Millions)</b>	
Outstanding borrowings at end of year	\$ 61	\$ 69
Weighted average interest rate on outstanding borrowings at end of year(b)	7.8%	6.9%
Approximate maximum month-end outstanding borrowings during year	\$ 201	\$ 71
Approximate average month-end outstanding borrowings during year	\$ 109	\$ 60
Weighted average interest rate on approximate average month-end outstanding borrowings during year(b)	5.5%	7.8%

(a) Includes borrowings under both committed credit facilities and uncommitted lines of credit and similar arrangements.

(b) This calculation does not include the commitment fees to be paid on the unused revolving credit facility balances which are recorded as interest expense for accounting purposes.

*Financing Arrangements***Committed Credit Facilities(a) as of December 31, 2010**

	<b>Term</b>	<b>Commitments</b>	<b>Borrowings</b>	<b>Letters of Credit(b)</b>	<b>Available</b>
		<b>(Millions)</b>			
Tenneco Inc. revolving credit agreement	2014	622			622

Tenneco Inc. tranche B-1 letter of credit/revolving loan agreement	2014	130		53	77
Tenneco Inc. Senior Term Loans	2016	149	149		
Subsidiaries credit agreements	2011-2030	84	72		12
		\$ 985	\$ 221	\$ 53	\$ 711

- (a) We generally are required to pay commitment fees on the unused portion of the total commitment.
- (b) Letters of credit reduce the available borrowings under the tranche B-1 letter of credit/revolving loan agreement.

*Overview.* Our financing arrangements are primarily provided by a committed senior secured financing arrangement with a syndicate of banks and other financial institutions. The arrangement is secured by

**Table of Contents**

**TENNECO INC.**

**NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

substantially all our domestic assets and pledges of up to 66 percent of the stock of certain first-tier foreign subsidiaries, as well as guarantees by our material domestic subsidiaries.

On June 3, 2010 we completed an amendment and extension of our senior secured credit facility by extending the term of our revolving credit facility and replacing our \$128 million term loan A with a larger and longer maturity term loan B facility. As a result of the amendment and extension, as of December 31, 2010, the senior credit facility provides us with a total revolving credit facility size of \$622 million until March 16, 2012, when commitments of \$66 million will expire. After March 16, 2012, the extended revolving credit facility will provide \$556 million of revolving credit and will mature on May 31, 2014. The extended facility will mature earlier on December 15, 2013, if our \$130 million tranche B-1 letter of credit/revolving loan facility is not refinanced by that date. Prior to maturity, funds may be borrowed, repaid and re-borrowed under the two revolving credit facilities without premium or penalty. The leverage ratio (consolidated indebtedness net of cash divided by consolidated EBITDA as defined in the senior credit facility agreement) was decreased from 5.00 to 4.50 for the second quarter of 2010; from 4.75 to 4.25 for the third quarter of 2010; and from 4.50 to 4.25 for the fourth quarter of 2010 as a result of the June 3, 2010 amendment.

As of December 31, 2010, the senior credit facility also provides a six-year, \$150 million term loan B maturing in June 2016, and a seven-year \$130 million tranche B-1 letter of credit/revolving loan facility maturing in March 2014. We are required to make quarterly principal payments of \$375 thousand on the term loan B, beginning on September 20, 2010 through March 31, 2016 with a final payment of \$141 million due June 3, 2016. The tranche B-1 letter of credit/revolving loan facility requires repayment by March 2014. We can enter into revolving loans and issue letters of credit under the \$130 million tranche B-1 letter of credit/revolving loan facility. The tranche B-1 letter of credit/revolving loan facility is reflected as debt on our balance sheet only if we borrow money under this facility or if we use the facility to make payments for letters of credit. There is no additional cost to us for issuing letters of credit under the tranche B-1 letter of credit/revolving loan facility. However, outstanding letters of credit reduce our availability to enter into revolving loans under the facility. We pay the tranche B-1 lenders interest equal to LIBOR plus a margin on all borrowings under the facility. Funds deposited with the administrative agent by the lenders and not borrowed by the Company earn interest at an annual rate approximately equal to LIBOR less 25 basis points.

Beginning June 3, 2010 our term loan B and revolving credit facility, bear interest at an annual rate equal to, at our option, either (i) the London Interbank Offered Rate plus a margin of 475 and 450 basis points, respectively, or (ii) a rate consisting of the greater of (a) the JPMorgan Chase prime rate plus a margin of 375 and 350 basis points, respectively, (b) the Federal Funds rate plus 50 basis points plus a margin of 375 and 350 basis points, respectively, and (c) the Eurodollar Rate plus 100 basis points plus a margin of 375 and 350 basis points, respectively. The margin we pay on these borrowings will be reduced by 25 basis points following each fiscal quarter for which our consolidated net leverage ratio is less than 2.25 for extending lenders and for the term loan B and will be further reduced by an additional 25 basis points following each fiscal quarter for which the consolidated net leverage ratio is less than 2.0 for extending lenders. The margin we pay on these borrowings for extending lenders will increase by 50 basis points following each fiscal quarter for which our consolidated net leverage ratio is greater than or equal to 4.0 and will be further increased by an additional 50 basis points following each fiscal quarter for which the consolidated net leverage ratio is greater than or equal to 5.0. Our consolidated net leverage ratio was 2.24 as of December 31, 2010. Accordingly, in March of 2011 the margin we pay on these borrowings will be reduced by 25 basis points for extending lenders and will remain at such level for so long as our consolidated net leverage ratio remains below 2.25 and greater than or equal to 2.0.

The margin we pay on borrowings under our tranche B-1 facility incurred interest at an annual rate equal to, at our option, either (i) the London Interbank Offered Rate plus a margin of 500 basis points, or (ii) a rate consisting of the greater of (a) the JPMorgan Chase prime rate plus a margin of 400 basis points, (b) the Federal Funds rate plus 50 basis points plus a margin of 400 basis points, and (c) the Eurodollar Rate plus

**Table of Contents****TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

100 basis points plus a margin of 400 basis points. The rate will increase by 50 basis points following each fiscal quarter for which our consolidated net leverage ratio is greater than or equal to 5.0.

At December 31, 2010, we had unused borrowing capacity of \$699 million under the \$752 million amount available under the two revolving credit facilities within our senior secured credit facility with no outstanding borrowings and \$53 million in letters of credit outstanding. As of December 31, 2010 our outstanding debt also includes \$20 million of 85/8 percent subordinated notes due January 7, 2011, \$250 million of 81/8 percent senior notes due November 15, 2015, \$149 million term loan B due June 3, 2016, \$225 million of 73/4 percent senior notes due August 15, 2018, \$500 million of 67/8 percent senior notes due December 15, 2020, and \$78 million of other debt.

On December 9, 2010, we commenced a cash tender offer of our outstanding \$500 million 85/8 percent senior subordinated notes due in 2014 and a consent solicitation to amend the indenture governing these notes. The consent solicitation expired on December 22, 2010 and the cash tender offer expired on January 6, 2011. On December 23, 2010, we issued \$500 million of 67/8 percent senior notes due December 15, 2020. The net proceeds of this transaction, together with cash and available liquidity, was used to finance the purchase of our 85/8 percent senior subordinated notes pursuant to the tender offer at a price of 103.25 percent of the principal amount, plus accrued and unpaid interest for holders who tendered prior to the expiration of the consent solicitation, and 100.25 percent of the principal amount, plus accrued and unpaid interest, for other participants. On January 7, 2011, we redeemed all remaining senior subordinated notes that were not previously tendered, at a price of 102.875 percent of the principal amount, plus accrued and unpaid interest. To facilitate these transactions, we amended our senior credit agreement to permit us to refinance our senior subordinated notes with new senior unsecured notes. We did not incur any fee in connection with this amendment. The new notes are general senior obligations of Tenneco Inc. and are not secured by assets of Tenneco Inc. or the guarantors. We recorded \$20 million of pre-tax charges in December 2010 and expect to record an additional \$1 million of pre-tax charges in the first quarter of 2011 related to our repurchase and redemption of our 85/8 percent senior subordinated notes.

On August 3, 2010 we issued \$225 million of 73/4 percent senior notes due August 15, 2018 in a private offering. The net proceeds of this transaction, together with cash and available liquidity, was used to finance the redemption of our 101/4 percent senior secured notes due in 2013. We called the senior secured notes for redemption on August 3, 2010, and completed the redemption on September 2, 2010 at a price of 101.708 percent of the principal amount, plus accrued and unpaid interest. We recorded \$5 million of expense related to our redemption of our 101/4 percent senior secured notes in the third quarter of 2010. The new notes are general senior obligations of Tenneco Inc. and are not secured by assets of Tenneco Inc. or the guarantors.

*Senior Credit Facility Interest Rates and Fees.* Borrowings and letters of credit issued under the senior credit facility bear interest at an annual rate equal to, at our option, either (i) the London Interbank Offered Rate plus a margin as set forth in the table below; or (ii) a rate consisting of the greater of the

**Table of Contents****TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

JPMorgan Chase prime rate, the Federal Funds rate plus 50 basis points or the Eurodollar Rate plus 100 basis points, plus a margin as set forth in the table below:

*Senior Credit Facility Other Terms and Conditions.* Our senior credit facility requires that we maintain financial ratios equal to or better than the following consolidated net leverage ratio (consolidated indebtedness net of cash divided by consolidated EBITDA, as defined in the senior credit facility agreement), and consolidated interest coverage ratio (consolidated EBITDA divided by consolidated interest expense, as defined under the senior credit facility agreement) at the end of each period indicated. Failure to maintain these ratios will result in a default under our senior credit facility. The financial ratios required under the amended and restated senior credit facility and, the actual ratios we achieved for four quarters of 2010, are as follows:

		<b>Quarter Ended</b>							
		<b>March 31,</b>		<b>June 30,</b>		<b>September 30,</b>		<b>December 31,</b>	
		<b>2010</b>		<b>2010</b>		<b>2010</b>		<b>2010</b>

**Table of Contents****TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

The financial ratios required under the senior credit facility for 2011 and beyond are set forth below.

<b>Period Ending</b>	<b>Leverage Ratio</b>	<b>Interest Coverage Ratio</b>
March 31, 2011	4.00	2.55
June 30, 2011	3.75	2.55
September 30, 2011	3.50	2.55
December 31, 2011	3.50	2.55
Each quarter thereafter	3.50	2.75

The covenants in our senior credit facility agreement generally prohibit us from repaying or refinancing our senior notes. So long as no default existed, we would, however, under our senior credit facility agreement, be permitted to repay or refinance our senior notes: (i) with the net cash proceeds of incremental facilities and permitted refinancing indebtedness (as defined in the senior credit facility agreement); (ii) with the net cash proceeds from the sale of shares of our common stock; (iii) in exchange for permitted refinancing indebtedness or in exchange for shares of our common stock; (iv) with the net cash proceeds of any new senior or subordinated unsecured indebtedness; (v) with the proceeds of revolving credit loans (as defined in the senior credit facility agreement); (vi) with the cash generated by the operations of the company; and (vii) in an amount equal to the sum of (A) the net cash proceeds of qualified stock issued by the Company after March 16, 2007, plus (B) the portion of annual excess cash flow (beginning with excess cash flow for fiscal year 2010) not required to be applied to payment of the credit facilities and which is not used for other purposes, provided that the aggregate principal amount of senior notes purchased and cancelled or redeemed pursuant to clauses (v), (vi) and (vii), is capped as follows based on the pro forma consolidated leverage ratio after giving effect to such purchase, cancellation or redemption:

<b>Proforma Consolidated Leverage Ratio</b>	<b>Aggregate Senior Note Maximum Amount (Millions)</b>
Greater than or equal to 3.0x	\$ 20
Greater than or equal to 2.5x	\$ 100
Less than 2.5x	\$ 125

Although the senior credit facility agreement would permit us to repay or refinance our senior notes under the conditions described above, any repayment or refinancing of our outstanding notes would be subject to market conditions and either the voluntary participation of noteholders or our ability to redeem the notes under the terms of the applicable note indenture. For example, while the senior credit agreement would allow us to repay our outstanding notes via a direct exchange of the notes for either permitted refinancing indebtedness or for shares of our common stock, we do not, under the terms of the agreements governing our outstanding notes, have the right to refinance the notes via any type of direct exchange.

The senior credit facility agreement also contains other restrictions on our operations that are customary for similar facilities, including limitations on: (i) incurring additional liens; (ii) sale and leaseback transactions (except for the permitted transactions as described in the senior credit facility agreement); (iii) liquidations and dissolutions; (iv) incurring additional indebtedness or guarantees; (v) investments and acquisitions; (vi) dividends and share repurchases; (vii) mergers and consolidations; and (viii) refinancing of the senior notes. Compliance with these requirements and restrictions is a condition for any incremental borrowings under the senior credit facility agreement and failure to meet these requirements enables the lenders to require repayment of any outstanding loans. As of December 31, 2010, we were in compliance with all the financial covenants and operational restrictions of the facility. Our senior credit facility does not contain any terms that could accelerate payment of the facility or affect pricing under the facility as a result of a credit rating agency downgrade.

**Table of Contents****TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

*Senior and Subordinated Notes.* As of December 31, 2010, our outstanding debt also includes \$20 million of 85/8 percent senior subordinated notes due January 7, 2011, \$250 million of 81/8 percent senior notes due November 15, 2015, \$225 million of 73/4 percent senior notes due August 15, 2018 and \$500 million of 67/8 percent senior notes due December 15, 2020. Under the indentures governing the notes, we are permitted to redeem some or all of the remaining senior notes at any time after November 15, 2011 in the case of the senior notes due 2015, August 14, 2014 in the case of the senior notes due 2018, and December 15, 2015 in the case of senior notes due 2020. On January 7, 2011, we redeemed all remaining senior subordinated notes at a price of 102.875 percent of principal amount plus accrued and unpaid interest. If we sell certain of our assets or experience specified kinds of changes in control, we must offer to repurchase the notes. Under the indentures governing the notes, we are permitted to redeem up to 35 percent of the senior notes due 2018, with the proceeds of certain equity offerings completed before August 13, 2013 and up to 35 percent of the senior notes due 2020, with the proceeds of certain equity offerings completed before December 15, 2013.

Our senior notes require that, as a condition precedent to incurring certain types of indebtedness not otherwise permitted, our consolidated fixed charge coverage ratio, as calculated on a pro forma basis, be greater than 2.00. The indentures also contain restrictions on our operations, including limitations on: (i) incurring additional indebtedness or liens; (ii) dividends; (iii) distributions and stock repurchases; (iv) investments; (v) asset sales and (vi) mergers and consolidations. Subject to limited exceptions, all of our existing and future material domestic wholly owned subsidiaries fully and unconditionally guarantee these notes on a joint and several basis. There are no significant restrictions on the ability of the subsidiaries that have guaranteed these notes to make distributions to us. As of December 31, 2010, we were in compliance with the covenants and restrictions of these indentures.

*Accounts Receivable Securitization.* We also securitize some of our accounts receivable on a limited recourse basis in North America and Europe. As servicer under these accounts receivable securitization programs, we are responsible for performing all accounts receivable administration functions for these securitized financial assets including collections and processing of customer invoice adjustments. In North America, we have an accounts receivable securitization program with three commercial banks. We securitize original equipment and aftermarket receivables on a daily basis under the bank program. We had no outstanding third party investments in our securitized accounts receivable bank program as of December 31, 2010 and \$62 million at December 31, 2009. In February 2010, the North American program was amended and extended to February 18, 2011, at a maximum facility size of \$100 million. As part of this renewal, the margin we pay to our banks decreased. In March 2010, the North American program was further amended to extend the revolving terms of the program to March 25, 2011, add an additional bank and increase the available financing under the facility by \$10 million to a new maximum of \$110 million. In addition, we added a second priority facility to the North American program, which provides up to an additional \$40 million of financing against accounts receivable generated in the U.S. or Canada that would otherwise be ineligible under the existing securitization facility. This new second priority facility also expires on March 25, 2011, and is subordinated to the existing securitization facility.

Each facility contains customary covenants for financings of this type, including restrictions related to liens, payments, mergers or consolidation and amendments to the agreements underlying the receivables pool. Further, each facility may be terminated upon the occurrence of customary events (with customary grace periods, if applicable), including breaches of covenants, failure to maintain certain financial ratios, inaccuracies of representations and warranties, bankruptcy and insolvency events, certain changes in the rate of default or delinquency of the receivables, a change of control and the entry or other enforcement of material judgments. In addition, each facility contains cross-default provisions, where the facility could be terminated in the event of non-payment of other material

indebtedness when due and any other event which permits the acceleration of the maturity of material indebtedness.

**Table of Contents****TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

We also securitize receivables in our European operations with regional banks in Europe. The amount of outstanding third party investments in our securitized accounts receivable in Europe was \$91 million and \$75 million at December 31, 2010 and December 31, 2009, respectively. The arrangements to securitize receivables in Europe are provided under seven separate facilities provided by various financial institutions in each of the foreign jurisdictions. The commitments for these arrangements are generally for one year, but some may be cancelled with notice 90 days prior to renewal. In some instances, the arrangement provides for cancellation by the applicable financial institution at any time upon 15 days, or less, notification.

If we were not able to securitize receivables under either the North American or European securitization programs, our borrowings under our revolving credit agreements might increase. These accounts receivable securitization programs provide us with access to cash at costs that are generally favorable to alternative sources of financing, and allow us to reduce borrowings under our revolving credit agreements.

We adopted the amended accounting guidance under ASC Topic 860, Accounting for Transfers of Financial Assets effective January 1, 2010. Prior to the adoption of this new guidance, we accounted for activities under our North American and European accounts receivable securitization programs as sales of financial assets to our banks. The new accounting guidance changed the conditions that must be met for the transfer of financial assets to be accounted for as a sale. The new guidance adds additional conditions that must be satisfied for transfers of financial assets to be accounted for as sales when the transferor has not transferred the entire original financial asset, including the requirement that no partial interest holder have rights in the transferred asset that are subordinate to the rights of other partial interest holders. In our North American accounts receivable securitization programs we transfer a partial interest in a pool of receivables and the interest that we retain is subordinate to the transferred interest. Accordingly, beginning January 1, 2010, we account for our North American securitization program as a secured borrowing. In our European programs we transfer accounts receivables in their entirety to the acquiring entities and satisfy all of the conditions established under amended ASC Topic 860 to report the transfer of financial assets in their entirety as a sale. The fair value of assets received as proceeds in exchange for the transfer of accounts receivable under our European securitization programs approximates the fair value of such receivables. We recognized \$4 million in interest expense in 2010 relating to our North American securitization program which effective January 1, 2010, is accounted for as a secured borrowing arrangement under the amended accounting guidance for transfers of financial assets. In addition, we recognized a loss of \$3 million, \$9 million and \$10 million for the years ended 2010, 2009 and 2008, respectively, on the sale of trade accounts receivable in both the North American and European accounts receivable securitization programs, representing the discount from book values at which these receivables were sold to our banks. The discount rate varies based on funding costs incurred by our banks, which averaged approximately four percent during 2010.

The impact of the new accounting rules on our consolidated financial statements includes an increase of \$4 million in interest expense and a corresponding decrease in loss on sale of receivables on our income statement in 2010. In 2010, there was no cash flow impact as a result of the new accounting rules. Funding levels provided by our European securitization programs continue to be reflected as a change in receivables and included in net cash provided (used) by operating activities as under the previous accounting rules. Had the new accounting rules been in effect prior to 2010, reported receivables and short-term debt would both have been \$62 million higher as of December 31, 2009. The loss on sale of receivables would have been \$5 million lower, offset by a corresponding \$5 million increase to interest expense for 2009. The loss on sales of receivables would have been \$4 million lower, offset by a corresponding \$4

million increase to interest expense for 2008. Additionally, our cash provided (used) by operations would have decreased by \$62 million with a corresponding increase in cash provided by financing activities for the same amount for 2009.

## TENNECO INC.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

**6. Financial Instruments**

The carrying and estimated fair values of our financial instruments by class at December 31, 2010 and 2009 were as follows:

	December 31, 2010		December 31, 2009	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
				(Millions)
Long-term debt (including current maturities)	\$ 1,162	\$ 1,201	\$ 1,151	\$ 1,168
Instruments with off-balance sheet risk:				
Foreign exchange forward contracts	2	2	2	2

*Asset and Liability Instruments* The fair value of cash and cash equivalents, short and long-term receivables, accounts payable, and short-term debt was considered to be the same as or was not determined to be materially different from their carrying amount.

*Long-term Debt* The fair value of our public fixed rate senior and senior subordinated notes (\$20 million remaining principal balance was redeemed on January 7, 2011) is based on quoted market prices. The fair value of our private borrowings under our senior credit facility and other long-term debt instruments is based on the market value of debt with similar maturities, interest rates and risk characteristics.

*Foreign Exchange Forward Contracts* We use derivative financial instruments, principally foreign currency forward purchase and sales contracts with terms of less than one year, to hedge our exposure to changes in foreign currency exchange rates. Our primary exposure to changes in foreign currency rates results from intercompany loans made between affiliates to minimize the need for borrowings from third parties. Additionally, we enter into foreign currency forward purchase and sale contracts to mitigate our exposure to changes in exchange rates on certain intercompany and third-party trade receivables and payables. We manage counter-party credit risk by entering into derivative financial instruments with major financial institutions that can be expected to fully perform under the terms of such agreements. We do not enter into derivative financial instruments for speculative purposes. The fair value of our foreign currency forward contracts is based on an internally developed model which incorporates observable inputs including quoted spot rates, forward exchange rates and discounted future expected cash flows utilizing market interest rates with similar quality and maturity characteristics. We record the change in fair value of these foreign exchange forward contracts as part of currency gains (losses) within cost of sales in the consolidated statements of income (loss). The fair value of foreign exchange forward contracts are recorded in prepayments and other current assets or other current liabilities in the consolidated balance sheet. The fair value of our foreign exchange forward contracts, presented on a gross basis by derivative contract at December 31, 2010 and 2009, respectively, was as follows:

Fair Value of Derivative Instruments			
December 31, 2010		December 31, 2009	
Asset	Liability	Asset	Liability

	<b>Derivatives</b>	<b>Derivatives</b>	<b>Total</b>	<b>Derivatives</b>	<b>Derivatives</b>	<b>Total</b>
Foreign exchange forward contracts	\$ 2	\$	\$ 2	\$ 3	\$ 1	\$ 2

103

---

**Table of Contents****TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

The fair value of our recurring financial assets and liabilities at December 31, 2010 and 2009, respectively, are as follows:

	December 31, 2010			December 31, 2009		
	Level 1	Level 2	Level 3	Level 1	Level 2	Level 3
	(Millions)					
<b>Financial Assets:</b>						
Foreign exchange forward contracts	n/a	\$2	n/a	n/a	\$2	n/a
<b>Financial Liabilities:</b>						
Foreign exchange forward contracts	n/a	\$	n/a	n/a	\$	n/a

The fair value hierarchy definition prioritizes the inputs used in measuring fair value into the following levels:

- Level 1* Quoted prices in active markets for identical assets or liabilities.
- Level 2* Inputs, other than quoted prices in active markets, that are observable either directly or indirectly.
- Level 3* Unobservable inputs based on our own assumptions.

The following table summarizes by major currency the notional amounts for foreign currency forward purchase and sale contracts as of December 31, 2010 (all of which mature no later than March 31, 2011):

		Notional Amount In Foreign Currency (Millions)
Australian dollars	Purchase	1
British pounds	Purchase	10
	Sell	(8)
European euro	Sell	(15)
	Purchase	217
South African rand	Sell	(41)
	Purchase	2
U.S. dollars	Sell	(18)
	Purchase	652
Other	Sell	(1)

*Financial Guarantees* We have from time to time issued guarantees for the performance of obligations by some of our subsidiaries, and some of our subsidiaries have guaranteed our debt. All of our existing and future material domestic wholly-owned subsidiaries fully and unconditionally guarantee our senior credit facility, our senior notes and our senior subordinated notes (\$20 million remaining principal balance was redeemed on January 7, 2011) on a joint and several basis. The arrangement for the senior credit facility is also secured by first-priority liens on

substantially all our domestic assets and pledges of up to 66 percent of the stock of certain first-tier foreign subsidiaries. No assets or capital stock of our direct or indirect foreign subsidiaries secure these notes. For additional information, refer to Note 13 of the consolidated financial statements of Tenneco Inc., where we present the Supplemental Guarantor Condensed Consolidating Financial Statements.

We have issued guarantees through letters of credit in connection with some obligations of our affiliates. As of December 31, 2010, we have guaranteed \$53 million in letters of credit to support some of our subsidiaries' insurance arrangements, foreign employee benefit programs, environmental remediation activities and cash management and capital requirements.

**Table of Contents****TENNECO INC.****NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

*Negotiable Financial Instruments* One of our European subsidiaries receives payment from one of its OE customers whereby the accounts receivable are satisfied through the delivery of negotiable financial instruments. We may collect these financial instruments before their maturity date by either selling them at a discount or using them to satisfy accounts receivable that have previously been sold to a European bank. Any of these financial instruments which are not sold are classified as other current assets as they do not meet our definition of cash equivalents. The amount of these financial instruments that was collected before their maturity date and sold at a discount totaled \$6 million as of December 31, 2010, and \$5 million as of December 31, 2009, respectively. No negotiable financial instruments were held by our European subsidiary as of December 31, 2010 or 2009, respectively.

In certain instances several of our Chinese subsidiaries receive payment from OE customers and satisfy vendor payments through the receipt and delivery of negotiable financial instruments. Financial instruments used to satisfy vendor payables and not redeemed totaled \$8 million and \$15 million at December 31, 2010 and 2009, respectively, and were classified as notes payable. Financial instruments received from OE customers and not redeemed totaled \$11 million and \$15 million at December 31, 2010 and 2009, respectively. We classify financial instruments received from our OE customers as other current assets if issued by a financial institution of our customers or as customer notes and accounts, net if issued by our customer. We classified \$11 million and \$15 million in other current assets at December 31, 2010 and 2009, respectively. Some of our Chinese subsidiaries that issue their own negotiable financial instruments to pay vendors are required to maintain a cash balance if they exceed certain credit limits with the financial institution that guarantees those financial instruments. A restricted cash balance was not required at those Chinese subsidiaries at December 31, 2010 and 2009, respectively.

The negotiable financial instruments received by one of our European subsidiaries and some of our Chinese subsidiaries are checks drawn by our OE customers and guaranteed by their banks that are payable at a future date. The use of these instruments for payment follows local commercial practice. Because negotiable financial instruments are financial obligations of our customers and are guaranteed by our customers' banks, we believe they represent a lower financial risk than the outstanding accounts receivable that they satisfy which are not guaranteed by a bank.

**7. Income Taxes**

The domestic and foreign components of our income before income taxes and noncontrolling interests are as follows:

	<b>Year Ended December 31,</b>		
	<b>2010</b>	<b>2009</b>	<b>2008</b>
	<b>(Millions)</b>		
U.S. income (loss) before income taxes	\$ (45)	\$ (118)	\$ (257)
Foreign income before income taxes	177	77	141
Income (loss) before income taxes and noncontrolling interests	\$ 132	\$ (41)	\$ (116)
